FERNS

THE VICTORY FERN (*Nephrolepis victoria*)

We take pleasure in offering this new and valuable variety of *Nephrolepis*. It is a beautifully crested form of "Teddy, Jr." with fronds frequently subdivided on the ends, making a most unique, distinct, and desirable variety.

This fern was

AWARDED A BRONZE MEDAL

at the S. A. F. Convention at Detroit in August, 1919. The judges of the award reported as follows: "Special stress is laid on the new fern Victory, with a rapid growth and a branching at end of fronds, making it a shapely plant. It should be a commercial success, and we **RECOMMEND IT MOST HIGHLY.**"

Strong plants, 2½-inch pots....\$3.00 per dozen, \$20.00 per 100
Strong plants, 3½-inch pots.... 7.50 per dozen, 50.00 per 100

NATIONAL PUBLICITY CAMPAIGN.

The first special flower day to be featured in the 1920 campaign is St. Valentine's Day, a day for which all possible publicity should be forthcoming. In addition to a page, in colors, in seven magazines, our Promotion Bureau has arranged to supply to florists a pasteur stamp in three colors and of most appropriate design, for use on envelopes, packages, bills, letters and other material issuing from florists' establishments. These pasters are available for immediate shipment and a liberal use of them will help to impress the public with the suggestion that they "Say it with Flowers" on St. Valentine's Day. Clubs and other organizations can arrange to buy these pasteur stamps in quantity, for distribution to their members, and if properly used they furnish a very inexpensive way to advertise this day thoroughly in a community of any size. They will be supplied on orders to the Secretary, John Young, 1170 Broadway, New York, at the following rates: 500, \$2.00; 1,000, \$3.00; 2,000, \$5.50; 5,000, \$13.00; 10,000, \$25.00; 25,000, \$60.00; 50,000, \$115.00; and 100,000, \$225.00. All orders up to and including 5,000 are mailed postpaid. Above that number they are sent by express, charges collect.

The Billboards.

With the holiday trade out of the way, perhaps many of our friends will now give attention to the matter of billboards. When we think of the great number of florists' establishments presenting available sites for the display of our handsome billboards, we feel sure that the quantity we have arranged for will soon be distributed and doing the work expected of them, conveying our message "Say it with Flowers." Shipments on early orders have already been made, and orders coming in now will be promptly filled. Send to the Secretary for a descriptive circular if not already in possession of one.

Glass Signs.

Nearly one hundred glass signs were shipped from the factory this week. Every florist should display one of these signs, costing only \$2.00 delivered, and connecting, in a way, with our publicity advertising. Decal-

Further Support Urgently Needed.

This is the time when good resolutions are made. If you have not yet subscribed to the Publicity Fund, it would be a graceful act on your part to begin the year with a subscription—graceful to yourself, as well as to the Publicity Committee, who have taken so much upon their shoulders in forwarding the work which has meant so much for the whole trade. Every florist who withholds his support to the campaign holds back also the work. The committee, necessarily, must plan arrangements for publicity a considerable time in advance, and they cannot enter into contracts blindly; they must know that they will have the money to meet their obligations when due.

The florists no longer have "hard times" to contend with, our campaign has helped wonderfully to increase business, and all of us are reaping the benefit.

Right now is the time to show appreciative interest in the campaign work—with a cheque covering a subscription. Subscription blanks and other matter mailed upon application.

GENERAL NEWS NOTES.

The florists of Michigan have formed a state organization with Herbert Goetz, of Saginaw, as president; Henry Smith, of Grand Rapids, vice-president; L. Plum, of Detroit, as secretary; and W. C. Wells, of Ann Arbor, treasurer.

The New York Florists Club have a ladies' night January 12, at the Club's quarters in the Engineering Society's Building.

The Burnham Boiler Corporation of Irvington, N. Y., has been established, with a capital of one million dollars. The incorporators are H. L. Vanderbilt, C. H. Seivert, and O. F. P. Karb.

Samuel Redstone has recently become associated with the Julius Roehrs Co., at Rutherford, N. J.

Fred Fromhold, of Kansas City, Mo., has filed a petition in voluntary bankruptcy, with liabilities of \$7,731 and assets of \$1,240. He was recently in business in the Argyle Building.

George Spear of Emporia, Kans., has sold the Congress street greenhouse to Mr. and Mrs. Frank M. Keeler.

At the last meeting of the Reading, Pa., Florists' Association the following officers were elected: President, H. C. Huesman; vice-president, Jacob C.

Bauder; secretary and treasurer, Wilbert N. Abel.

The Oakville, Ont., Gardeners' and Florists' Association has elected Fred Carr, president, and D. O. Cameron, secretary.

Percy Steele, formerly with Osterman & Steele, has taken over the flower shop at 418 Main street, Springfield, Mass., formerly conducted by Harriet Higgins.

Fire which started around the chimney in the building housing the boiler used to heat the three large greenhouses of the Northway Floral Co. at Keene, N. H., practically destroyed the building and caused a damage estimated at about \$2,000. The fire started at about 7 o'clock in the morning and it required about two hours' work by the firemen to keep the fire confined to the building it started in. The breaking of many panes of glass in the greenhouses caused much loss by freezing.

DECISION IN WELCH CASE.

Ellen M. Welch and her son, Andrew W. Welch of Hartford, Conn., are restrained in a decision filed by Judge Keeler in the Superior Court from using the name of Welch alone in advertising their floral business in the Allyn House building on Trumbull street. The temporary injunction is

issued on the application of George F. Lane, former partner of Andrew Welch in and now owner of the business of the firm of Welch the Florist.

In his decision Judge Keeler points out that when Lane bought out the business he was forced to pay a large price for it, and that in using the name Welch alone the Welches are coming as close to infringing upon the trade name and trademark of Lane's business as they can without adopting the name in its entirety. He rules that if the name Welch is used it should be used with first names or initials as prominent and in as large type as the name Welch.—Hartford Post.

COMING MEETINGS AND EXHIBITIONS.

Boston, Mass.—Mass. Union Farm Meeting, including floricultural displays, etc., at Horticultural Hall, Jan. 19 to 23, under auspices of the State Board of Agriculture.

Chicago, Ill.—American Carnation Society, 29th annual meeting and exhibition, Jan. 21 and 22, 1920. Sec'y A. F. J. Baur, Rockwood avenue and 38th street, Indianapolis, Ind.

New York City—International Flower Show, March 15 to 21, 1920. Sec'y John Young, 1170 Broadway, New York City.

THE TALK OF THE TRADE

The grower who intends to have pot roses for Easter is busy now in preparing his stock, and that grower who has any quantity to work on is fortunate as indications are strong for a short supply of ramblers, hybrids and polyanthas. In a general way, the hybrid perpetuals and hybrid teas are not such satisfactory pot plants as the rambler type, but there is a place for them. The cost for growing them is not so great and with a wise selection of varieties the grower may reasonably look for good returns. Such varieties as Frau Karl Druschki, Ulrich Brunner, Magna Charta, Mrs. John Laing, Paul Neyron and Gen. Jack are generally satisfactory for forcing purposes. Among the hybrid teas, the Killarneys, Gruss an Teplitz, Jonkheer J. L. Mock, Mrs. Aaron Ward, My Maryland and Radiance may be mentioned as a few of the more dependable sorts. Among the ramblers, Crimson Rambler, Dorothy Perkins and Tausendschoen are the three most satisfactory. There are others that may be done well, but these are the favorites. The dwarf polyantha roses to my mind are the most satisfactory of all pot roses for forcing purposes. Jessie, Orleans, Madam Norbert Levaseur (sometimes called the Baby Rambler), Erna Teschendorff and Phyllis are considered good varieties. Of course, the most important point with all these roses is that the wood be thoroughly ripened before they are started in the forcing house. To get a good set of blooms they must not be given any unreasonable forcing at any time. The cooler they can be grown the better results may be expected, particularly in the way of blooms and keeping qualities. A professional pot plant grower turns out some wonderful specimens from the tall growing ramblers, pyramidal, standard, as well as bush form, and much that will bear upon the effectiveness of the plant is accomplished in beginning by training the flowering wood properly and trim-

ming out the blind wood. As the plants start into vigorous growth, it will become necessary to trim out the heavy growing suckers that come up from the bottom.

For some time back the rose grower was handicapped with a small list of varieties that were satisfactory for forcing, and at the same time profitable sorts. He has now come into a list which gives him more latitude and it is to the advantage of all that we find it possible to choose from such good forcing varieties as the Killarneys, which by the way are gradually fading from sight. Ophelia is probably as popular as any rose on the market, as well as Columbia, Premier, Mrs. Aaron Ward, Sunburst and the new varieties to be introduced this year yet to be tried, but at the same time giving great promise. These are Frank H. Dunlop, Pilgrim, Crusader, Madam Butterfly and others. It is too bad that we can't have a really good, all around satisfactory white rose. No one can find fault with Double White

Killarney when it is right, but there are too many battles to be fought in growing it. In one climate mildew must be combatted at all times, then again during the dark days it is not always possible to get flowers free from a greenish tinge or free from the bull head tendency. Single White is fine in the winter, but in the summer is too thin and off color and for that reason I am waiting patiently for a real good all around white.

Sometimes when I visit my friends who are growing roses in small quantity and trying to handle all crops necessary for the retail trade, I can't help thinking that a great part of the reason for the roses not doing better is lack of water. It is pretty hard to convince a rose grower if he is inclined toward dry treatment that a rose can hardly be over-watered. We all know that we have seen very creditable results from this semi-dry treatment, but taking the matter from all sides I believe that the best average is in favor of water and lots of water for roses. That doesn't mean of course, a soaking for a week or two and then changing off to dry treatment, following again with wet treatment; that would never do, but with good drainage, proper temperature conditions, plenty of water will seldom put a rose grower in wrong.

That reminds me of a grower who had a section man decidedly gun shy when it came to watering a section of roses. This grower tried to get him away from this tendency and finally offered him a very attractive Christmas present if he would demonstrate that by lots of water this section of roses would go backwards. The section man evidently tried to get the Christmas present as he watered steadily and in fact appeared to be trying to over-water that section so that the roses would be injured. He had that privilege and he meant to take advantage of it. The result was an improvement and I am inclined to think that a lot of us could experiment in the same way with satisfactory results. When I think of some of the most successful rose growers in the country and think over soil conditions in their places, it seems almost invariably those places are strong for heavy watering.

Ambition and reward

Discussion, like confession, when free and full, is good for the soul. It seems that the recent editorial in *HORTICULTURE* under the title, "Is Ambition Dead?" was read with considerable interest but has not been entirely approved of in some quarters. Speaking for itself alone, *HORTICULTURE* is always willing to give both sides of any question affecting the trade. We think that was shown in our handling of the billboard subject. We are very willing, therefore, to publish the letter which appears below. In itself it makes a well written article presenting the employees' point of view. We are printing it without further comment but we hope that members of the trade will not let it pass without some further remarks concerning the points brought out. These matters are continually being discussed in private. Why not establish an open forum and get at the facts? Here is the letter:

Seattle, Wash., Dec. 24, 1919.

Editor *HORTICULTURE*.

Dear Sir:—In the issue of Dec. 6th I read an editorial under the title: "Is Ambition Dead?" That the article was written from the employers' point of view is undisputable, and that an answer from the other side of the fence be permitted, will prove a tribute of fair play from your valuable journal.

That the writer of these lines is "one of those young men in the trade," that he in all sincerity wishes to state a few thoughts and facts from his own experience and observations concerning the above question, may in some measure atone for the presumption, that he thus makes himself, the volunteer spokesman for thousands of his fellow-workers.

Is ambition among the employees of the florist trade dead? If so what caused its death?

The life-incentive of ambition is reward. Someone may say: "It is not so, the highest incentive of ambition is service." Is service then the final goal of ambition? No, it is the only right and honorable road, leading to the goal, which is reward. No service is ever rendered without the expectation of reward. This reward may be visioned either in the form of money, a better position, honor or self-satisfaction—the knowledge to have done one's duty, and on the general principle of, that, one good turn deserves another.

Reward—that is the magic word which alone has power to resurrect a dead ambition, to inspire a dull

or slumbering ambition to greater efforts and higher endeavors. That, my fellow craftsmen, is "the lost word" in our craft as far as the employees are concerned—REWARD.

How does our trade compare in regard to working-hours and wages with other trades? We feel that we should have a right to take a great pride in our trade, but under conditions as they have been and are, can we?

A fellow-grower told the writer: "I was ashamed to face an Italian laborer, coming home from his day's work one afternoon, who asked me how many hours I worked a day, and I was afraid he would ask what wages I got."

How in the name of common sense can anybody in the face of such conditions expect to take a pride in their trade?

In your article you suggest the following remedies: To induce employees to subscribe for, and read the trade papers; to have a working-library in each establishment; to bring up subjects related to the trade for discussion; to have the workers become members of the various trade association and clubs.

In regard to the first suggestion, we will come in contact with a rather unpleasant subject; but to be practical, one must treat each condition as it is not, as it ought to be. There is an ever-growing sentiment among the employees of our trade, that they have never received a square deal from the trade press. It has always played its tunes in harmony with the employers' side of every issue, and barked and growled at the "under-dog." When this deplorable condition, this one-sidedness has been fairly adjusted, when the trade press will occasionally open its columns to the interest of the employees, as it now does to the employer, then, but not before, will the road be open for a host of new subscribers, and loyal supporters.

A reference library is a good suggestion. It should have a place in every greenhouse establishment.

Discussions of subjects related to the work of the trade, between the employees are very popular during the lunch hour in the potting shed, but as soon as the foreman or employer appears on the scene the subject is immediately dropped, unless he be a man of a friendly disposition and fair enough not to take advantage of his position in a discussion with his men as a foreman or employer. Otherwise he is the boss, and whatever he says goes, with no chance for any discussion.

To induce the employees to join the employers' club might be possible if the present members could overcome their patronizing airs when "Jones' man" or "Brown's man" appears at their gatherings and social affairs. The idea will no doubt prove impractical from the employers' standpoint. What would be likely to happen to the florist's club, if employees in great numbers should be admitted to membership? The majority rules, and the employees would constitute the majority. Before very long the florists club would be a florist trade-union. It would probably prove wiser if the employers would cease their often practiced policy to throw oil on the fire of discontent by persecuting every effort of the employees to organize themselves, one way or other.

If the employers sincerely wish to find effective remedies, why not act upon the advice, recently given in regard to this case, by some of the most prominent men of our trade?

Respectfully yours

For a just reward for ambitious service,
 SEC'Y FLORISTS AND GARDENERS' UNION,
 Seattle, Wash.

New Chrysanthemums

December Beauty and Other Novelties from Elmer D. Smith & Son.

Elmer D. Smith & Son of Adrian, Mich., submitted blooms of their new chrysanthemum December Beauty to the official examining committee of the American Chrysanthemum Society. A. B. Cartledge, John Westcott and Samuel S. Pennock, at Philadelphia on the 12th inst. December Beauty is a very beautiful white, with faint bluish shading, globular, incurved, seven inches across and five inches deep, long stems three and a half feet. The committee thought very highly of it, and gave it an official rating of 90 per cent commercial, and 88 per cent exhibition. Mr. Smith reported that the flowers commenced to bloom December 10th, which brings it in the Christmas class commercially.

The following is a description of December Beauty as given by the originators:

A massive incurved Japanese much the same in form as a well grown Jeanne Nonin. Growth vigorous, yet short jointed, attaining 3½ feet from June 20th planting. Fully developed December 10th to 15th and supply continues until Christmas and after from the later buds. White with light pink shading, which is more pronounced at the center of the blooms. They may be planted the second or third week of June and grown natural, selecting the late bud which appears in September or planted in June and stopped August 10th to 25th, allowing one or

more breaks to continue. This will produce buds September 30th to October 10th and flowers December 10th to 30th. This variety is so double on the late bud that any attempt to secure them prior to late September will result in mal-formed flowers. Having ample stock of this variety, are offering it at an exceptionally low price for one of such sterling merit.

The Smiths also have several other novelties of great promise. They include the following:

SMITH'S SUBLIME—a pink, maturing early in October. Of a soft, pleasing shade with exceptionally good stem and foliage, has been long and diligently sought. In this variety we believe we have produced the best early pink known. The objectionable magenta seen in the early pinks has been eliminated. Height, medium; 3½ to 4 feet from May planting. Bud should be selected about August 10th to secure double flowers, which fully mature from October 10th to 15th.

SUNRAY—A seedling from Golden Glow, maturing October 18th. Several shades darker than the parent, approaching exhibition size. Requires the same treatment as Golden Glow, namely: avoid young plants becoming pot bound and thus prevent hardening and premature buds. Best bud about July 30th. Height, 3½ feet.

ROSE PERFECTION—A seedling from Chieftain and an improvement,

being brighter and more constant in color. Does not assume the objectionable bluish hue when allowed to remain uncut after full development. Like Chieftain, is an easy propagator, similar in growth and foliage, maturing the first week of November.

SUNBEAM—A seedling from Odesa. Of a brighter shade of yellow, maturing for Thanksgiving and later, and fully double on the late September buds. Avoid the buds in August or the flowers will be mal-formed. We consider September 20th to 30th the best time for their selection. A fine grower with ample stem and perfect foliage. Height, 4½ feet from June 20th planting.

BABY DOLL—The size of Baby, maturing October 25th, of the freest flowering habit. Light yellow with slight bronzy tinge, which disappears when fully developed. The most dwarf of this collection. When potted in June and stopped occasionally will give plants 8 to 10 inches high.

BRIGHT EYES—As the name implies, each flower has a bright eye. As the outside petals unfold they are bluish-white and the unfolded petals showing the reverse side present an orange apricot. This variety is not as free as Baby Doll, but if stopped several times will make excellent pot plants. In perfection about October 25th.

WHITE MIDGET—Of the purest white, somewhat larger than Baby, maturing the first week of November and of dwarf habit.

NEW CHRYSANTHEMUMS FOR 1920

OFFICERS OF THE S. A. F.

Appointment Made by Pres. Miller.

President A. J. Miller of the S. A. F. has made the following appointments for the year 1920:

Turf and Legislature Committee

William F. Gude, Chairman.
James M. H. Johnson, F. R. Pearson,
W. H. S. 1919, J. D. L. S.,
Leonard H. Vaughan, J. K. M. L. Farquhar

Committee on Publicity

George Asmus, Term four five years.
J. Fred Asmus, Term expiring Dec. 31,
1920, in place of Guy French resigned.
Wallace R. Pearson, Term expiring Dec.
31, 1923, in place of Thomas H. Joy re-
signed.

Committee on School Gardens

Benjamin Hammond, Chairman
A. T. De la Mare, Town, Bertermann
Michael Barker, Leonard Barron

Committee on Development of American Products

F. R. Pearson, E. G. Hill
Charles L. Baum

National Flower Show Committee

F. H. Tracy, New York

Washington Representative

William F. Gude

Committee on Nomenclature

(Reappointed)

Prof. E. A. White, Chairman
Dr. N. L. Britton, Prof. H. B. Dörner

Entomologist

Prof. H. C. Irish, St. Louis, Mo.

Botanist

Dr. N. L. Britton, Botanical Gardens, N. Y.

Pathologist

William Martin, New Brunswick, N. J.

The Complete Roster

Following is the complete roster of officers, directors, committeemen, specialists and state vice-presidents for 1920:

Officers

President

Abraham Lincoln Miller, Jamaica, N. Y.

Vice-President

Fred C. W. Brown, Cleveland, O.

Secretary

John Young, 1150 Broadway, New York.

Treasurer

J. J. Hess, Omaha, Neb.

Board of Directors

Term 1919-1921: A. M. Manda,
West Orange, N. J.; Charles E. Critchell,
Cincinnati, O.

Term Expiring 1922—Joseph H. Hill, Rich-
mond, Ind.; C. C. Pollworth, Milwaukee,
Wis.

Term Expiring 1923—P. Knabbe,
Cleveland, O.; Paul R. Klinghorn,
Chicago, Ill.

Chairman, National Flower Show Committee

George Asmus, Chicago, Ill.

Chairman, National Flower Show Committee
George Asmus, Chicago, Ill.

Directors Under Affiliation to Serve One

Philip Breitmeyer, Detroit, Mich., President
Florists' Telegraph Delivery Association.

OBITUARY

W. MARCUS STEPHENSON.

W. Marcus Stephenson, rose grower, Oak Lane, Philadelphia, died on the 27th ult., at his home, 7009 Old York Road, and was buried at St. Paul's Churchyard on the 30th. The funeral was attended by many friends in the florist and gardening line. His father, John Stephenson, was in the florist and landscape line before him and the son continued and enlarged the business. He became especially notable during the last ten or fifteen years as a rose grower and built a large range of up-to-date glass at City Line, especially for that purpose, in addition to his place at Oak Lane. He was highly respected by all who knew him.

Carnation Morning Glow Has Been Sold in the Boston Market for 4 Years

It is there considered a bread and butter Carnation. **The Grower likes it**, because it is free and has no tricks. **The Seller likes it**, because it ships and keeps splendid—and what is best of all—

THE LADIES ADMIRE, AND ALWAYS BUY IT for its fresh, rosy color, just like morning glow. **Morning Glow** is early, free, has a good habit, fine stem and for blooming during the Summer, cannot be beat. While not one of the largest Carnations, it is considered

THE MOST PROFITABLE OF ALL
Cuttings sold by the originator, \$7 per 100, \$65 per 1000

Flowers Under Glass

It has been a busy holiday season, but now the rush is over florists can get down to regular work again. Before the memories of the season have become dim, though, it will be to their advantage to note down all of the important items in connection with their business. It will be of great benefit to them next year in helping to avoid mistakes and in reducing labor.

There seems to be no reason why florists should not go ahead with full confidence; even though prices may come down a little there is certain to be a big market for all that the florists can grow, and in many lines stock is short. Carnation men should be certain to have a good supply of cuttings. It is time also to make rose cuttings. In this connection let it be said that florists are not always careful enough in the plants they use when making cuttings. Only the strongest, heartiest growing plants should be chosen. It doesn't take long for stock to degenerate unless care is exercised in this respect. It really pays to pick out the plants which produce the most flowers and the most perfect blooms, and to use them for wood. There is much more individuality in different plants than is sometimes realized, and it is possible to continually improve on stock by care at the time when cuttings are being made. There are various ways of marking plants which are to be used for cuttings. The one recommended by Arthur Ruzicka is to tie a piece of pasteboard to the top of the stake. Particulars about making cuttings were published under this heading last week.

Roses which were potted up in November must be starting into growth now if they are to be in bloom for Easter. It is very important to get good active root growth before the leaf buds start very much. It is well to have a temperature of from 40 to 45 degrees from ten to twelve days. After that the heat can be increased.

BOSTON'S CHICAGO PARTY.

Framingham, Mass., Dec. 29, 1919.

Dear Sir:—Possibly you would like to make the following announcements regarding the Boston party arrangements to Chicago A. C. S. Convention. Leaving Boston January 19, 2 P. M., South Station, arrive at Chicago January 20, 3 P. M., Illinois Central Station.

Fare one way.....	\$33.05
Section	10.69
Lower berth.....	5.94
Upper berth.....	4.75
Drawing room.....	21.60

All including war tax.

I shall be pleased to make reservation for anyone on receipt of check to cover expense of fare and berth.

Reservation should be procured at once as travel is very heavy and it will be impossible to get accommodation if delayed too long.

S. J. GODDARD.

A NOTEWORTHY CATALOGUE.

The new annual catalogue of W. Atlee Burpee & Co., is very different from the average catalogue and noteworthy in several ways. Discussing the reasons for the arrangement adopted, Mr. Burpee said:

"We are following out our plan of last year of dividing the vegetable seed section into four distinct classes of root crops, eddible seeds, greens and salads, and vegetable fruits. You may have wondered why we did away with the old alphabetical listing. There are two reasons. One is mechanical and the other is from a sales standpoint.

92 Chambers St., New York
Write for our Illustrated Catalog

"In the mechanical make-up of the book we aim of course to get the color plates next to the class of vegetables that they respectively illustrate. For instance, we want the beet plate to be next to the beets which are listed in black and white, and with the great number of inserts that we have in the annual now we found that impossible to do if we continued the old alphabetical arrangement.

"From the sales standpoint it really seems advantageous to get our customers to think of the vegetables in connection with the different classes, or in reference to the purpose for which the vegetable is grown. We feel that we have been successful in slightly increasing the number of varieties purchased, principally due to our group system."

The Burpees are offering two new dahlias this year. One is Golden Rose and the other Lilac Queen. There also are fourteen distinct new varieties of early flowering Spencer sweet peas offered in the annual for 1920 for the first time.

THE NEW YORK HORTICULTURAL AND FLORAL CLUBS.

The Albany Florists' Club has invited the New York Federation of Horticultural Societies and Floral Clubs to be their guests on January 15, 1920. There will be a short business session of the Federation at 3.30 P. M., followed by a lecture by Dr. S. W. Fletcher, of the Pennsylvania State College, on French horticulture. A banquet will be followed by informal after-dinner speaking and a general good time. The affiliated societies are asked to send delegates and thus show the Albany horticulturists that their hospitality is appreciated, and incidentally help advance the horticultural interests in New York State. The Albany florists will "say their welcome with flowers" and a feed. All delegates should report at the store of F. A. Danker by 1 P. M., on Thursday, January 15.

INSTRUCTION IN GARDENING

Practical instruction is offered in vegetable, flower and fruit gardening, greenhouse and nursery practice, together with lectures, laboratory, field and shop work in garden botany, zoology, entomology, and soil science. The course is planned for the education of those who would be superintendents of estates or parks. Students may be admitted at any time. Circulars and other information will be mailed on application.

The New York Botanical Garden
Bronx Park NEW YORK CITY

WHEN FLORISTS ADVERTISE

They Do Not Always Use the Best Copy.

It is safe to say that more advertising has been done by florists the past holiday season than ever before in the history of the trade. It would be exceedingly interesting if the results of this advertising could be analyzed so as to determine just the extent to which it paid. Of course this is impossible, but in looking over the different ads. the writer is impressed with the fact that some of them lacked the persuasive quality which is necessary to attract retail customers. This has been noticeable in several advertisements occupying considerable space and therefore costing a considerable sum of money. On the other hand, some of the smaller advertisements have been so phrased and displayed as to catch the eye and excite the imagination to a greater extent. One ad. that caught the writer's eye as it appeared in the daily paper was put out by the Navlet Co., of San Francisco. It was as follows:

HOLIDAY
PLANTS AND FLOWERS

A gift of flowers or plants is perfectly expressive of the donor's esteem.

Floral gifts combine with beauty and appropriateness. For a plant-loving friend nothing could be more happily selected.

Why not give a pretty plant? A fern? A bouquet?

Telegraph orders carefully taken care of.

CHAS. C. NAVLET CO.

Nurserymen—Seedsmen—Florists
423-27 Market St.,
San Francisco, Calif.

Also 20-22 East San Fernando St.
San Jose, Calif.

It seems to the writer that this advertisement must have sold both flowers and plants. While there is nothing ornate or spectacular about it, it is direct and to the point. It gives the reader reasons why he should buy certain goods, and then informs him that these goods can be obtained at the store of the advertiser.

At about the same time the writer found the advertisement of John J. O'Brien in a Boston paper. This advertisement was about three times the size of the one mentioned, although occupying only a single column. The text read as follows:

Be sure to have your home's Christmas Decoration orders placed in time.

For flowers and festoons, wreaths and garlands are needed to make that festive day complete.

Do not wait until the last minute, but get your orders in well ahead - today, so that we can be certain to have your needs well taken care of.

Remember, too, that we have Xmas flowers or wreaths delivered anywhere in the United States or Canada through our telegraph delivery connection with leading florists everywhere.

On account of the abnormal rush, Xmas wire orders should be placed in advance.

JOHN J. O'BRIEN, Florist,
67 Beacon Street, Cor. Charles Street.
Telephones—Hay. 2009-331.

These paragraphs of course tell their story succinctly and pointedly, but the advertisement, in the writer's opinion, was not a success because of the poor way in which it was displayed. The reading matter was very small and inconspicuous. Nearly half the space was taken up by a cut showing a

young man and woman stepping out from behind a curtain. To be sure there was a holly wreath at the top of the page, but at a casual glance the advertisement might have been that of a department store or a furniture store as well as that of a florist. "Say It With Flowers" was in such fine type that it could scarcely be read, and it was only when the bottom of the advertisement was reached that the florist stood out at all prominently. Here is a case of intrinsically good copy poorly displayed. It may be that Mr. O'Brien was perfectly satisfied with the advertisement, and that it brought him an abundance of business, but speaking in a general way it is important that the eye of the reader should be caught and held by something which will suggest to him the need or desirability of the thing which the advertiser offers.

New Year's Greeting

President Miller's Message to All Members of the S. A. F. & O. H. and Affiliated Bodies

We are all standing together on the old December platform, suitcases in hand and our other baggage checked, waiting for the 1920 express. We hear the warning screech of the locomotive whistle around the curve. The train draws in, on schedule to a second.

Old Father Time, the one train dispatcher who is always on the job, no matter what the weather may be, swings his dim lantern; Experience, the only conductor in whom we may with safety place our confidence, shouts "All aboard."

We all pile in. There are ample reservations in the popular parlor car, Good Luck, and there's a well stocked dining car forward. Caution, the brakeman, closes the gates. Again the whistle screeches and we are off, Hope, the headlight, blazing the way into January.

Well, how do things look for a successful journey? Our last year's trip on the 1919 wasn't so bad after all. Here and there for one reason or another there was a slow down but we didn't jump the track or have a collision and we got in on time.

In extending the season's compliments to our beloved society and affiliated organizations, my best wishes go to each and every one. To the dear ladies of our sister society I extend my hearty greetings. May God spare them to continue the good work of making our annual gatherings more pleasant by their inspiring presence. I hope and believe that the 1920 Express will carry us all safely through and that we will be happier and more prosperous at the end of the run than ever.

We have reason to congratulate ourselves at this time, fellow members. The good old U. S. A. stands out on the world map bigger than ever, more patriotic than ever. After a rest-up, following the end of the war, we have taken stock and find that prosperity is with us in abundant measure. But our share of it in the New Year will not come with mere wishing. We need to take off our coats, roll up our sleeves and get down to hard work. We have got to go after it.

Our society represents co-operation, thrift and conservation. We owe a great deal to our old leaders. They appreciated these three great qualities and founded our society upon them. Let us strive to continue their good work to make our organization more influential and more representative. In union is strength. All the way from the greenhouse to the retailer there

should be helpful co-operation. Our interests are closely allied. For one to be successful, all must share in the success.

In the year just beginning, there are important matters which are bound to engage our attention, a few of which I want to mention.

While we have great respect for the men who form the membership of the Federal Horticultural Board, we never-

PRESIDENT A. L. MILLER

theless feel that the efficiency of that important body would be materially strengthened, and the best interests not only of the florists but of the public in general served, were practical growers invited to suggest one of their number for appointment on that board. In all fairness to the great and ever developing industry which is represented by our organization, we believe the department should have the official benefit of the ripe experience which comes through continued, direct touch with the various activities in plant propagation and culture.

Encourage recreation and affiliation. "All work and no play makes Jack a dull boy." This particularly applies to the florist who does not affiliate himself with his trade organizations. He misses many opportunities. No man in our profession can afford to be on the outside and no one is too big or too small to become a part of us. We are fortunate to have such an edifying membership and I hope soon to see all the wholesalers, cut flower growers and pot plantsmen enrolled.

Publicity

Support publicity. Our publicity

campaign is only in its infancy and needs to be encouraged. We are indeed favored by having such efficient men to wage this campaign, but we must all join and help in the work. Just imagine what we have accomplished in less than two and a half years. Why, for a few thousands, we have succeeded in flashing our slogan "Say it With Flowers" throughout the United States, yes, throughout the whole civilized world; while other tradesmen and manufacturers, after spending many years of laborious work and incurring exorbitant expenses, have not met with the success we have.

I congratulate myself on having such fine material for State Vice-Presidents, men who willingly give their time to work toward making our society as strong as the rock of Gibraltar.

To the officers I want to say that I feel greatly honored in being elected to serve in this high office, and with their co-operation and that of my fellow members, I will do my utmost to make my administration a success.

I need add only one thing. Let us work in the New Year with a united purpose to carry forward the work committed to our hands. The road lies straight ahead and, as a wise old Arab said years and years ago:—"No man is ever lost on a straight road."

ABRAHAM L. MILLER, Pres.

THE RETIRING PRESIDENT'S MESSAGE.

Greetings to one and all with best wishes for a Happy and Prosperous New Year.

After two very trying years for our predecessors in office, and the trade at large, we were, on January 1, 1919, ushered into office under most auspicious conditions. Demand for florists stock was exceptionally good. Growers and retailers were getting prices worth while, the volume of business was greater than ever before and everybody was well pleased and satisfied.

Now let us make a short review of the why and wherefores. First of all, we had less production at the close of 1918 and beginning of 1919 than we had for some time previous. The many reasons for which, we need not go into detail here. Second, the demand for our product, no doubt, was greater than ever before. Some say on account of the flu epidemic, others say publicity was a large factor. Well let us grant that it was either, or probably both. One thing we must all admit—It was a condition brought about by the supply and demand. Now then,

The Meyer Florists' Green Thread is different from any other make. Every spool contains 2 ounces of actual thread, 16 ounces to a pound. See that you get the Meyer Florists' Green Thread and you will get the very best thread in the world. Don't take any substitutes.

if that is true, and I am sure it is, then we, no doubt have the problem solved. All we have to do is to create a demand sufficient for the supply and we all will be happy. This has been one of the primary aims of the past administration. We tried it through publicity, both national and local. The results, we feel, were very satisfactory for a beginning.

Local co-operative advertising has been initiated into many communities with very satisfactory results. The F. T. D., as an organization and through its individual members, has done some very creditable work along this line. The national publicity contributions are, however, not coming in nearly as well as they should. In order to keep up this great work more activity must come from the yet indifferent class among the trade. There

J. FRED AMMANN

is only one good reason why a florist, be he grower, wholesaler or retailer, should not subscribe, or rather invest, in national publicity. That one reason is "If he does not expect to pay his pledge when due."

A condition already existed where the Publicity Committee had to temporarily borrow funds against outstanding accounts to pay advertising bills promptly. This should not be so, and I want in closing to admonish all subscribers to pay their pledges promptly so the committee can get the benefit of all cash discounts, which amounts to a considerable amount in one season.

Just as a closing word, I want to express my sincere gratitude to all who have had a part in the great stride our society has made the past year. The credit belongs to no one person, least of all to myself. It is due to the efforts

of the various committees, the administration office, the earnest co-operation of our affiliated societies, and the liberal space given to the work by the trade press.

Gentlemen, I thank you one and all from the bottom of my heart for the service you have rendered our beloved society, and for the privilege I have had in having a part with you in moving the grand old S. A. F. & O. H. just a step onward. Now let us all unite in joining heart and hand with the new administration towards a greater goal and higher ideals.

Sincerely yours,

J. FRED AMMANN,
Retiring President.

SEC. YOUNG'S NEW YEAR MESSAGE

To the Members of the S. A. F. and O. H.:

My hearty wishes for a most happy and prosperous New Year are extended to every member of the society. My personal thanks to a large number are also gratefully extended for their liberal support given to the secretary's office in its work during the year just closed.

The society may be congratulated upon entering its thirty-sixth year under most favorable conditions. The growth in membership in 1919 was rather remarkable in comparison with the growth of former years, especially when we consider the fact that general business conditions were going through a period of reconstruction. Most notable has been the large influx of life members, nearly 800 being the total for the year.

Prominent in the work we shall be called upon to do in 1920 will be the continuation of the Publicity Campaign. While little more than half of the \$100,000 fund which our Publicity Committee believed it possible to raise last year materialized, every dollar was expended to advantage, and a marvelous amount of publicity resulted. With conditions vastly better, the fund for this year should be easily raised. The campaign has resulted in a vast amount of benefit to the whole trade, and the value of our slogan "Say It With Flowers," for publicity purposes, is estimated at millions of dollars. We should be untiring in our efforts to cash in on this value during the year.

For the first time the society has a vice-president in every state in the union, and in the territory of Alaska; there are vice-presidents also in most of the Canadian provinces, and in Cuba. Through these appointments the society has both national and inter-

national representation, and is in touch with trade conditions generally.

Only two additional trade organizations have, so far, taken advantage of the affiliation privilege presented under our by-laws—the State Florists' Association of Indiana, and the Illinois State Florists' Association. With the requirements in the way of affiliation made easier, by the amendments to the by-laws passed at the Detroit Convention, it was expected that organizations in the West and South

tion, which represents his interests in emergencies with which he as an individual cannot possibly cope. There is much truth nowadays in the old saying: "United we stand, divided we fall." We should, then, do out utmost to place our society where it ought to be—in the front rank of trade bodies, ready to battle against anything and everything likely to be detrimental to the well-doing of our craft.

JOHN YOUNG, Secy.

1170 Broadway, New York, N. Y.
Dec. 27, 1919.

SALESMANSHIP THAT HELPS BUSINESS

It is related by the Retail Public Ledger that a customer recently entered a drug store and asked for some insect powder. The unthinking clerk immediately piped up in a voice loud enough for all the other customers to hear:

"I suppose you mean bed bug powder. How big a package do you want?"

It is obvious that salesmanship of this kind, if indeed it can be called salesmanship at all, drives customers away from a store instead of attracting them. Perhaps there is no analogy between a drug store and a florist's store, but the illustration is used to show how much depends upon the man who sells the goods. Not long ago the writer entered a store, and when he didn't seem disposed to purchase the high priced stock which the salesman wanted to sell him, the latter immediately seemed to lose all interest in me as a customer, with the result that I walked out and placed my order elsewhere. It is safe to say that the proprietor would never have tolerated such an exhibition of poor judgment if he had witnessed the scene. If stock of the cheaper grades is offered, it is apparent that the store expects to sell it.

The good salesman is the one who can dispose of the most profitable goods when the occasion is right, but who also knows how to frame his

policy so as to gradually go down the line until he meets the customer's desires or the price he can pay. He must offer the lower priced article, too, with as much interest and good will as though he were selling the highest priced article in the store. A single sale is a minor matter, after all. It is the sale which brings other sales and thus starts a chain which may go on increasing its length for years which counts. The customer who is pleased invariably comes back and it is human nature for him to bring his friends with him. Many a business has been given a good start through the courtesy and wise dealings of the owner as long as he could meet his customers himself, but has ceased to flourish when it became necessary to depend upon hired help. I know of several stores where it would be of the greatest benefit to the owner or manager if he would get his help together in a corner two or three times a week and give them a lesson in dealing with customers.

Perhaps the principles outlined here are of more importance in a retail florist's establishment than in many other lines, for the sale of a single carnation, if made by a clerk with a happy smile and a cordial manner, may mean a wedding or funeral order running into large figures the very next week. Salesmanship is becoming such a science that the storekeeper who does not note its significance is certain to fall behind the procession. One large concern has issued a Better Business Bulletin, in which the following rules of conduct for retail salesmen are outlined. They are worth the study of every florist who employs help, and it would be well if they could be put into the hands of every clerk in such a store, with the statement that the principles outlined must be made henceforth a part of the store's policy.

"Why not consider them as guests in your store?"

"Let yours be a typical 'shine shop' where courtesy rules. Customers will respond to the feeling of your store

SECRETARY JOHN YOUNG

would make efforts to secure representation upon our Executive Board.

This year the annual convention is to be held in Cleveland, the dates August 17, 18 and 19. It is not too soon to plan to be in attendance. There is much to be seen in and around Cleveland of interest to florists, and it goes without saying that visitors will be heartily welcomed by our fellow craftsmen.

Let all of us use our best endeavors to increase the strength of our organization this year. In some states our membership is far behind what we might expect, and, surely, it is to the advantage of every live florist to become a member of his trade organization.

just as guests like the genuine welcome in your home.

"People instinctively knew whether or not you take a genuine interest in their affairs. Instinct tells them whether they are regarded as just so much 'trade;' and you can't blame them for not wanting to buy in a store where there is a 'take-it-or-leave-it' atmosphere.

"Clerks do not have to talk sweet platitudes in order to be courteous. Courtesy is genuine and forced attempts at pleasantry always fall flat. Some men, for instance, have the happy faculty of making an ordinary remark about the weather in a manner and tone of voice that absolutely proves their intention to be polite.

"The clerk or proprietor who fails to learn the philosophy of a smile loses sales that pleasantness would have won.

"Friendship wins friendship. Once your store has achieved the 'sunshine shop' reputation you will find it the best advertisement of all. Friendly store spirit wins friendship for your store that no competitor can undermine.

"There is no place in the business world for a 'grouch' Keep smiling."

PRESENTATION TO SAMUEL ROBINSON

Samuel Robinson, president of the Boston Floral Supply Company, had several reasons to be more than usually happy on Christmas Day. His company had had a remarkably successful season with a promise of continued prosperity in the year to come. That fact made him feel good of course, but in addition Miss Dora Guesser, the floor lady, stepped forward and in behalf of the employees presented Mr. Robinson with a handsome and expensive pair of cuff links and also a beautifully engraved knife bearing the inscription, "To our beloved friend." Miss Guesser made a brief speech, expressing the cordial feelings of the employees, to which Mr. Robinson replied feelingly, heartily thanking his people for their remembrances.

According to reports from Western Pennsylvania, the American Beauty crop is not so large as last year. The Pittsburg Cut Flower Co., says, however, that the quality of Beauties this year is extra good. In the same section of the country growers of sweet peas have suffered no little loss from the continuous dark weather, which has caused the buds to drop off. This condition has also existed to some extent in other parts of the country.

Every Reader of "Horticulture" Needs

DR. L. H. BAILEY'S BRAND NEW Standard Cyclopedia of Horticulture

Six large quarto volumes. More than 3,000 pages. 24 full page exquisite color plates. 96 beautiful full page halftones. More than 4,000 text engravings. 500 Collaborators. Approximately 4,000 genera, 20,000 species and 40,000 plant names

THE New Standard Cyclopedia of Horticulture has been freshly written in the light of the most recent research and experience. It is the fullest, the newest, the most authoritative of all works of its kind and constitutes the most conscientious attempt that has ever been made to compress the whole story of our horticultural thought, learning and achievement into one set of books. It is both an Encyclopedia and a Manual.

A Few of the Many Important New Features

Key to Identification of Plants This is a device to enable one to find the name of a plant. The name thus found is quickly referred to under its alphabetical location, where full information will be found in regard to it.

Synopsis of Plant Kingdom This is one of the most important features of the new edition. It constitutes a general running account of the classes, orders, and groups of plants, with a brief sketch or characterization of 215 of the leading families comprising those that yield practically all the cultivated plants. These family descriptions give the botanical characters; the number of genera and species and the ranges; a list of the important genera; brief statements in regard to the useful plants; and diagrammatic illustrations.

Illustrations There are 24 colored plates; 96 full page halftones; and more than 4,000 engravings which serve as guides in the text.

The Glossary This is an analysis of all technical terms that are used in the work and in similar works. It comprises botanical and horticultural terms with brief definitions.

Translation and Pronunciation of Latin Names In Volume I is inserted a list of between 2,000 and 3,000 Latin words used as species—names of plants, giving the English equivalent or translation and the pronunciation.

Class Articles Special effort has been made to secure the best cultural advices for the plants requiring peculiar or particular handling. Here are some of the titles of these articles: Ants; Autumn Gardening; Bedding; Diseases; Drainage; Floral Designs; Formal Gardening; Hotbeds and Coldframes; Insects; Landscape Gardening; Lawn Planting; Orchards; Rock Gardening; Subtropical Gardening; Tools and Implements; Village Improvements; Window Boxes, etc.

General Index The final volume contains a complete index to the entire work, enabling the reader to locate volume and page of any subject he has in mind.

The complete set of six volumes, bound in decorated buckram, will be delivered to you for only \$3 down and \$3 a month for 11 months, until the full amount of \$36 has been paid. Cash price \$35.

Principles and Practice of Pruning

By M. G. KAINS

Lecturer on Horticulture, Columbia University

Few practices in the handling of plants, especially fruit bearing plants, attract so much interest as do those of pruning. The methods are so varied, the results so diverse, and the opinions of growers so apparently contradictory that this subject is always one of the most interesting, and the surest to hold attention and arouse discussion.

Particularly during the last ten or fifteen years when the principles of plant physiology have been more and more satisfactorily applied to plant production and management has interest settled in pruning. During the latter half of this time also more and more investigations and tests have been conducted by experiment stations and other workers to test out methods and principles in the interest of science and for the benefit of growers. The accumulation of such new knowledge has become very considerable especially in the last decade, but it is necessarily so scattered that very few growers have access to it, hence the demand for a book, which shall present the really important features of these investigations as well as set forth the fundamental principles based upon the laws of plant growth.

This volume is lavishly illustrated mainly by actual photographs of specimens which show good and bad practices. The author has spared neither time nor expense in gathering his photographs, each one of which tells its story.

After a few pages of introduction the author discusses Plant Physiology as related to pruning. A chapter takes up the Philosophy of Pruning, itself a very interesting subject. Then follows a classification and clear discussion of Buds, very fully illustrated from life. How Wounds Heal is an exceedingly interesting chapter, as are also those on Prevention and Repair of Mechanical Injuries, Pruning Nursery Stock, Young Trees, Mature Trees and Odd Methods of Pruning and Training, Rejuvenating Neglected Trees and Practical Tree Surgery.

Profusely illustrated. 400 pages. 5 1/2 x 8 inches.
Cloth. Net, \$2.00.

Plant Propagation, Greenhouse and Nursery Practice

By M. G. KAINS

We have had many inquiries from time to time for a reliable and up-to-date book on plant propagation, but were always at a loss to find any publication that we could recommend. The subject has been dealt with in fragmentary manner only in books that have come to our notice. So it is well that this new work has been issued, especially as it is both comprehensive and practical, and it should meet with a ready sale among plantsmen, nurserymen and gardeners. There are nineteen chapters covering in detail topics of germination and longevity of seeds, propagating by buds, layering, cuttings, grafting, etc., fruit tree stocks, scions, etc., and there are eight pages of condensed cultural instructions in tabulated form, covering annuals and perennials from seed, woody plants, evergreens, vines, bulbs and tubers, greenhouse and house plants, ferns, palms, water plants, orchids and cacti. The illustrations are numerous, comprising 213 figures and halftone plates. There are 322 pages well bound and on heavy paper, teeming with helpful information. It is a book which no cultivator can afford to do without. It is worth many times its price. Copies can be supplied from the office of HORTICULTURE at publisher's price, \$2.00.

FERNS

THE VICTORY FERN (*Nephrolepis victoria*)

We take pleasure in offering this new and valuable variety of *Nephrolepis*. It is a beautifully crested form of "Teddy, Jr." with fronds frequently subdivided on the ends, making a most unique, distinct, and desirable variety.

This fern was

AWARDED A BRONZE MEDAL

at the S. A. F. Convention at Detroit in August, 1919. The judges of the award reported as follows: "Special stress is laid on the new fern Victory, with a rapid growth and a branching at end of fronds, making it a shapely plant. It should be a commercial success, and we **RECOMMEND IT MOST HIGHLY.**"

Strong plants, 2½-inch pots..... \$3.00 per dozen, \$20.00 per 100
Strong plants, 3½-inch pots..... 7.50 per dozen, 50.00 per 100
Extra fine specimens: 8-inch, \$3.00; 10-inch, \$5.00; 12-inch, \$7.50.

NATIONAL PUBLICITY CAMPAIGN.

The Campaign for 1920 opens under very auspicious conditions. The florists' industry is in most satisfactory shape, and complaints as to poor business are rare indeed. The general demand for flowers is running a close race with supply. Our wholesale markets are discharging their heavy loads without signs of gluts in any direction. The horizon of business is clear, and prices were never so remunerative. These conditions have, in the main, prevailed since the opening of the fall season.

Can anyone question that our Publicity Campaign has not had a great deal to do with this? The public think of flowers now as they never did before. Sentiment, which should be a large factor in creating a demand for our products, has been aroused to a remarkable extent, and gifts of flowers are becoming of common occurrence where not long ago they were altogether too rare.

The meaning of our slogan is well understood, and "Say it with Flowers" comes readily to mind at the right time.

The reports covering the Christmas business throughout the country without exception describe the volume as unusually large, and most of it record-breaking in character—and this in spite of, perhaps, the highest prices ever experienced by the public. In many localities it was impossible to obtain sufficient stock to meet the demand. A Western florist in writing our Promotion Bureau intimated that he was prepared to increase his contribution to the Publicity Fund. The demand for flowers was very great, he said, and due, of course, to the Campaign.

Our efforts certainly have been rewarded with success, in measure far greater than could have been anticipated. The predictions of our large band of optimists have been entirely fulfilled, and we are going into the year just opened to us with the feeling of satisfaction that we are not experimenting, we are not taking chances, for we know absolutely that the money we have expended is returning to us with the proverbial hundredfold increase, and much more.

Just think this over, Mr. Non-Subscriber, and ask yourself what you

ELMER D. SMITH & CO.

Adrian, Mich.

have done to deserve your share in this benefit. Don't think we are scolding, but we do want you to think that we need your support to carry along our Campaign. Remember that we have now not only to keep alive the interest already created, but to extend that interest. The more we can spread our propaganda, the greater the benefit to enjoy.

Our slogan, "Say it with Flowers," is worthy of all we can lavish upon it. It cannot be over-popularized—it would mean loss to us as an industry did we not popularize it enough. Help us to keep our publicity going—going all the time, not spasmodically. And do your best to assist the movement personally, in your own vicinity, where you can easily link up with our Campaign announcements to your personal advantage. Drop us a line and we will tell you how.

At the present time, our auditors are going over our finances; therefore, for a week or two we are not able to make a statement as to what our resources will be for the season extending beyond St. Valentine's Day. Every Subscriber to the Fund, however, will, in a few days, receive a notification as to the payment of his 1920 contribution so nobly pledged before hand. For the same reason we are unable, at this time, to announce the exact amount pledged for the 1920 Campaign, but particulars in full will be published in the next issue of this paper.

With the assistance our work deserves, we can make the New Year a banner one for the trade.

GENERAL NEWS NOTES.

The group of florists and seedsmen in the Chicago Association of Commerce have elected the following to the Ways and Means Committee: Chairman, R. B. Howe; vice-chairman, George Asmus; members, John Leonard, Leonard H. Vaughan and Frank M. Johnson.

Joseph E. Koppelman, one of the contracted for a large combination storage and display refrigerator, which will add much to the attractive appearance of his retail store.

Joseph E. Coppelman, one of the large flower growers of East Providence, has purchased a large business block on Custom House street. It is assumed that his wholesale business will eventually be housed there.

C. L. O'Connor, of Pawtucket, has constructed an addition to his greenhouse.

At the meeting of the New York Federation of Horticultural Societies and Floral Clubs as guests of the Albany Florists' Club, January 15, there will be a lecture by Dr. S. W. Fletcher, of Pennsylvania State College, on French Horticulture.

George Parker has been elected president of the Arkansas State Nurserymen's Association. E. H. Balland is secretary.

William P. Hanna, a Cleveland flor-

ist, died at his home, 9621 Union ave., recently, following an illness of seven years. Mr. Hanna was proprietor of a florists' shop in Cleveland for 35 years.

The Curtis greenhouses in Milldale, Conn., which have been famous for many years past for the production of chrysanthemums have this year been devoted to the raising and the culture of cyclamen. In all more than 7,500 of these potted plants have been sold to florists in the large cities.

George Main of Manchester, N. H., who is believed to be the oldest Odd Fellow in the world, had the prestige for a considerable time, according to the Boston Herald, of maintaining the first and only greenhouse in the state of New Hampshire.

A rumor has been going the rounds that Mr. Arthur Cowee of Berlin, N. Y. had sold his gladiolus business to a New York house. Mr. Cowee says that this is a mistake, having its foundation probably in the fact that he had sold to a New York seed house a large block of merchantable stock. He did not, however, include any gladiolus stock.

Prof. J. G. Jack of the Arnold Arboretum is to lecture on new plants before the Newport Horticultural Society, Tuesday evening, Jan. 13th.

TWO MEETINGS CALLED.

By order of President A. L. Miller, a meeting of the Board of Directors is called for Friday, January 23rd, and Saturday, January 24th, at the Hollenden Hotel, Cleveland.

And by order of Henry Penn, Chairman, a meeting of the National Publicity Committee is called for Wednesday, January 21st, and Thursday, January 22nd, at the Hotel La Salle, Chicago.

Members of the Board, and the Publicity Committee, should make their hotel reservations at once.

JOHN YOUNG, Secy.

1170 Broadway, New York, N. Y.

January 5th, 1920.

CLASSIFICATION OF EXHIBITORS.

The Dahlia Society of California places all commercial growers, gardeners, nurserymen, florists or any person hiring a steady gardener in the professional class. Those having business cards and letter heads are also considered professionals.

Semi-professionals are those who do not employ a gardener regularly and who do not make a livelihood from dahlias, but sell or trade dahlias for profit.

Amateurs are those who grow dahlias for pleasure and do not sell or trade for profit.

THE TALK OF THE TRADE

There was a time when the carnation known as Philadelphia was often sold for Ward, but that game cannot be played now, for dealers have become familiar with it. Philadelphia makes a splendid looking flower, but is exceedingly soft, so that it is almost worthless for shipping purposes. It has its uses, however, as I learned the other day when talking with Myron P. Ford, East Weymouth, Mass. Mr. Ford said that he always had some of the Philadelphias coming along and that for local trade and in making up funeral pieces they were very satisfactory indeed. He wouldn't try to ship them, of course, but found them worth growing for a private trade.

Since finding Philadelphia well grown with Mr. Ford, I learn that Mr. Fred C. Hoffman, East Ave., Pawtucket, and Leominster Floral Co. of Leominster, are also growing this variety, and with very good results, for retail trade, and it is proving entirely satisfactory.

Not long ago a prominent carnation man spoke of a grower in Connecticut who was still putting out Thomas W. Lawson and doing well with it, too. This reminded another old timer of the days when the Lawson carnation was introduced. He said that on one occasion Peter Fisher came into his establishment carrying a single specimen of the new carnation in a small box with a glass front. The lid was fastened with lock and key, so precious was the flower considered. The box was to be shipped to a gentleman in the west, and Mr. Fisher was exhibiting the flower before it started on its way. Certainly the appearance of the Thomas W. Lawson marked an epoch in carnation growing. It is seldom that a new variety is so far ahead of other kinds as was the Lawson at the time, and speaking of old varieties, it is particularly interesting to the carnation grower who likes to keep up to date with the old as well as the new to note that Backer & Co. of Billerica are one of the few growers doing Winsor very well. Backer & Co. are always ready to grow the popular varie-

ties if they give the right returns. It only goes to prove that Winsor with them is giving good results or they would not continue growing it.

How many times do we say to ourselves that next year we will avoid the mistakes we have made this year in some particular crop. We are all too apt to make good resolutions to avoid at least partial failures for the coming season, but when the time arrives something else has taken our attention and we forget it. I have in mind particularly now the way the average grower handles his poinsettia stock. How often do we find that when we take the first batch of cuttings that we started the stock plants altogether too late. A great many florists, without thinking what a flexible date they have set, plan to start the old stock plants that are dried off underneath the benches after the Easter rush is over. To my mind that is not a safe plan unless Easter is very early. Why not start the poinsettia stock about the middle of March or the first of April at the latest? If you haven't room on the benches in full light until the Easter stock is out of the way, they certainly can be straightened up along the front edges on the ground, given careful watering and allowed to start with a slow root action and thereby fatten the wood gradually and in a good healthy way. Then as soon as you have the space put the plants on the benches and carry them along in pots if preferred, but to my mind the better way is to plant right into the soil which is not very rich. If you start them this way and above all give them a good early start, you will not need to force them, have a much harder cutting to put into the sand and will get a better percentage from the propagating beds. The very early stock can be cut back, these plants used for larger pots well branched, and the cuttings carried on for later uses.

It is interesting to find that some growers who cut out violets several years ago are growing them again. If you are starting with these flowers, don't make the mistake of giving them too much water at this season. Yet

it is well to remember that the surface soil is sometimes damp when that below is too dry. Moisture close to the roots is what violets like, and even temporary dryness will injure them, besides opening the way for red spider. You will get the best results by keeping the single violets down to about forty degrees night temperature. The doubles on the other hand do best with a temperature of from forty-two to forty-five, for then they open up better. Higher temperature causes trouble by increasing the leaf growth. Green fly is likely to bother but should be fought with tobacco stems or some one of the nicotine preparations such as are advertised in HORTICULTURE rather than by heavy fumigation, which is bad for violets. Nicotine papers apparently can be used with safety, but the most satisfactory way from all points of view to clean out green fly, to say nothing of the more serious trouble, white fly, is by the use of cyanide. Gas fumigation, if properly done, leaves no ill effects and it is particularly important in growing violets to retain their fragrance. This is possible by the use of cyanide. Remember that violets like fresh air and give the house proper ventilation with frequent changes of air.

I don't understand why there isn't more Wallflower grown. It isn't difficult to handle, brings a good average price right through the season, and must be satisfactory to the retail customers as it is an all round flower combining those good qualities such as keeping, fine coloring and spicy fragrance. Mr. Peterson of Framingham brought in the best lot I have seen this season.

HORTICULTURAL CLUB OF BOSTON.

The regular monthly meeting of the Horticulture Club of Boston was held at the Parker House Wednesday night. The principle speaker was E. I. Farrington, editor of HORTICULTURE. President E. H. Wilson was in the chair and the distinguished guests included President Miller of S. A. F. and Mr. Engelmann, the famous carnation grower of England.

Page and half page space, not consecutive, rates on application.

Entered as second-class matter December 8, 1904, at the Post Office at Boston, Mass., under the Act of Congress of March 3, 1897.

Carnations It is pretty hard for growers not to sell all the carnations they can cut when the price climbs to ten, twelve and even to fifteen cents. As a natural result of market conditions, there is an unusual scarcity of cuttings. Of course the growers are looking out for their own stock, but at present they much prefer selling flowers to cuttings and florists who have to buy cuttings find them very hard to get. It does not require much astuteness to see that this presages a short crop later on. From all appearances carnations are going to be good property for a long time.

Billboards Letters about the billboard campaign of the S. A. F. and O. H. continue to come in, but HORTICULTURE feels that it is time to stop the discussion. There will be time for further criticism, if any is needed, after more of the signs have been placed in position. For our part, we believe that the public in general and those in the trade who have been opposed to this form of advertising will be surprised at the care which the florists will exercise in the use of the signs and at the pleasant effects produced. We feel that the florists themselves will avoid anything which is offensive or likely to merit public condemnation. They are too public spirited and too good business men to do otherwise.

American Iris Society There has been some criticism in the English papers about the multiplication of societies on that side of the water. No such difficulty exists here, however, and the new organization to be called the American Iris Society will be welcomed. This society is to be organized at a meeting to be held January 29 in the Museum Building of the New York Botanical Garden, New York City. There seems to be a real need for a society devoted to the Iris, which is keeping pace in popularity with the peony and rose.

One of the important objects of the new organization will be a proper classification of new varieties. At the present time new kinds are being produced in great numbers, but are catalogued and disseminated in a more or less haphazard way. There will always be a place for worth while new varieties, but many of those now being

put out should properly be discarded at the very start. If the American Iris Society is willing to take a leaf from the experience book of the peony growers it will make an early start with test gardens and in this way avoid many of the difficulties which peony lovers have encountered. If these gardens are properly supervised and all new seedlings judged in them by expert committees before they are named and introduced, iris growers and the public in general will be benefited. There should be desirable rewards for novelties of merit, but those which are inferior or closely resemble existing varieties, should be set aside as unworthy of propagation.

It is to be hoped that the new society will issue bulletins and reports containing valuable information. The American Rose Society and the American Peony Society have already shown the value of such publications to growers, both amateurs and professionals. The new society should make itself of great use not only to amateurs and to breeders but to commercial nurserymen as well. It can do this by circulating cultural directions based on experiments in its trial gardens and by stimulating interest in the iris to such an extent that the demand for plants will be greatly increased.

Is Ambition Dead?

Calcium, N. Y., Jan. 5, 1920.

Your editorial under the above heading in your December 6th issue is noted with interest.

No, ambition is not dead, but it is taking a wrong direction, and the remedy is perhaps not as plain as it should be.

Your suggestion to encourage reading is one of the very best that can be made, but it is difficult to interest the rising generation in reading. They are too busy, and time is too much taken up by trying to find some new form of entertainment. If people could only be induced to read it would doubtless solve the problem to a great extent. Any man who does not read the trade literature in his own particular line is surely heading for the discard, and people find this out only when past the time when reading would do them the most good. If young people could be induced to form the reading habit early in life it would go far toward solving the problem presented in your editorial. It matters not so much what they read when young providing it is at least harmless, and so long as they form the reading habit and read regularly. If this habit is kept up until mature years, naturally reading of a more solid and substantial character is taken up and that is where the benefit is derived.

Back of all this is the question of education. In what direction does our present education tend? Does not our present educational system teach the young that if they follow a certain course of study they will be qualified to hold positions that do not require labor? Should not our institutions of education teach primarily the dignity and honor of work, just plain ordinary labor without frills? Should not the primary grades teach children that every person owes it to the world that he should earn his own living? Should not the earning of one's living by some useful pursuit be the first element of good citizenship?

It seems that there is no doubt but what the present tendency of the day is toward demoralization and disintegration. It is to be hoped that the tendency will be checked before too much damage is done.

MADISON COOPER.

IRIS TEST GARDEN.

The New York Botanical Garden, Bronx Park, New York City, will establish next spring an Iris test garden, containing approximately two acres. The Director of the Garden has asked the American Iris Society to co-operate with him in establishing this garden and through his kindness this will become the Society's first test garden. Here there will be a permanent collection of all available species of Iris, and also of all available horticultural varieties to date. A special portion of the garden will be devoted to the testing of unnamed seedlings. Special committees of the Society will conduct various types of work in this garden, and members of the Society will be asked to contribute plants. The situation of the garden is ideal and it will undoubtedly be visited by many thousands of people. The garden will be under the direct charge of Dr. H. A. Gleason, who has been one of the prime movers in the organization of the Iris Society.

It is understood that Iris exhibition gardens have been begun in St. Louis and Minneapolis. As the Society grows older it should co-operate in every way with the directors of these gardens and should endeavor to have a public Iris garden established in every large city. Additional test gardens should also be established in the different climatic sections of the country.

THE BOSTON MARKET.

The market has been easier this week, although there has been no serious break. White carnations have sold as low as 6c., good colored carnations have brought around 12c.; Laddie, which has topped the market, has gone as high as 20c. There has been a decided increase in the number of callas offered, and because of the lack of Easter lillies they have sold readily at 3 and 4c., which growers consider very good. The supply of Stevia, which for a few weeks was overabundant, is now becoming short and it is noticeable that some sweet alyssum is beginning to come in that will help to replace it. Doubtless it will sell better from now on. Freesias are showing up in fair supply and some very excellent wallflowers are coming in, being taken readily. Snapdragons are short and of very poor quality. There is an undersupply of sweet peas, the dark weather having interfered seriously with their growth, making the buds drop badly. Altogether the week has been a good even one for the trade.

Waverley, Mass.

BOSTON.

The next meeting of the Gardeners' and Florists' Club of Boston is to be held on the evening of January 13, a week ahead of the usual date. It will be ladies' night and dancing will follow the serving of a collation. Officers will also be installed at this meeting. Carnation night will come in February, and is expected to be a particularly important event.

Mr. E. Engelmann, a noted carnation grower of Safron Waldron, England, has been visiting growers around Boston the past week, being the guest much of the time of Samuel H. Goddard. Mr. Engelmann expressed himself as much pleased with the houses which he inspected. After leaving Boston he will go to Chicago to attend the annual meeting of the American Carnation Society, January 21 and 22.

Mr. Engelmann himself has between five and six acres of carnations under glass, and ships many carnation plants to Brazil and other South American countries. He says that in Brazil practically all carnations are grown out doors the year through although some glass is now being used to give protection during inclement weather.

A new range of greenhouses has recently been erected for A. R. Tirrell, of Brookline, by the Lord and Burnham Co.

PRES. MILLER IN BOSTON.

The new president of the S. A. F. & O. H., Mr. A. L. Miller, of Jamaica, L. I., has been a visitor in Boston this week, calling on a number of the plant growers. The Horticultural Club of Boston and the Boston Florists' Association were particularly fortunate in having Mr. Miller with them at their meetings.

GROWING ERICAS.

Some of the Fine Points About Handling These Plants.

Hailing for the most part from South Africa, the greenhouse species, hybrids, and varieties of *Ericas*, run to a large number, and in the days of the vogue of hard-wooded plants there were collections of probably nearly fifty varieties, the flowering period of which extended through every month of the year. Such collections, however, are not to be found today outside our leading Botanical Gardens. In commercial establishments where *Ericas* are grown for sale in convenient and serviceable sizes, about a dozen varieties may be said to cover the usual range. These consist chiefly of the kinds that bear their flowers during the winter and spring, when for obvious reasons they are of greater service than during the summer months.

Even from the time of preparation of cuttings, the task of the Heath grower is intricate. Plants must be subjected to a steady heat to induce extension of side shoots, which are heeled off for cuttings when about $\frac{3}{4}$ -inch long. *Ericas* are impatient of heat, and close watch must be kept on the stock plants whilst subjected to it. The compost must also be chosen and prepared with care. A tough fibrous peat, free from greasiness and rotteness must be chosen, and the sharpest and cleanest of silver sand must be freely mixed with the peat. Cuttings need covering with either handlights or the frames of a propagating pit. Very little bottom heat may be given, and the utmost care must always be exercised to keep the compost evenly moist without anything approaching saturation. Daily airing, and wiping the glass to remove condensation of moisture is necessary, and the maintenance of a fresh healthy green must always be observed as a guide to the successful progress of the cuttings. *Ericas* are among the few subjects to which the presence of lime in the soil is fatal, and care must be taken that both soil and water are free from lime.

Firm potting is very essential, and the supply of water, especially after recent potting, and during damp, muggy weather, calls for keen perception and constant care. Ventilation must be ample, for whilst artificial shading is injurious, the sudden rise in temperature resulting from an outburst of spring sunshine, will quickly work havoc. As soon as weather conditions permit *Ericas* should be removed to the open, on a good ash bed.

W. ATLEE BURPEE CO.

Seed Growers

PHILADELPHIA

and here throughout the summer watering must be the grower's chief concern. On a dull morning it may be inadvisable to water at all, but to leave the plants dry even during a dinner-hour's sunshine may result in serious damage. This is particularly so by reason of the necessity to choose an absolutely open spot for the plants. In autumn the thermometer and the clouds must be closely observed, that the correct moment may be chosen for housing the plants for winter.

All this watchful care must be unremittingly bestowed for two years, that being the time required to produce a saleable plant in a 4 in. pot. Pinching or stopping, too, is work for experienced hands. Neglect will result in straggly ungainly plants, whilst too much pinching will result in a confused mass of spindly shoots that will not flower satisfactorily.

These details are the main principles of Erica culture, but it is practice alone that can make a grower proficient. Hence it will be obvious that the subject is essentially one for specialization, and no one can expect good Ericas at low prices. One important point, however, is that when once a well-grown plant reaches the flowering stage, it will stand a deal of wear, will bear a prodigious amount of bloom, and retain full beauty for a long period, so that few subjects can be named which are capable of yielding so good service for room, table, or conservatory decorations.—*Horticultural Trade Journal*.

COMING EXHIBITIONS.

Boston, Jan. 27, 28. New England Nurserymen's Association, Annual Convention, American House.

New York City, Jan. 13, 14. Ornamental Nurserymen's Association, Hotel Biltmore.

AN UNUSUAL CALENDAR.

A calendar which has just been received from the Jerome B. Rice Seed Co. of Cambridge, N. Y., is a decided departure from the usual type. On a white background there appears a large-sized reproduction of Vick's Scarlet Globe Radish which this concern has made famous and to which it devotes many acres each year. It is the purpose of the Rice Company to continue this form of calendar year after year, picturing some worthy type of vegetable each season. If the illustrations are saved after the calendars have served their purpose, they should prove of no little value to seedsmen in picturing the different vegetables to their customers.

Are You Going to Chicago?

On January 21st, the American Carnation Society will meet in Chicago. Preparations are being made to take care of a large attendance. The meeting will be very interesting as well as beneficial. This will give an opportunity for florists to get together and discuss subjects of other importance outside of Carnations.

Chicago hotels are always crowded and we advise you to make reservations in advance by writing to various hotels for reservations. We will be glad to have all your mail addressed in care of our office which is two blocks from the leading hotels of the city and in the heart of the wholesale florists. We will do everything in our power to make your visit a pleasant one.

Hoping to have the pleasure of meeting you.

Yours very truly,

American Bulb Co.

ROSE SEEDS.

One of the greatest rosarians in England states that he has often found that the less double a rose is the more easily it produces seed. This statement was made in connection with the Rose Ophelia which he states

was not produced from artificially fertilized seed, but came from a pod gathered at hazard in the nursery.

Ophelia seems to be very prolific of sports and seedlings. If the parentage of Ophelia could be known beyond question it would be of much interest.

UNUSUAL THINGS ATTRACT ATTENTION.

Have just had the pleasant experience of having a lesson in school again.

Some forty or more business and professional men of Boston have formed a class for the furthering of more knowledge of business science. We have joined the Sheldon School of business science where we meet once in two weeks, have our lunch at our club and then have an hour and a half for the lesson and its discussion and what we don't know about business, well—enough said.

What has this to do with talking publicity. One of the many subjects discussed was the point that applies itself to our National Campaign, that the unusual things you do attract attention and if properly done, it holds your individual attention. Now, here's the point. How have we attracted the individual attention of the millions of readers of national magazines? Have we not carried on for two years a dignified campaign for the use of more flowers, spreading the uses in channels where people who didn't think of flowers for anniversaries, birthdays, holidays, etc. as well as the broader uses of telegraphing of flowers? And hasn't the campaign held attention by reason of its being the first time a national campaign for flowers was started. We were taught in our lesson that favorable attention properly secured, with confidence inspired, ripens into interest—interest properly sustained, changes to appreciation—appreciation, properly augmented

Flowers Under Glass

If you have Poinsettias left over from the holiday trade cut down a few to give stock for next year. Let them almost dry out under a bench and start them into growth in late April or May. Florists who have the facilities for handling them are certain to find Poinsettias a paying crop next Christmas.

Probably sweet pea growers will have better success from now on than they had during the early winter months. The cloudy weather has made it very difficult to get good peas and the buds have dropped badly. Beds can be started now, the seed being preferably sown in double rows. Remember that a sweet pea house requires a great amount of light, a fair amount of head room, and a cool temperature.

Don't try to force the carnations too hard even though prices are most attractive. In the long run you will gain by keeping a night temperature of not over fifty degrees, for then the plants themselves will remain in a strong, healthy condition.

There is no abatement in the popularity of chrysanthemums and there should be a tremendous sale of both plants and flowers next season. Some growers do not start propagating quite so soon, and yet it is not too early to make initial preparations. Indeed, when show plants are to be grown making an early start is of the greatest importance, although this fact is not realized perhaps to the extent it should be. By all means keep your stock plants in the light where they will have a chance to keep in good condition for throwing cuttings. Another mistake is leaving the cuttings too long in the sand, as this causes them to lose stamina. Watch them carefully, and by the time they have developed roots about half an inch long pot them up, with a night temperature running not more than fifty degrees. Don't hesitate to try some of the new varieties. All the new varieties will not prove better than the old, perhaps, but every now and then a big strike is made and it does not do for any enterprising florist to let the procession get ahead of him.

If you are growing hydrangeas and planning them for Easter get them into gentle heat immediately now. Slow, even growing is much better than quick forcing. This is a good time to pot pelargoniums. Be sure that they are well firmed in the pots and put them close to the light, with a night temperature of 55.

INSTRUCTION IN GARDENING

Practical instruction is offered in vegetable, flower and fruit gardening, greenhouse and nursery practice, together with lectures, laboratory, field and shop work in garden botany, zoology, pathology, landscape design, soils, plant chemistry and related subjects.

The curriculum is planned for the education of any persons who would become trained gardeners or fitted to be superintendents of estates or parks. Students may be admitted at any time. Circulars and other information will be mailed on application.

The New York Botanical Garden
Bronx Park NEW YORK CITY

RAMBLING OBSERVATIONS OF A ROVING GARDENER

With the gradual coming of normal conditions there is sure to be a great advance in landscape work. It is known that many estate owners are already planning for improvements on a large scale. In some instances the plans have been drawn and the work is only being postponed until labor costs become somewhat lower. It is to be hoped that greater attention will be given to water gardening, for the opportunities offered for such work have not been taken full advantage of in this country. If water gardening is to be as pleasing and effective as across the water, the details must be carefully thought out. A famous English gardener, R. W. Wallace, in a paper read before a prominent horticultural society, has outlined some of the requirements for making a water garden of the better sort. In part this paper is as follows:

For formal water-gardens the circumstances I should characterize as satisfactory are:

1. A liberal supply of water available, in such a position that it can be turned on or off at will.

2. The pool should form a part of some larger garden scheme, such as a main or central feature in a flower garden, be it devoted to roses or any other plants.

3. It should be in such a position that it can be emptied quickly, and without any undue expenditure of labor, by an outlet valve.

4. It should be of sufficient area to achieve its object, viz. the cultivation of aquatic plants, and deep enough to meet their requirements. Finally, in design it should be obviously part of the garden, not an isolated creation that involves resort to all sorts of extravagance to justify its existence.

An artificial cemented pond or lake of irregular design is not always a pleasing feature, because of the hard outline which is very difficult to hide in a satisfactory manner; again, because of the difficulty in planting moisture-loving and semi-aquatic plants around the edges. Generally speaking, the best effects are obtained by masses of shrubs, generally rhododendrons and azaleas, planted some way from the edge. Of course, in such a piece of water, water lilies may be grown very successfully. It is not generally speaking, worth while to form an artificial piece of water, but

if there is an overflow from some source to be dealt with, and the lay of the land suggests an expanse of water, then the construction is, I think, justified, especially if it comes well into the landscape from the house, and if it is suitably planted it should be an addition to the garden.

Where a water course has been dammed many fine sheets of water have been formed, and this can only be carried out successfully when the surroundings are such that the newly formed sheet of water appears to fit into the landscape naturally. Such water would always be found at the foot of a slope or hill. The planting around such lakes and those that are natural is generally of a bold nature—large masses of rhododendrons and azaleas for summer effect, and scarlet dogwood and golden and crimson-barked willows for winter effect, are typical of much planting which in the past has been generally of an evergreen nature, and therefore rather sombre when the flowering season is over.

Many of the larger-flowering shrubs and trees may be used to advantage, such as viburnums, spiraeas, sambucus, catalpas, magnolias in the moist sheltered corners, liquidamber for autumn effect, *Cercis Sillquastrum* (the Judas Tree), and *Clethra alnifolia* (the Virginia Sweet Pepper bush), flowering in late summer with feathery spikes of sweet scented white flowers.

For a long distance effect the white poplar, when properly grown, is a striking object of July beauty. The effect of a large tree against a dark background is as though it were a mass of burnished silver. The bat willow (*Salix alba coerulea*) is of similar appearance, and of course is worth planting on account of its commercial value.

I will now draw brief attention to some of the bolder-growing herbaceous plants which thrive amongst moist surroundings. Astilbes and Spiraeas form, I think, the most important group we have; easy of growth and increase, free-flowering, they are indispensable during the summer months. The unique crimson color of *S. palmata* is superb, and when well established this species reaches 3 or 4 feet in height. Tall plants of fine statue and superb foliage to be seen from a distance are the

white-flowered *S. gigantea* and its pink variety, and *S. venusta*, with 6 to 8 feet high spikes of soft rosy-pink flowers. These two Spiraeas may be well grouped together with *Gunnera* and *Senecio Clivorum* at some distant point seen across the water, and I might also add *Rheum palmatum* for early effect. The introduction of *Astilbe Davidii* has given rise to a number of hybrid forms partaking of the strength of *A. Davidii*, but with a more subdued range of color.

Astilbe grandis, one of Wilson's Chinese plants, is delightful in its early growth: the ruddy tinted stems covered with hairy growth contrasting effectively with *Trollius* in creamy shades close by. In fact, many of the Astilbes are worth special grouping on account of their foliage in the young state, which acts as a delightful foil to such plants as already mentioned, *Trollius*, *Minulus*, etc. *Bocconias* are fine in foliage and flower, especially when escaping late frosts; so are *Lythrum*s, especially the variety *Rose Queen* and *roseum superbum*, also *Eupatorium purpureum*, a unique and handsome plant, whose fine tall heads of flowers are very effective from a distance. I have noticed a grouping of the *Eupatorium* and *Senecio Clivorum*, and the cream *Artemisia lactiflora* against silver-grey Rosemary-leaved Willows—a charming effect of purple and orange, cream and silver.

So far in these remarks I have omitted all reference to what I think may be called amongst hardy plants the chief glory of the water garden in July, the Japanese Iris (*Iris Kaempferi*).

There is a general desire to grow these fine plants, and having been particularly successful in their cultivation, I may perhaps refer here to what I regard as the main conditions for success. They will do well in any well-worked soil and that which is rich in vegetable matter, but avoid planting in heavy clay by water-side. On meadow pasture land along side ditches and small ponds, planted just above the water line, in soil that has been well dug and manured, they will thrive splendidly and often seed themselves about.

Another point; division after flowering in August is best. You will find in early autumn quantities of new roots pushing, so that by early planting you gain all this new root action. Again, in spring countless fibrous roots are pushed out. Division of the clumps every two or three years is good, and planting in fresh soil, such greedy rooters quickly exhaust their surroundings.

The Meyer Florist Threads can be had in any size or color that is wanted. Can furnish same at \$2.25 per lb. with liberal discounts in case lots of 500 lbs. and upwards. Every spool contains 2 ounces of actual thread, 16 ounces to the pound or no sale. Be sure and get the Meyer Threads and take no other.

SNAPDRAGON RUST

Snapdragon rust (*Puccinia antirrhini*) is apparently an American disease having been first found in California in 1895. Since that time it has spread all over the United States by means of infected snapdragon plants shipped from place to place.

In the past, spraying with Bordeaux mixture or ammoniacal copper carbonate has been recommended to hold the disease in check but experimental work done by Prof. George L. Peltier of the Illinois Agricultural Experiment Station and reported in Bulletin No. 221 of that station proves that the benefits derived from spraying are not sufficient to justify the expense.

The disease attacks all portions of the plants, leaves, branches, stems and even the seed pods, and that all varieties are equally susceptible.

To prevent its spreading among plants already in the greenhouse, do not syringe the plants. The spores are carried from plant to plant in this manner, and also it creates conditions favorable to the germination of the spores. When watering be very careful not to wet the foliage—simply water the earth.

The disease is not carried over on the seed. This affords a method of avoiding trouble. Remove the soil from the greenhouse benches that has grown infected plants, replacing it with soil which has not grown snapdragons for one year or longer. In growing the seedlings be very careful to avoid the use of infected soil. By this manner only can trouble be avoided.

Having produced seedling stock the desirable varieties can be selected and propagated by cuttings. Be very careful not to use infected cuttings because even a very few cuttings in a cutting bench can cause the loss of the entire bench full of cuttings, the grower laying his troubles to "damping off."

Keep the plants clean, and the houses in which they are growing well ventilated. Should the rust show up among the plants burn such plants immediately. With these precautions and the growing of seedlings on clean soil, a reasonably clean and profitable crop can be grown but it will be at the price of eternal vigilance.

PACKING AND SHIPPING CUT FLOWERS.

In no part of the business—for this part is purely a business, unlike the cultivating, which is a profession—is there more need of good sense and judgment, which with constant practice make an expert packer of flowers. In the first place, some men have a knack of handling cut flowers differently from others. They will take up a few dozen roses from the counter and move them or show them off to a customer quickly, but as gently as a mother handles a two-months-old baby, while I have often been annoyed to see others slap them down as if they were a bundle of salt codfish. Every time the soft petals of the rose get a knock or bruise, this of course does not show at once, but it will in a few hours.

It is not the distance they travel. The quick ride in the express car can do little harm; but they get jarred about many times before they are placed on the retailer's counter. The grower may handle them roughly. They get a bump at the local station, another when thrown into the express car; still another jar or two before getting into the express wagon to be delivered at the stores, and if they are going to a commission man their troubles have only begun.

There are, broadly, two rules to observe. Flowers should never be put into a box so crowded that they are actually squeezed, and, what is quite as bad, so loosely that they can shake or move about.

Some years ago it was hard to find a shipment of roses arriving at a retail store packed in any other way but layers. Recently nearly all rose growers are placing twenty-six roses to the bunch with the heads carefully placed together. These are rolled in oil paper, then further rolled in a good quality of manilla with small pieces of ice. The end of the paper is left longer than the stems and carefully folded over to retain the moisture and keep the air away from the stems and ice.

After roses have been prepared in this way the grade, variety and quantity is stamped on the package.

These are placed in wooden shipping boxes about three inches from the ends of the box, and securely fastened with a wooden cross-stick.

Practically all cut flowers should be carefully graded and put in bunches, as we believe this is the best method of grading and packing. It is appreciated by the retailers as it is so easy to check the shipment, as to count and

grade, when it arrives at a busy flower store.

The methods of wrapping outlined could also be used in shipping bulbous stock and possibly carnation, antirrhinum and other blooms. All flowers should be carefully wrapped in oil paper before being placed in the shipping cases and plenty of crushed ice used during the summer months.

Express messengers on the trains should be notified as to the best methods of handling these cases while in transit, to protect the boxes from being carried on end or from being placed in close contact with steam pipes.

If these methods are carefully carried out, flowers should arrive in good condition.—*The Canadian Florist.*

SAY IT WITH FLOWERS

If you have a flower in your garden, or if not, a little surplus cash, take a flower or buy a flower and take it to that poor wretch with a gloom of despair, that you meet. You may brighten his life and you have Said It With Flowers.

When you want to feel cheery at a special meet of your dearie, put a flower in your buttonhole and carry one to her. That is the way the fellow does who wants to Say It With Flowers.

Think of the man or girl in the office who has forgotten to spend a few pennies on a buttonhole bouquet—they are not cheery but weary all the day long. Why did they not Say It With Flowers?

The one who has done it is the sport of his class, no worry is his for he don't care a fizz for the grumpy old grouch as long as his buttonhole is bright, for he has Said It With Flowers.

There will be a little song all the day long to those loving fingers that pinned that sweet boutonier on the coat in the early morn, the wearer of which is awake to the charm of the donor so sweet Saying It With Flowers.

RICHARD VINCENT, JR.

Advertising By Florists

It is encouraging to find that many florists are beginning to realize that advertising is increasing the number of buyers and results in the sale of more flowers is of benefit to the whole trade even though paid for by a single individual. One result of this has been increased willingness to cooperate in a general advertising campaign. After all the benefits of advertising are not a new discovery, although some florists seem to regard them as such. Years ago Gladstone, the great English statesman said:

"It is only a mint that can make money without advertising."

Said P. T. Barnum, the showman: "The road to fortune is through printer's ink."

And more recently John Wanamaker wrote:

"I would as soon do business without clerks as without advertising."

At the same time advertising appropriations are often wasted to a large extent because of the unintelligent manner in which they are expended. It is sometimes curious to find personal egotism cropping out in an ad. It seems occasionally as though an advertiser used the opportunity to write the things about himself which he would like to hear other people say but never does. That sort of thing may tickle the vanity and be worth the money for that reason, yet it may be poor advertising, nevertheless.

One of the best advertisements which we have seen recently in a local paper was that of McKenna, the Florist, of Montreal. It occupied only a single column, but in contrast to Mr. O'Brien's advertisement mentioned last week, it suggested flowers the moment the eye caught it. At the very top was the inscription,

"McKenna's Flower Girl"

in good sized type, just below the picture of the young lady holding a great bunch of chrysanthemums. Alongside this picture, also in good-sized script, was the following text:

"Flowers are a message of cheerfulness and hope."

The rest of the advertisement in ordinary type read as follows:

"Flowers are dispensers of joyfulness. When they grace the family table they help to dissipate the gloom of workaday troubles and make the meal time more enjoyable. When are you going to get acquainted with our floral offerings? They will certainly please you."

The remarkably cumulative value of advertising has recently been brought to the writer's attention in a rather interesting and somewhat personal way. It may be remembered that some weeks ago a particular advertisement put out by Henry Penn of Boston was criticized in these columns because it did not contain Mr. Penn's name or address but simply the illustration of a pen and some such inscription as

"When you think of flowers you think of—"

The criticism was to the effect that many people who read this ad. who might wish to buy flowers would be ignorant of the store in question in spite of the fact that it is now a Boston institution of note. I think the criticism still holds good, but when I picked up a copy of the Retail Public Ledger in Philadelphia, the other day, I found the advertisement reproduced in a news article and with it a little story about Mr. Penn and his store.

Now this particular paper goes to all parts of the country and the chances are good that many people will buy flowers from Penn when they come to Boston as a direct result of reading that story. This of course is something on which Mr. Penn could not have counted in any way, and yet it shows how far reaching advertising is, and how uncertain results may be when they are expected to come exclusively from a certain medium.

BOSTON FLORISTS' ASSOCIATION.

This association held its regular monthly meeting at the Parker House on Tuesday evening, Jan. 6th. Officers for the coming year were elected as follows:

Henry Penn, president; Wm. Elliott, vice-president; Wm. C. Stickel, treasurer; Frank Edgar, financial secretary; E. Gorney, recording secretary.

The evening was spent in a discussion by the growers concerning marketing conditions in general. It was started by Herman Bartsch, representing the plant growers, who told what in his opinion were the desires and needs for better marketing conditions from their point of view. Andrew Christensen and W. C. Stickel presented the arguments for the carnation growers, and William Elliott, chairman of the growers' committee, and E. Allan Peirce spoke for the rose growers. One and all brought out particularly the increase in cost of production. Mr. Stickel thought that this would easily reach 100 per cent, and he could not see why 100 per cent increase in the price of cut flowers at wholesale was unreasonable or excessive.

Mr. Elliott mentioned a few points bearing on the increase in cost of production, placing coal at two or three times pre-war prices, wages at double, boxes, shipping, glass, repairs, pipe and all kinds of hardware at two to three times, and he thought that double pre-war market prices is enough, certainly not too much, and three times the prices of 1913 and 1914 would not be unreasonable.

Every Reader of "Horticulture" Needs
DR. L. H. BAILEY'S BRAND NEW
Standard Cyclopedia of Horticulture

Six large quarto volumes. More than 3,000 pages. 24 full page exquisite color plates. 96 beautiful full page halftones. More than 4,000 text engravings. 500 Collaborators. Approximately 4,000 genera, 20,000 species and 40,000 plant names.

THE New Standard Cyclopedia of Horticulture has been freshly written in the light of the most recent research and experience. It is the fullest, the newest, the most authoritative of all works of its kind and constitutes the most conscientious attempt that has ever been made to compress the whole story of our horticultural thought, learning and achievement into one set of books. It is both an Encyclopedia and a Manual.

A Few of the Many Important New Features

Key to Identification of Plants This is a device to enable one to find the name of a plant. The name thus found is quickly referred to under its alphabetical location, where full information will be found in regard to it.

Synopsis of Plant Kingdom This is one of the most important features of the new edition. It constitutes a general running account of the classes, orders, and groups of plants, with a brief sketch or characterization of 215 of the leading families comprising those that yield practically all the cultivated plants. These family descriptions give the botanical characters; the number of genera and species and the ranges; a list of the important genera; brief statements in regard to the useful plants; and diagrammatic illustrations.

Illustrations There are 24 colored plates; 96 full page halftones; and more than 4,000 engravings which serve as guides in the text.

The Glossary This is an analysis of all technical terms that are used in the work and in similar works. It comprises botanical and horticultural terms with brief definitions.

Translation and Pronunciation of Latin Names In Volume I is inserted a list of between 2,000 and 3,000 Latin words used as species—names of plants, giving the English equivalent or translation and the pronunciation.

Class Articles Special effort has been made to secure the best cultural advices for the plants requiring peculiar or particular handling. Here are some of the titles of these articles: Ants; Autumn Gardening; Bedding; Diseases; Drainage; Floral Designs; Formal Gardening; Hotbeds and Coldframes; Insects; Landscape Gardening; Lawn Planting; Orchards; Rock Gardening; Subtropical Gardening; Tools and Implements; Village Improvements; Window Boxes, etc.

General Index The final volume contains a complete index to the entire work, enabling the reader to locate volume and page of any subject he has in mind.

The complete set of six volumes, bound in decorated buckram, will be delivered to you for only \$3 down and \$3 a month for 11 months, until the full amount of \$36 has been paid. Cash price \$36.

Principles and Practice of Pruning

By M. G. KAINS

Lecturer on Horticulture, Columbia University

Few practices in the handling of plants, especially fruit bearing plants, attract so much interest as do those of pruning. The methods are so varied, the results so diverse, and the opinions of growers so apparently contradictory that this subject is always one of the most interesting, and the surest to hold attention and arouse discussion.

Particularly during the last ten or fifteen years when the principles of plant physiology have been more and more satisfactorily applied to plant production and management has interest settled in pruning. During the latter half of this time also more and more investigations and tests have been conducted by experiment stations and other workers to test out methods and principles in the interest of science and for the benefit of growers. The accumulation of such new knowledge has become very considerable especially in the last decade, but it is necessarily so scattered that very few growers have access to it, hence the demand for a book, which shall present the really important features of these investigations as well as set forth the fundamental principles based upon the laws of plant growth.

This volume is lavishly illustrated mainly by actual photographs of specimens which show good and bad practices. The author has spared neither time nor expense in gathering his photographs, each one of which tells its story.

After a few pages of introduction the author discusses Plant Physiology as related to pruning. A chapter takes up the Philosophy of Pruning, itself a very interesting subject. Then follows a classification and clear discussion of Buds, very fully illustrated from life. How Wounds Heal is an exceedingly interesting chapter, as are also those on Prevention and Repair of Mechanical Injuries, Pruning Nursery Stock, Young Trees, Trees and Odd Methods of Pruning and Training Juvenating Neglected Trees and Practical Tree

Profusely illustrated. 400 pages. 5½ x 8 in.
Cloth. Net, \$2.00.

Plant Propagation, Greenhouse and Nursery Practice

By M. G. KAINS

We have had many inquiries from time to time for a reliable and up-to-date book on plant propagation, but were always at a loss to find any publication that we could recommend. The subject has been dealt with in fragmentary manner only in books that have come to our notice. So it is well that this new work has been issued, especially as it is both comprehensive and practical, and it should meet with a ready sale among plantsmen, nurserymen and gardeners. There are nineteen chapters covering in detail topics of germination and longevity of seeds, propagating by buds, layering, cuttings, grafting, etc., fruit tree stocks, scions, etc., and there are eight pages of condensed cultural instructions in tabulated form, covering annuals and perennials from seed, woody plants, evergreens, vines, bulbs and tubers, greenhouse and house plants, ferns, palms, water plants, orchids and cacti. The illustrations are numerous, comprising 213 figures and halftone plates. There are 322 pages well bound and on heavy paper, teeming with helpful information. It is a book which no cultivator can afford to do without. It is worth many times its price. Copies can be supplied from the office of HORTICULTURE at publisher's price, \$2.00.

FERNS

THE VICTORY FERN (*Nephrolepis victoria*)

We take pleasure in offering this new and valuable variety of *Nephrolepis*. It is a beautifully crested form of "Teddy, Jr." with fronds frequently subdivided on the ends, making a most unique, distinct, and desirable variety.

This fern was

AWARDED A BRONZE MEDAL

at the S. A. F. Convention at Detroit in August, 1919. The judges of the award reported as follows: "Special stress is laid on the new fern Victory, with a rapid growth and a branching at end of fronds, making it a shapely plant. It should be a commercial success, and we **RECOMMEND IT MOST HIGHLY.**"

Strong plants, 2½-inch pots.....\$3.00 per dozen, \$20.00 per 100

NATIONAL PUBLICITY CAMPAIGN.

In the preparation of the list of subscribers to the Campaign for 1920, it is found that only about one-eighth of the florists in the country have, so far, realized that it is to their advantage to support this movement to the extent of pledging subscriptions. There is no longer any doubt as to the efficacy of the campaign—in the fact of the exceptionally large volume of business accomplished during the recent holidays, there could not be.

If the Campaign was not the most prominent factor in bringing about this condition, what was? Various features figuring in the volume of the Christmas trade were not mere happenings—the unusual demand for flowers and plants for gifts, for instance. This can be traced directly to our magazine advertising, which emphasized most strongly the suitability of our products for gifts.

Our Publicity Committee, of course, take a very broad view of the matter of publicity for the year just opened. The prestige we have gained for our slogan must be kept up, and this can only be done by our further and most persistent effort. We need no longer urge the importance of this, for if it is not now realized to the full it never can be. The public likes the slogan and responds to it readily enough, so that we have the prospect of immediate returns for our efforts continually before us. The more we do the greater the returns, and we must not lose sight of this influence, which it is in our power to exert.

A notable instance of the possibilities for popularizing the slogan is found in the Von Tilzer song "Say it With Flowers," which has pleased the public so much that it has become one of the greatest "hits" ever made on the stage. At the big new Capitol Theatre in New York, the largest in the world, the very astute producing director, Ned Wayburn, has taken the song for an especial feature in his season's program covering many weeks, and stages it two or three times daily, with an ensemble of thirty-nine singers, including chorus and ballet. The attendance at each performance averages about six thousand people, very many in the audience coming from distant points, so that it is not merely local publicity.

A new series of magazine advertisements have been prepared covering

LILIAM FORMOSUM, 7 to 9 and 9 to 10.
LILIAM MULTIFLORUM, 7 to 9 and 9 to 10.
LILIAM MULTIFLORUM GIGANTEUM, 7 to 9.

ELMER D. SMITH & CO.

Adrian, Mich.

special flower days and special occasions for gifts of flowers, and the use of these advertisements in large or small degree depends wholly on the support we are to receive from those most interested—the florists.

The St. Valentine's Day advertisement is a page, in four colors, to appear in seven national magazines, and it promises to awaken a great deal of otherwise dormant interest in this "People's Festival." The trade should link up with this advertisement by using liberally the poster stamps and posters supplied by our Promotion Bureau, particulars of which are promptly furnished on application to the Secretary.

Is our Committee to have the financial support necessary in all this work for the uplift of the trade? Will that large body of florists who have stood aloof from this movement join their more generous brethren in the trade who have sponsored the Campaign in the last two years, and have pledged their support during the present year? Will they help us to take more than a few steps into the "Promised Land" we have sought?

We do not ask contributions of a size that would "pinch"—merely an equitable support, accompanied by good-will and the desire to participate in work which is for the general good of the trade. "Help us to help you," that is the slogan of the committee, and expresses a whole lot. Will you do it?

JOHN YOUNG, Secy.

1170 Broadway, New York.

A CALL TO ORGANIZE A NATIONAL GROWERS' ASSOCIATION

Since the Detroit Convention last August I have met and conferred with many of our leading Growers of both Plants and Cut flowers. The consensus of opinion was in favor of organizing a national flower growers association. It was also considered that the meeting of the American Carnation Society in Chicago this month would offer an opportune time to form a temporary organization, and lay plans for a permanent organization, to be perfected at Cleveland during the S. A. F. and O. H. Convention next August.

I hereby issue a call for Growers interested to come to Chicago January 21st, and 22nd, prepared to help plan a sister organization to the F. T. D. and also another strong asset to the S. A. F. and O. H.

It is no use to try here to set forth the necessity for growers to unite for a common cause. Just come to Chicago and we believe you will be convinced.

J. FRED AMMANN.

GENERAL NEWS NOTES.

Edward A. and William J. Manda have become partners with their father, Joseph A. Manda, of West Orange, N. J., and the business has been incorporated under the name of the Joseph Manda Co. Both sons saw service over seas during the war. The capital stock is \$100,000.

Mr. A. A. Macdonald, who has been superintendent of the extensive J. B. Duke estate, at Somerville, N. J., is planning to enter the retail florists' business in Somerville. It is understood that he expects to grow many of his own plants and will erect a range of greenhouses for that purpose.

The Atlas Seed Co., of Dunkirk, N. Y., has been incorporated with a capital of \$20,000.

F. M. Pennock, of Porto Rico, is spending several weeks on a buying trip in this country. Mr. Pennock says that he has a nice line of aspidistras, dracaenas and other foliage plants.

The W. E. Trimble Greenhouse Co. has a distinct advantage over most florists, having a coal mine of its own. This mine is near Tiskilwa, Ill., and supplies all the coal that the company needs.

It is understood that P. L. McKee of Chicago, has become practically sole owner of the American Greenhouse Mfg. Co.

Charles Fisk has sold out his retail business to Emil and Herman Maerz, who have been associated with him for many years. Mr. Fisk is one of the old timers of Chicago, and now with Mrs. Fisk will enjoy a well-earned vacation in Hawaii, Japan and other distant countries.

Alexander Lurie, long connected with the Missouri Botanical Garden in St. Louis, is now connected with the BluMaize Blossom Shop, Ann Arbor, Mich.

Robert Craig, of Philadelphia, plans to spend a well-earned vacation at the Isle of Pines.

Gustave Koethe, of Roxboro, near Philadelphia, has suffered a heavy loss as the result of a fire which destroyed two greenhouses, a garage and a boiler shed.

The sixth annual convention of the Tennessee State Florists' Association, will be held at Knoxville, Feb. 5 and 6.

Hershon Oliver, formerly with the navy, has entered the employ of P. M. Olm, at Bath, Me.

George A. Tyrell, who formerly had a florists' shop on Central Street, Lowell, Mass., is now with J. J. McManmon.

The Englewood Nursery Co., of Leonia, N. J., has been incorporated, with a capital stock of \$60,000. The incorporators are Thos. H. Heminsley,

of Englewood; C. W. Schroter, of Leonia, and W. H. K. Davey, of Belleville.

During the latter part of the year western firms were badly handicapped by a railroad embargo which stopped the shipment of sphagnum moss from the Wisconsin swamps. This embargo has now been lifted and large quantities of moss are being put in by the trade.

J. G. Higgins, of Toronto, Ont., has taken a much larger store on Yonga street, close to Macey Hall. This move was made necessary by a large increase in his business.

It is understood that Fred Leissler will open a new store under the Jordan Hotel in Washington, which is in a very fashionable part of the city. Mr. Leissler has had much experience with his father, George A. Leissler.

Mr. A. M. Henshaw, president of the New York Florists' Club, entertained the past presidents and chairmen of the committees at dinner, Saturday evening, Jan. 10th, at the Hotel Pennsylvania.

The officers of the New York Florists' Club were installed Monday evening, Jan. 12th, in their new quarters in the Engineering Building. It was also Ladies' Night, and there was considerable offered in the way of entertainment, including dancing.

THE TALK OF THE TRADE

Growers of snapdragons in all parts of the country are confessing to much trouble with rust, which in some instances seems very hard to deal with. Recently I asked Mr. G. S. Ramsburg of Somersworth, N. H., who is considered one of the most successful of antirrhinum growers, how he regarded this problem. Mr. Ramsburg admitted that the question was a perplexing one under average conditions, but seems to have learned how to keep clear of the rust. He said:

"There has not been found a chemical cure for antirrhinum rust, but it may be checked by maintaining a temperature of 58 to 60 degrees, void of moisture. We have seen plants which were badly affected with rust recover when placed in a rose house, though the quality of blooms was not so good as when grown in lower temperature.

"Snapdragon plants may be had practically free from rust if seedlings are started and grown in houses where snapdragons have not been grown for a year or two. Do not crowd seedlings while in pots, so that watering may be done without wetting the tops. Keep the foliage covered with powdered sulphur until the buds appear, and never wet the when watering. If houses are free from red spider no difficulty will be had from this pest, as spiders do not particularly care for healthy, free growing plants.

"Summing up therefore," concluded Mr. Ramsburg, "I advise growers to avoid syringing, side drafts, and low temperature. These three don'ts will go far towards success with antirrhinums."

I believe that the smaller flowered type of Primroses such as *malacoides* and *Kewensis* are being raised in larger quantities for the past few years. Of the *malacoides* type, the growers are all particularly interested in the improvement brought out lately in such varieties as *Rosea*, *Towendsii* and *Rohrerii*.

I was talking with one of the good plant growers around New York recently and he placed as the best for Christmas the variety *Rosea*, and to follow that *Towendsii*. If I am not

mistaken, *Towendsii* was introduced by A. L. Miller of Jamaica, Long Island. It follows in nicely after *Rosea*, which is the good strain that F. H. Lemon & Co. introduced. In this class of Primroses, *Towendsii* stands above all. The color is deep enough to make a very pretty showing and the flowers are larger and in heavier trusses than in any of the others of that type.

Then we also have *Primula Kewensis*, which is sometimes called the Buttercup. The variety has the mealy foliage which is considered quite an asset by many. Some of the retail trade are very fond of this Primrose when it is well coated with that shiny, flowery powder.

To get away from the *malacoides* type of Primrose, I am reminded of a mighty pretty Chinese Primrose which I saw recently at the Webster estate in Brookline, Peter Arnott, gardener. Mr. Arnott had the prettiest shade of bright satin pink Chinese Primrose that I have ever seen. He raised it from seed called Sutton's Coral Pink, and I think the commercial grower

would do well to try this out. I believe it would be a good seller.

In connection with the high price of lily bulbs this year, I am sure it will be interesting to the florist who has bought lilies to know that at an advertised auction sale in London, England, on December 10th, 490 cases of giganteums were struck off under the hammer at an average price of very nearly \$55.00 per case. This indicates that the American grower is not paying so much in proportion for bulbs as our English friends.

It may also be interesting to listen to what one well-known importer has to say about the future for lilies. I will speak for the sake of simplifying the statement of giganteums. Other varieties will figure in the same proportion. This importer says that it is doubtful if lily bulbs will ever again sell below 10c. to the florist, and it may take three years before they can get down to that point. We are apt to forget that very much the same condition exists in Japan as in our own and other countries; that is, high wages

Well Grown *Primula Kewensis*

and abnormal prices in everything that is sold or produced. If the Japanese farmer cannot get the same high average price for his lilies, he will simply turn to other crops. Great Britain has shown readily that it will take up an enormous supply of Japanese lilies at a price which is every bit as much as the American florist thinks that he can possibly stand, and if they pay it there we will have to pay it here. I suppose this will mean a general reduction in the amount of lilies used in America.

It will be up to each individual grower to plant what he thinks he can dispose of at the high prices that will be necessary. I have also heard it said by another lily importer that if every florist in America should combine and decide to grow no giganteum lilies at all, the price might be depressed a little, but not to any great extent. As I said before, England would take up a large amount, the other countries their proportionate part, and the Japanese as you all know is shrewd in every way, particularly commercially, and if the lily crop won't pay him what he expects, he can readily shift to others.

I heard a traveler say a few days ago that the city of Tokio is the highest priced city in the world in the way of commodities. This was a great surprise to me, but we know what that must mean if we are going to buy anything from the Japanese.

How does the average grower feel this year about his returns on Paper White Narcissus? I believe that in spite of the fact that he paid more for them than under prewar conditions that the returns have been high enough to satisfy him. What is he going to do about paper whites for next year? To begin with, the probabilities are very strong that he will pay very nearly the same price. There may be a slight deduction, but if there is any, it will be very small, and don't forget that there will probably be no Roman Hyacinths.

BOSTON.

H. J. Arrentshorst, representing Baartman & Koning, bulb growers of Lassenheim, Holland, has been visiting the trade in Boston.

S. S. Skidelsky, of New York, has been spending considerable time in Boston the past week.

Recent visitors also included Anthony Ruzieka, rose grower, Chat-ham, N. J.; Samuel Salsberg, commission broker, New York City; Mr. Peterson, son of J. A. Peterson, Cincinnati, Ohio, exhibiting new seedling of Mrs. J. A. Peterson and Socotrana Begonias.

PROTECTION FOR PLANT BREEDERS.

Suggestions Which Will Be of Interest to Novelty Growers.

The question of giving adequate protection to the breeders of plant novelties is exciting as much attention in England as it is in this country, and it seems likely that the Englishmen will arrive at some solution first. At any rate they are tackling the problem with energy, as may be seen by the articles which appear in the overseas papers. Some pertinent suggestions are made by Mr. A. J. Bliss, a well-known grower, in the following article, which appears in the *Gardeners' Chronicle*:

Though the protection of plant breeders' work by the method of patenting can take no account of the question of merit of the novelty, it is a matter of at least equal importance, and the success of any method of protection and its value to the community will depend largely on completeness with which the merit or improvement can be authoritatively determined and recognized. This will include the testing and proving of varieties, the granting of certificates of merit and the recognition of the breeders' work. To secure recognition I would suggest that the Chamber of Horticulture should make it an established rule that in the trade lists of all its members the name of the variety should be followed by the name of the raiser, in brackets. If, in default of knowledge of the raiser, it should be thought advisable to give the introducer's name, a recognized distinction should be made by using ordinary type, while the raiser's name should always be in italics. The same practice might be followed in all lists and registers. To insure accuracy, and as an essential basis for determining and recording the merit or value of new varieties, it will be necessary to have a system of registration instituted and kept by an authoritative and competent body. The collaboration and assistance of societies devoted to particular flowers and eventually, I hope, of an association of plant breeders can be confidently counted on.

It is a matter of so much importance for the future of plant breeding from both the scientific and economic point of view that it deserves a Government grant in aid if necessary. The testing and proving of new varieties, so far as it was possible to undertake it, should form an integral part of this work, with the granting of certificates of merit as its final outcome. Equally, if not more desirable would be a committee of revision to weed out all obsolete varieties, noting the improved

varieties that have superseded them. The authority undertaking this registration would require to give a full and accurate description and, where possible, examine a sample of the plant or flower for identification and for testing. I am strongly of opinion that all raisers availing themselves of such registration should be required to give the pedigree and all other useful information, not necessarily for immediate publication, but as a record for the future. For, in so far as such information is collected and recorded, will the registration be of permanent value.

There is often a disinclination to give the parentage, and in some cases, such as at the starting of a new race, or a variety that constitutes quite a new departure, it is perhaps justified; but from my experience, as a raiser chiefly of perennial flowers, I have come to the conclusion that in the great majority of cases (quite 80 or 90 per cent.) there is no object at all in withholding the pedigree. It could, however, be arranged that such information should be confidential, at any rate for a certain number of years. A fee could be charged for any inquiry after that date.

LONICERA MAACKI.

It is interesting to find that *Lonicera Maacki* in its improved forms has become as popular across the water as in this country. One of the English papers has the following to say about this splendid honeysuckle:

L. Maacki is a native of Manchuria and China, the first plants having been received from the former country about forty years ago. The plants received on this occasion did not create any special interest, and it was not until 1900, when Mr. E. H. Wilson sent seeds of a very free-flowering form from China, which has since been named *L. M. podocarpa*, that general interest began to centre in the plant. It is a summer-leaving shrub 10 feet high, with long, arching branches. The flowers, borne very freely in May practically from every leaf-axil, are white, turning to cream with age, and deliciously fragrant. A well-flowered bush is a very desirable object, and a further period of beauty is apparent when the bright red, almost transparent, berries are ripe early in July. It grows freely in good loamy soil and forms a shapely specimen without pruning. It is advisable to leave plants unpruned as long as possible, only cutting back the branches when they are outgrowing their space.

INJURY FROM GALVANIZED WIRE.

It would be interesting to know if garden makers in this country have noticed any injury from the use of galvanized wire. In answer to an inquiry the editor of one of the English papers says that harm is done to the tender shoots of fruit trees, climbing plants, etc., by allowing them to come into contact with wire of the galvanized type. He explains the statement by saying that the acid used in galvanizing the wire is very destructive. At the same time he points out that ill effects may be prevented by giving the wire two coats of the best white lead paint as soon as it has been fixed in position.

PHILADELPHIA.

J. Otto Thilow greeted his old friends at Dreer's on the 5th inst. and received their congratulations on his safe return from his trip to Australia. He is looking well and hearty and says he had a fine time but just the same is mighty glad to be back again by the banks of the green Delaware—even if the green is hidden by ice and snow.

WE NOW INTRODUCE

Gladiolus "White America"

A seedling of "America," having same habit of growth, form of flower and substance. Color—buds flesh-white opening clear white, with a slight mark of blue in throat.

THE MOST IMPORTANT NEW VARIETY SINCE "AMERICA."

Bulbs—\$2.00 per doz.; \$15.00 per 100; \$125.00 per 1000.

A growers' organization

It is announced that at the coming Carnation Society's convention in Chicago the project of launching a special growers' association will be brought up and thoroughly threshed out. Ex-president Ammann of the S. A. F. is thoroughly committed to the plan and has informally discussed it before some of the local organizations in various parts of the country. As stated last week there seems to be a feeling across the water that too many societies are being formed, with consequent danger of overlapping. It seems quite possible that such a situation may eventually be reached here, but the arguments in favor of this new organization seem to outweigh whatever criticisms may be heard. The growers comprise a very large percentage of the country's florists, and they have problems which are peculiarly their own and wholly distinct from those of other branches of the trade. It would seem to be for their interests to have a direct opportunity to handle these problems. Of course the new organization will be of material help to the parent society, and no doubt will help to increase the membership of the latter. Altogether there seems to be every reason for wishing the project well.

Hammond's philosophy

Benjamin Hammond, the Slug Shot man, is famous for his terse, epigrammatic statements of fact. On the first page of this season's calendar he has a thought for the coming year which is well worth wide circulation because it hits the economic nail on the head more sharply than most of the more studied messages which come from Washington. *HORTICULTURE*, therefore, is glad to pass it on. It reads as follows:

"A year of unrest is ended—tens of thousands of young men have returned from the work of upholding civilization, which was America's part in the fearful struggle where the spirit of selfishness and barbarism attempted to rule the earth. Now America has been shadowed by much wanton recklessness the past few

months, under the guise of the High Cost of Living, but the High Cost of Living cannot be overcome unless production is both abundant and reasonable, and that is where the intelligent sense of American citizens must come into action. If we are to enjoy 'A Government of the People and by the People,' common sense, free from wild reckless demands must prevail, otherwise the glory of the Stars and Stripes wilts.

"The future prosperity and comfort in every community in this great land, depends upon Fidelity, Patience and Industry, and without this spirit dominating there can be no National greatness and little home comfort, but with Faith in the Ever-living God to rule us, America will be a guardian of civilization, which is On Earth, Peace and Good Will to Men, and that brings happy homes. But the strike spirit never will."

Easier hours

Although the movement is going along rather quietly the tendency toward shorter hours and Sunday closing in the various branches of the florists' industry is marked. In most of the larger cities at least a few of the leading florists have made a reduction in hours of labor and have established the Sunday closing rule. A shorter day is now rapidly coming to be a fact in the Boston district, and after a few stores inaugurate this system, the others usually have to follow in order to keep their help in a contented frame of mind. A report from Cleveland shows that the Sunday closing movement is making rapid strides there. Some of the dealers have been closing on Sundays for a long time, while others have recently adopted the plan. There are still some of the florists in Cleveland, as in other cities, who disapprove of Sunday closing, and there are cases where their objections are well grounded. This applies especially to florists who are located close to cemeteries, and who depend upon cemetery business largely for their profits. Such florists often seem justified in keeping their places of business open on Sundays, but there is no good reason why they should not equalize the matter by allowing their employees half holidays or part time off during the week. There are usually dull times when this could be done readily. After all, it is only a matter of fair and just treatment, and the employees of a florists establishment naturally agree that they should be on a par with those in other lines of trade.

Of course it is impossible to fix hard and fast rules. Among the wholesalers, for example, it is necessary to be on the job for a much longer time than in a retail store. In such an establishment orders are likely to come in often by wire from distant customers, asking for immediate shipments, and of course such orders must be taken care of promptly. Here again the solution is simply fair and equitable treatment, such as all of the large wholesale houses seem disposed to give.

In the main, the good intentions of the employers meet with an appreciative response from the employees. In some establishments, unfortunately, there are a few men who seem unwilling to buckle down to work in the good old-fashioned way. Now it will be impossible to properly adjust economic conditions in this country until employees in every industry realize that the matter lies with them. Under-production and a general tendency to slow down is largely responsible for present day conditions. Even in establishments where conditions are considered reasonably satisfactory it is necessary at present to employ five or six people to do as much work as was turned out by four previous to the war.

SERIES OF LECTURES

New Plan Adopted by Massachusetts Horticultural Society

A new plan of lectures is to be followed by the Massachusetts Horticultural Society the coming season. Instead of having a series of lectures by different speakers, Prof. W. T. V. Osterhout of Harvard University has been engaged to give a course of talks on The Living Plant. The dates and titles will be as follows:

February 28. Germination and root development. The requirements for successful germination; the forces which direct the root in its search for food and water.

March 6. The root in relation to the soil. The absorption of materials by the root; the nature of the soil and the principles of soil-management.

March 13. Work of the leaf. The manufacture of food from air and water; the role of chlorophyll and sunlight.

March 20. The structure and functions of the stem. Division of labor in the tissues of the stem; conduction of food and water; principles of growth.

April 3. Flower and fruit. Pollination, fertilization, the development of the seed and the formation of fruit.

April 10. Plant breeding. The laws of heredity and their practical application to the improvement of plants.

F. A. Wilson of Nahant is chairman of the lecture committee.

THE HORTICULTURAL SOCIETY OF NEW YORK.

On Wednesday, January 21, 8.15, at the American Museum of Natural History, 77th street and Central Park West, a lecture will be delivered by Mr. M. G. Kains on "Pruning, especially as applied to Fruit Trees and Ornamental Shrubs." The lecture will be illustrated with lantern slides. Mr. Kains is too well known as an authority on this subject to need an introduction.

Those having rare, interesting, or unusual plants or flowers are invited to bring them to the meeting. Facilities will be provided for their display. A fund has been placed at the disposal of the Exhibition Committee for the purpose of awarding prizes for worthy exhibits.

All are invited to come and bring their friends. Admission is free.

GEORGE V. NASH, Secy.,
New York Botanical Garden.

Are You Going to Chicago?

On January 21st, the American Carnation Society will meet in Chicago. Preparations are being made to take care of a large attendance. The meeting will be very interesting as well as beneficial. This will give an opportunity for florists to get together and discuss subjects of other importance outside of Carnations.

Chicago hotels are always crowded and we advise you to make reservations in advance by writing to various hotels for reservations. We will be glad to have all your mail addressed in care of our office which is two blocks from the leading hotels of the city and in the heart of the wholesale florists. We will do everything in our power to make your visit a pleasant one.

Hoping to have the pleasure of meeting you.

Yours very truly,

DEPARTMENT OF PLANT REGISTRATION

Public notice is hereby given that J. A. Peterson & Sons, 3132 McHenry Avenue, Westwood, Conn., O., submits for registration the new plant here mentioned:

Begonia seedling, No. 442, parentage Begonia Mrs. J. A. Peterson X Socatrana. Strong, sturdy grower, large flowers, about the size and shape of those of Begonia Melior, color American beauty Rose, foliage dark brown turning to green. The variety was originated by the firm about three years ago, and as a commercial variety is considered by them as the best they have ever offered for dissemination, flowers lasting well on the plant, not falling readily.

Any person objecting to this registration, or to the use of the proposed name, is requested to communicate with the Secretary at once. Failing to receive objection to the registration, the same will be made three weeks from this date.

JOHN YOUNG, Secy.

1170 Broadway, N. Y.

W. A. Manda of South Orange, N. J., has offered a prize of \$10 for the best dahlia grown in a pot and exhibited at the next exhibition of the American Dahlia Society.

OBITUARY.

William Stuart Allen.

William Stuart Allen, the oldest wholesaler in business, died Tuesday morning, Jan. 13, 1920, at his home in Larchmont, N. Y., of a complication of diseases. He was about 64 years of age and his place of business was 53 West 28th Street.

He has been in the wholesale cut flower business for 40 years or more continually except for a couple of years, originally succeeding his brother, James, now deceased.

Mr. Allen was vice-president of the Wholesale Cut Flower Association.

He is survived by his wife and daughter.

The funeral took place Thursday morning, Jan. 15th, with interment in Long Island.

John E. Geary.

John E. Geary, aged 60 years, a widely known florist in Northwestern Massachusetts, died at his home, 50 Park avenue, Salem, after a short illness. He was the last member of the firm of McGee, Geary & Co. Mr. Geary was a member of Vergua Council, K. of C.; the M. C. O. F. and other organizations. His wife, Abbie J. Geary, died recently. He leaves two daughters.

Flowers Under Glass

Godfrey callas are now being grown so widely that they cannot be overlooked when discussing commercial plants. Sometimes they are benched but probably it is better on the whole to keep them in pots, shifting them as required, up to 6's. The last shift should be made at once if the work has not been done before. These callas require a reasonably good soil, but too much manure is not beneficial. They thrive best in a temperature of about 55.

If you are having trouble with snapdragons, you will be wise to restrict the amount of space given them. Some growers are losing money because they cannot get perfect blooms. Nobody yet seems to know just how to meet the trouble, but the wise florist will study the question carefully before he runs the risk of a serious loss.

There is always a call for mignonette, and it pays to grow them when good spikes can be produced. This is a crop which likes manure water about twice a week when the spikes are forming. Disbudding is necessary to get large flower heads, and it is well to keep the plants carefully tied up, straggly growth being cut out at the same time. A top dressing of sheep manure and soil in equal parts helps to produce big spikes which the market wants. Don't forget that mignonette is not a warm temperature plant. Forty-five degrees at night is as much heat as it should have. Oftentimes a sowing can be made now in pots for bringing along in the violet house or some other cool part of the range.

Few florists have any surplus of asparagus, and now is a good time to sow the seed, both of plumosus and sprengerii. Equal parts of sifted loam and leaf mold with a little sand added makes a good soil for the pans. A night temperature of 70 degrees is needed to make the seed germinate well, and the pans should be kept shaded until the seedlings appear, after which an abundance of light should be given. Pot into very small pots as soon as the plants are big enough to handle. Loam, leaf mold, and rotted cow manure in equal parts is recommended as a good potting soil, and a temperature of 60 degrees is about right for asparagus.

Carnation Morning Glow Has Been Sold in the Boston Market for 4 Years

It is there considered a bread and butter Carnation. **The Grower likes it**, because it is free and has no tricks. **The Seller likes it**, because it ships and keeps splendid—and what is best of all—

THE LADIES ADMIRE, AND ALWAYS BUY IT for its fresh, rosy color, just like morning glow. **Morning Glow** is early, free, has a good habit, fine stem and for blooming during the Summer, cannot be beat. While not one of the largest Carnations, it is considered

THE MOST PROFITABLE OF ALL
Cuttings sold by the originator, \$7 per 100, \$65 per 1000
EDWARD WINKLER, Wakefield, Mass.

DESTROYED BY HAIL

Last Summer a florist who had imagined he was outside of the hail section lost upwards of 50,000 square feet of glass by hail with no insurance to recompense him.

He is now a member of the Florists' Hall Association of America.

Profit by experience and join the Association now. Address

JOHN G. ESLEB, Secretary
Saddle River New Jersey

INSTRUCTION IN GARDENING

Practical instruction is offered in vegetable, flower and fruit gardening, greenhouse and nursery practice, together with lectures, laboratory, field and shop work in garden botany, zoology, pathology, landscape design, soils, plant chemistry and related subjects.

The curriculum is planned for the education of any persons who would become trained gardeners or fitted to be superintendents of estates or parks. Students may be admitted at any time.

Circulars and other information will be mailed on application.

Christmas Rose Possibilities

Wellesley, Mass., Jan. 6, 1920.

Some one asks—Is it possible to make a success—a commercial—success of Christmas rose hereabouts. The answer is, yes, if one will take the trouble to meet their cultural requirements.

We have tried Christmas roses, here and there—in New Jersey and Massachusetts—as rock plants, and in sheltered nooks, both in sun and shade, but we have failed to make them the success worth while. They will live for a few years, but seldom thrive in the open. If you get them vigorous enough to bloom, climatic conditions are against them in other aspects. Their natural blooming season is from November onwards, and when nicely started, along comes frost, and shuts them off until spring. Their blooming season, is, so say, divided, and all the fine vigorous buds on the way to bloom in December, and through the winter, are killed, and nothing is left for spring, but weaklings. That is the record for Massachusetts, and New Jersey not much better.

The best success I have seen in this vicinity was at the Powers' place—that was—and now Butterworth's in

Framingham. When Butterworth was Powers' manager, about 20 years ago, he used to have about half a dozen cold frames filled with Christmas roses. They were on the shady side of the house, and opened up north. They were seldom disturbed, fed, and watered well, and were a thrifty lot. The frames were protected in winter with glass, mats and shutters, so as to make conditions as near natural as possible, and some fine flowers were produced all winter.

I don't think Butterworth has continued their culture probably because "it did not pay." The flowers last a month when cut, and go through the changes from green tinted when cut, to pink tinted, and green tinted when ageing. Such flowers ought to be worth 25 cents each, and really one ought to get that for them to make them pay. If they could be popularized, people would be willing to pay, what it costs to grow them. They should be put in the class with orchids, for to grow them successfully they need fully as much care.

Very few people make the difference between Christmas roses and Lenten roses. They belong to two entirely different types. The Christmas roses, *Helleborus Niger*, have scape-

like inflorescences—that is, come up directly from the rootstocks, with usually only one, but occasionally two nodding, white or slightly pink tinted flowers.

The Lenten roses are mostly varieties of *Helleborus orientalis*. They do not bloom until winter is past, or thereabouts. They need the protection of a mulching, more than anything to keep them from starting out too early, as occasionally they get nipped. Sometimes winter frosts destroy the foliage, which badly mars their beauty, but even so they bloom well, and make a fresh lot of leaves. I should say, in speaking of Christmas roses, in respect to winter injury to the foliage, that the loss of that is most detrimental to future growth, as evidently they are to a greater extent, evergreen.

Lenten roses carry a branched panicle of bloom, bearing several flowers, which opens in succession, and gives them a long season of bloom, but they do not have the substance of Christmas roses, and do not last as long when cut.

There are several distinct varieties of *Helleborus orientalis*, which in some places are given the rank of species. But that they are only varieties may be proved by raising them from seeds—they seldom or never come true, and from one batch of seedlings

Helleborus niger

The Meyer Florist Threads can be had in any size or color that is wanted. Can furnish same at \$2.25 per lb. with liberal discounts in case lots of 500 lbs. and upwards. Every spool contains 2 ounces of actual thread, 16 ounces to the pound or no sale. Be sure and get the Meyer Threads and take no other.

you may get any of the named varieties.

The type has white, purple edged flowers. In variety colchicus and colchicus punctatus we have handsome spotted flowers.

Var. olympicus is a handsome white variety, which best of any of the H. orientalis varieties might take the place of the Christmas rose.

V. guttatus has beautifully spotted flowers.

One might make a large collection of these Lenten roses, but the three named above represent about all the colors.

T. D. H.

CARNATION SHOW FOR BOSTON.

The Gardener's and Florists' Club of Boston is to conduct a carnation show at Horticultural Hall, Feb. 10.

The money for the various premiums—two in each class—will be contributed by the Club and various firms and individuals. Prizes will be similar to those offered on February 18, 1919, when the first show of this nature was held, and in a later notice exact amounts will be given.

The hall will be open to the general public free of charge, from 2 to 7.30 p. m.

Scoring of carnations will be by the American Carnation Society scale, as follows: Color, 25; size, 20; stem, 20; form, 10; calyx, 5; substance, 15; fragrance, 5; total possible points, 100.

This exhibition, the only mid-winter one to be held in Boston, while gotten up at short notice, will, we feel sure, be appreciated by the flower-loving public of Boston, as was the very successful one held a year ago. A cordial invitation is extended to growers, both private and commercial, and retailers to contribute something to make the show a creditable one.

The judges will be William H. Judd, chairman of the Exhibits Committee of the Gardeners' and Florists' Club; William Anderson, representing the Massachusetts Horticultural Society, and Henry Penn, representing the retailers of Boston.

W. N. CRAIG, Secy.

THE LADIES' SOCIETY OF AMERICAN FLORISTS.

The following appointments on the Board of Directors have been made by the President, Mrs. B. Hammond Tracy:

For three years—Mrs. R. C. Kerr, Texas; Mrs. W. W. Edgar, Mass.; Mrs. F. H. Traendly, N. Y.

For one year—Mrs. Philip Foley, Ill., to fill the unexpired term of Mrs. J. F. Ammann.

CHICAGO FLORISTS' CLUB.

The meeting was called to order at 8 p. m., President A. J. Zech, presiding. The retiring president expressed thanks to all the members for the support given him in his administration during the past year, and expressed the hope that our Club would soon have a home of its own. He urged every member of this organization to pledge loyal support and assistance to our president who is to preside for the coming year.

Mr. O. E. Ollinger was requested to escort President Elect T. E. Waters to the chair. Mr. Waters, in accepting the presidency, delivered an eloquent speech promising to wield the gavel of fairness to all, and his keynote of remarks was that all meetings should start punctually.

President Waters next installed Vice-President-elect A. T. Pyfer, Secretary-elect F. Lautenschlager, Treasurer-elect Paul E. Weiss. All of the incoming officers responded with a speech.

The following applications for membership were received:

Ralph B. Howe, 231 W. Madison St., Chicago, Seedsman, with W. W. Barnard Co.

Walter G. Poehlmann, Morton Grove, Ill., Florist, with Poehlmann Bros. Co.

Wm. T. Collins, 1457 E. 70th St., Chicago, florist, and Mr. Jos. Werstler, 2221 W. Madison St., Chicago, Ill., with Schiller the Florist, were elected members.

All arrangements have been completed for the annual banquet to be held at the Grand Ballroom of the La Salle Hotel, on Jan. 22nd. Cost, \$3.00 per plate, including dancing and entertainment.

President-elect T. E. Waters and Secretary-elect F. Lautenschlager tendered their resignation as trustees. A. J. Zech was elected as trustee to serve for two years. August Poehlmann was elected to serve for a term of one year.

George Asmus made a rousing appeal for a permanent home for our club. This matter was placed in the hands of Mr. Asmus and the trustees for further investigation. The committee is to report at the February meeting of our Club.

The meeting on February 5 has been set aside as the annual Novelty Night. Guy French, Chairman of the "Good of the Club" Committee, will be in charge of this affair. Growers who have novelties to show, should make arrangements at once to exhibit same at this meeting.

F. LAUTENSCHLAGER, Sec.

THE BOILER OF Unequalled Fuel Economy

Kroeschell Boilers, the best by test since 1879. Forty years' experience.

THE QUALITY PLACE OF BOSTON

Regarding the Kroeschell, it is the best we have ever had and satisfactory beyond our expectations. It heats up especially quick and has saved us considerably already in the price of fuel. When we are in need of another boiler we will give the Kroeschell the first consideration.

(Signed) WM. W. EDGAR CO.,
WAVERLEY, MASS.

No Masonry—No Tubes

TUBELESS BOILER

Kroeschell Bros. Co., 466 W. Erie St.
CHICAGO

When You Buy—Get a Kroeschell

3,016,286 sq. ft. of glass was equipped with Kroeschell Boilers during the year of 1919.

OHIO'S CELEBRATED CYCLAMEN SPECIALIST

After using your No. 12 Kroeschell Boiler I came to the conclusion that had I to install more boilers it would be the Kroeschell and no other. It really is a pleasure to heat, no trouble to get the desired heat in a very short time.

(Signed) CHRIST. WINTERICH,
DEFIANCE, OHIO.

SUCCESSFUL SELLING

Some of the Things That Help to Hold Customers.

It would be to the advantage of every retail florist to copy a card put out by a big Boston establishment, and give it a conspicuous place on the wall. This card reads as follows:

YOU'RE THE BOSS

One fact we constantly try to drive home to our salespeople.

Profits pay their salaries. There would be no profits without customers.

No employee serves the company well unless he satisfies the customers.

I have had something to say before about the necessity of having salesmen properly trained so as to make a good impression when meeting customers. To my mind this is one of the secrets of a successful retail business. One careless, slovenly, discourteous, or garrulous salesperson can do more harm in one day than the value of his or her week's salary.

It would seem as though a plan tried out by a shoe concern in Montreal might be adapted to meet the needs of florists who have a rush of business at certain hours but long dull periods at other times. This concern presented a dollar bill to each customer who bought shoes during the dull hours. A florist might offer a carnation or some other bloom to help even up the buying period. This leads to another thought, the possibilities of interesting merchants in the distribution of flowers to help trade under special conditions.

Not long ago I heard of a florist who went to a department store which was having difficulty in disposing of certain merchandise, and succeeded in selling him ten thousand roses. A rose was given to each customer and a big rush of business resulted. In-

dentally there was a very curious circumstance in connection with this deal. A florist who had a store in the immediate vicinity found himself unexpectedly deluged with orders and in a short time was cleaned out of roses, simply as a result of the free distribution of the department store, which got everybody to thinking about flowers and greatly stimulated the demand for them.

Getting back again to the attitude of clerks toward customers, I was interested in the special despatch from Miami, Okla., to the Retail Public Ledger of Philadelphia. It seems that a certain concern lost several of their best customers, one after another, and couldn't understand why. Finally one member of the firm put the question direct to an old customer, a lady whom he met on the street. "If there was anything the matter with the goods," he said, "we will willingly replace them."

"It wasn't the goods at all." It's those insulting clerks you have. When you are in the store they are very attentive to all customers—the very acme of courtesy, but when you are

away these same clerks are rude and often really insulting."

Now the natural thing to do under such circumstances would be to call the clerks together and give them a call down. The store owner, however, was sceptical as to what the results would be. Instead, he announced the next morning that a commission of two per cent would be paid the clerks on each one's sales, in addition to the regular salary.

The change in those clerks was instantaneous—from hanging back and waiting for another to wait upon a customer, each tried to be the first one there. No more was there any squabbling with customers, and no more old customers quit the store, and one of the clerks was heard to say that she didn't feel like a beggar any more but like one of the firm.

Results in actual sales? At the end of six weeks the owner figured out a profit of \$310.00 more than in the previous six weeks, in spite of the commissions paid.

All of which goes to show that you can catch more flies with molasses than with a club.

DREER'S "Riverton Special" Plant Tubs

WHY?

A. H. HEWS & CO., INC.

Cambridge, Mass.

**When writing to advertisers kindly
mention HORTICULTURE****CARLUDEVICAS.**

The genus of carludevica affords us a reasonable number of desirable species well deserving their cultivation. Their comparative ease of culture, their elegance and adaptability for decorative purposes, indoors as well as outdoors, are things not to be overlooked. Be it for the semi-tropical garden, conservatory, house or table decoration, one will always find his acquaintance with them highly gratifying and compensating. In cultivation they are generally regarded to be palms, nine out of ten who are familiar with them at all feel disappointed when informed otherwise, but they are certainly not palms. They belong to the cyclanth division of the pandanads. They are palm like in appearance but belong to the tribe of cyclanthae and not palmaceae.

They are usually propagated by seeds, suckers and the division of old plants. The seeds are very fine and must be sown rather carefully. With gentle bottom heat and with sphagnum moss as a medium for germination, they will make their appearance within two or three weeks. And when division is resorted to, it should always be done in the spring months. They should be potted in a mixture of two parts of sandy loam soil, one part of well rotted cow manure and liberally watered and syringed.

The following three species are very desirable:

C. palmata. This is a very desirable and beautiful species. It is very suitable for the conservatory, dwelling house and semi-tropical garden. Its leaves or blades are palmate, two to three feet across, and divided into four lobes; the petioles are round, smooth, dark green and from four to six feet in height.

C. elegans. A real elegant and charming species, under good cultivation attaining a height of from three to six feet. It is still more beautiful and elegant than the above. Its blades are four or five lobed and cut into segments.

C. rotundifolia. A very ornamental plant, much resembling *C. palmata*; It is usually three lobed, which are segmented and pendant, and give an exceedingly graceful appearance to the whole plant. It is admirably adapted for table decorations when in a young state.

Every Reader of "Horticulture" Needs

DR. L. H. BAILEY'S BRAND NEW Standard Cyclopedia of Horticulture

Six large quarto volumes. More than 2,600 pages. 24 full page exquisite color plates. 96 beautiful full page halftones. More than 4,000 text engravings. 500 Collaborators. Approximately 4,000 genera, 20,000 species and 40,000 plant names.

THE New Standard Cyclopedia of Horticulture has been freshly written in the light of the most recent research and experience. It is the fullest, the newest, the most authoritative of all works of its kind and constitutes the most conscientious attempt that has ever been made to compress the whole story of our horticultural thought, learning and achievement into one set of books. It is both an Encyclopedia and a Manual.

A Few of the Many Important New Features

Key to Identification of Plants This is a device to enable one to find the name of a plant. The name thus found is quickly referred to under its alphabetical location, where full information will be found in regard to it.

Synopsis of Plant Kingdom This is one of the most important features of the new edition. It constitutes a general running account of the classes, orders, and groups of plants, with a brief sketch or characterization of 215 of the leading families comprising those that yield practically all the cultivated plants. These family descriptions give the botanical characters; the number of genera and species and the ranges; a list of the important genera; brief statements in regard to the useful plants; and diagrammatic illustrations.

Illustrations There are 24 colored plates; 96 full page halftones; and more than 4,000 engravings which serve as guides in the text.

The Glossary This is an analysis of all technical terms that are used in the work and in similar works. It comprises botanical and horticultural terms with brief definitions.

Translation and Pronunciation of Latin Names In Volume I is inserted a list of between 2,000 and 3,000 Latin words used as species—names of plants, giving the English equivalent or translation and the pronunciation.

Class Articles Special effort has been made to secure the best cultural advices for the plants requiring peculiar or particular handling. Here are some of the titles of these articles: Ants; Autumn Gardening; Bedding; Diseases; Drainage; Floral Designs; Formal Gardening; Hotbeds and Coldframes; Insects; Landscape Gardening; Lawn Planting; Orchards; Rock Gardening; Subtropical Gardening; Tools and Implements; Village Improvements; Window Boxes, etc.

General Index The final volume contains a complete index to the entire work, enabling the reader to locate volume and page of any subject he has in mind.

The complete set of six volumes, bound in decorated buckram, will be delivered to you for only \$3 down and \$3 a month for 11 months, until the full amount of \$36 has been paid. Cash price \$35.

Further Particulars Sent on Request

Principles and Practice of Pruning

By M. G. KAINS

Lecturer on Horticulture, Columbia University

Few practices in the handling of plants, especially fruit bearing plants, attract so much interest as do those of pruning. The methods are so varied, the results so diverse, and the opinions of growers so apparently contradictory that this subject is always one of the most interesting, and the surest to hold attention and arouse discussion.

Particularly during the last ten or fifteen years when the principles of plant physiology have been more and more satisfactorily applied to plant production and management has interest settled in pruning. During the latter half of this time also more and more investigations and tests have been conducted by experiment stations and other workers to test out methods and principles in the interest of science and for the benefit of growers. The accumulation of such new knowledge has become very considerable especially in the last decade, but it is necessarily so scattered that very few growers have access to it, hence the demand for a book, which shall present the really important features of these investigations as well as set forth the fundamental principles based upon the laws of plant growth.

This volume is lavishly illustrated mainly by actual photographs of specimens which show good and bad practices. The author has spared neither time nor expense in gathering his photographs, each one of which tells its story.

After a few pages of introduction the author discusses Plant Physiology as related to pruning. A chapter takes up the Philosophy of Pruning, itself a very interesting subject. Then follows a classification and clear discussion of Buds, very fully illustrated from life. How Wounds Heal is an exceedingly interesting chapter, as are also those on Prevention and Repair of Mechanical Injuries, Pruning Nursery Stock, Young Trees, Old Trees and Odd Methods of Pruning and Training, Juvenating Neglected Trees and Practical Tree Surgery.

Profusely illustrated. 400 pages. 5½ x 8 inches.

Cloth. Net, \$2.00.

Plant Propagation, Greenhouse and Nursery Practice

By M. G. KAINS

We have had many inquiries from time to time for a reliable and up-to-date book on plant propagation, but were always at a loss to find any publication that we could recommend. The subject has been dealt with in fragmentary manner only in books that have come to our notice. So it is well that this new work has been issued, especially as it is both comprehensive and practical, and it should meet with a ready sale among plantsmen, nurserymen and gardeners. There are nineteen chapters covering in detail topics of germination and longevity of seeds, propagating by buds, layering, cuttings, grafting, etc., fruit tree stocks, scions, etc., and there are eight pages of condensed cultural instructions in tabulated form, covering annuals and perennials from seed, woody plants, evergreens, vines, bulbs and tubers, greenhouse and house plants, ferns, palms, water plants, orchids and cacti. The illustrations are numerous, comprising 213 figures and halftone plates. There are 322 pages well bound and on heavy paper, teeming with helpful information. It is a book which no cultivator can afford to do without. It is worth many times its price. Copies can be supplied from the office of HORTICULTURE at publisher's price, \$2.00.

FERNS

THE VICTORY FERN (*Nephrolepis victoria*)

We take pleasure in offering this new and valuable variety of *Nephrolepis*. It is a beautifully crested form of "Teddy, Jr." with fronds frequently subdivided on the ends, making a most unique, distinct, and desirable variety.

This fern was

AWARDED A BRONZE MEDAL

at the S. A. F. Convention at Detroit in August, 1919. The judges of the award reported as follows: "Special stress is laid on the new fern Victory, with a rapid growth and a branching at end of fronds, making it a shapely plant. It should be a commercial success, and we **RECOMMEND IT MOST HIGHLY.**"

NATIONAL PUBLICITY CAMPAIGN.

The drive for St. Valentine's Day business is just now very active. Our Promotion Bureau has received over four hundred order for stamps and posters, some of the orders quite large, a few calling for as many as 50,000 stamps and 100 posters each. These stamps and posters are inexpensive and are very valuable aids in local publicity for what can be made one of our leading flower days. Every florist can use at least a few stamps, and certainly one poster for window display. Both link up with our magazine advertising, and he is a wise florist who sends in his order right away. Thousands of people are buying these stamps and posters, reminded of a day when sentiment should prevail, and flowers should, above all things, be the medium for its conveyance. The greater the publicity given to the day the better results for the florists, and, surely, the small cost of the stamps and posters should hardly be considered in the matter. Wake up, and send in your order if you have not already done so.

THE BILLBOARD SIGNS.

With the holiday business out of the way, the matter of the billboard signs should now receive attention. Many hundreds of florists have good locations for these signs on their own properties, and an installation would help each and every one, whether grower or retailer.

We are glad to have had the support of some of the members of our Society in arranging for installations. W. H. Eiss of Buffalo, Secretary of the Western New York Florists' Publicity Committee, has arranged for the location of twenty (20) billboards. Guy French, of Morton Grove, Ill., has promoted orders for as many more. Wallace R. Pierson of Cromwell, Conn., at a meeting of the Hartford florists last week, obtained pledges for ten (10) billboards, a pretty good showing for Hartford and vicinity. Many others of our members could, in their communities, very easily arouse interest in this feature of our Campaign, which should create a tremendous amount of publicity for our slogan "Say it With Flowers." CAMPAIGN FUND FOR 1920.

With the splendid results accruing from our work for last year, our Publicity Committee ought to receive a very much greater financial support than they have had so far. These results are only possible through expenditure of money, and there has not been as much cash available for purposes of the Campaign as there should have been. What is \$54,000 among 20,000 florists? A little more than \$2.50 per head—and some of the subscribers paid for as many as 200 heads. This is shameful. We get, absolutely, what we pay for—profitable publicity—so why should anyone withhold a subscription. Never was there greater prosperity in the florists' industry, and the Publicity Campaign has promoted it.

You, Mr. Non-Subscriber, share in it all, at the expense of your brethren. Do you think this is right? Of course, you do not. Then send in your check for any amount you can afford, and feel that you are helping the Committee to help you. Let us keep the Campaign going—harder than ever. The more we do the more the results. Flowers are being used now for purposes never thought of before.

The Campaign Fund for 1920 is, so far, \$37,572.50, actually pledged.

NEW SUBSCRIPTIONS.

The following subscriptions have been received and are in addition to those previously announced, annually for four years, unless otherwise stated:

Weidemann's Flower Shop, Jersey City, N. J.....	\$ 5.00
Thomas J. Gibson, Newport, R. I. (1 year).....	5.00

F. T. D. ACCOUNTS.

From Now On They Will be Paid Through the Clearing House.

An important statement has just been sent out by Albert Pochelon, Secretary of the Florists' Telegraph Delivery Association. It reads as follows:

A resolution adopted by the Board of Directors authorizing the Secretary to pay all accounts that are sent to the Clearing House, took effect January first.

Accordingly, all accounts sent to the clearing house for collection will be paid promptly, after this office has been assured that said account is due and no adjustments are necessary. A check for the amount less 20 per cent will be sent to the creditor. The florist owing the account, automatically becomes debtor to the F. T. D. A. for the full amount. All checks to be issued against the Guarantee Fund of the Association. When the accounts are paid they will be credited to the Guarantee Fund less 20 per cent. Any surplus arising (after expenses are deducted for collection) from this procedure will be turned into the general fund of the Association.

The penalty for failure to pay the accounts within ten days after due

notice from the Secretary, will be suspension and the delinquent's name withdrawn from the list, Article 11, Section 10, Cons. and By-laws. Any balance due a suspended member of his Guarantee Fund after all accounts are paid will be remitted after a lapse of the authorized time, see Article 4, Section 6, Cons. and By-laws.

The Secretary has been called to account many times by members of the F. T. D. A. for not using his official right in issuing checks to cover accounts due. To avoid further criticism the above action was declared timely.

Yours for more F. T. D. A. co-operation.

ALBERT POCHELON.

Sec'y F. T. D. A.

PHILADELPHIA.

William J. Therry, late of Dreers, is now in charge of the vegetable seed department of I. N. Simon & Son at 5th and Market. Mr. Therry is one of the best posted men in the business, having been at it for over a quarter century and is especially strong on the market garden end. The Simon outfit has certainly secured a valuable man and the public will no doubt show its appreciation by still stronger adherence to this up-to-date firm.

BOSTON.

A union meeting of Massachusetts various agricultural organizations was held at Horticultural Hall this week. The Massachusetts Nurserymen's Association and the Gardeners' and Florists' Club of Boston, co-operated by conducting a session Wednesday evening at which time there was a lecture by Arthur Herrington, of Madison, N. J., on "Flowering Trees and Shrubs" and another by Ernest F. Coe, of New Haven, Ct., on "Japanese Gardening and Gardens."

Ernest H. Wilson, of the Arnold Arboretum, lectured for the Pennsylvania Horticultural Society, Tuesday evening. Mr. John Farquhar accompanied him to Philadelphia.

E. I. Farrington, editor of HORTICULTURE, lectured on the Arnold Arboretum in the Essex Institute Course at Salem, Monday night.

The Rochester, N. Y., Florists' Association has elected the following officers: President, George J. Keller; vice-president, James Sproat; secretary, Irving S. Briggs; treasurer, Harry L. Glenn.

James Burke, for many years on the J. A. Foster estate in Warwich, R. I., has gone with Fred Davis of Pawtucket.

THE TALK OF THE TRADE

A comparison of the quality of cut roses offered in the wholesale markets of Boston and New York is interesting at this particular time. It is true that all grades can be found in both markets; it is also true that Boston is offering good average quality, but some of the very well grown Columbia and Premier that were seen in New York the past week were exceptional as regards color, size and in fact general finish. It would appear that these two varieties take kindly to growing conditions around New York and New Jersey.

With the commercial varieties of the past few years, it was a pretty difficult thing to find better quality than was

found in the Boston market, but it does seem now that New York is taking the lead on Columbia and Premier at least.

The growers of years gone by when long-stemmed stock was in demand cannot help noticing the change in this respect nowadays. Twelve, fifteen and eighteen inch stock is marketed in quantity, and these are the popular lengths. Very little of the very long-stemmed stock is brought in, and there is no question that it does not pay to pinch for three feet stems.

There has been more or less talk going around regarding an embargo

placed upon American roses going into Canada. It would seem that there must have been something considered and proposed in this respect, but I heard one prominent rose grower say that he had it upon good authority that there was no intention of "a revenge boycott" on American-grown stock. The whole trouble was started with the idea that rose midge was coming into Canada from American growers, and if this embargo was proposed or if it is going into effect, it is with an idea for their own protection and not to boycott American stock with the idea of revenge as has been intimated.

Bulbous stock is commencing to appear on the market and pans of very well grown tulips in particular are

Forced Darwin Tulip William Copeland

seen. The early lots of hyacinths, at least those that I have seen up to this time, are decidedly inferior. There is some very fine Darwin tulip stock offered, however, and this tulip grown properly so that it is not drawn up with too long stems, is about as satisfactory as any bulb that can be put in to the retail store. There is a grand range of colors, with good size and general finish

Sometime ago, I spoke about Camellia as a good plant to be taken up by the plant grower to help fill the gap occasioned by the absence of so many Christmas and Easter offerings that we have been in the habit of getting abroad; consequently I was interested to notice that Mr. Thomas Roland of Nahant has a nice block of camellia coming along, which should be in good shape for next season. He probably will have enough to fill one fair-sized house, and they will be welcomed indeed by the plant buyers.

Mr. William Elliott, in talking to the members of the Boston Florists' Association at their last meeting on the subject of market conditions and prices as they affected the grower, to my mind brought out one very important point and one which is vital to the grower. That was the increasingly large sale every year of artificial leaves and flowers for Memorial Day work. Mr. Elliott thinks that the store man is not playing fair with the grower in pushing the artificial wreaths so hard. He compared the prices of a number of years ago when short roses would go somewhere near \$6.00 per 100 on that particular day, and the price of the past two years when \$2.00 per 100 was nearer the average. Probably the store man will have his side to this argument and we are going to have a chance to hear from him at one of the meetings in the near future, but the fact remains that the grower is made to suffer through the heavy sale of these good-for-nothing concoctions.

In spite of the fact that some of the early bulb stock has been inclined to come blind, it was very pleasing to see such a nice lot of stock at Frank Edgar's place in Waltham. His Golden Spur certainly has done all that could be expected, and all of his bulb stock seems to be of better than average quality.

Two interesting points in connection with bulbs may well be noted. First, the retail store man seems to be holding off this season from buying pan stock. He claims that the price is too

high, and it is noticeable that instead of buying in dozen lots as in previous years it is a sort of hand-to-mouth way that he carries this stock. Now when we think of the price of the bulbs, the labor, and the loss from those that come blind and other causes, it doesn't seem that bulb stock is bringing any more than can well be expected; in fact, to my mind this line does not run as high proportionately as most any other crop.

The other point is that the Hollander who is making his first round of visits now is quoting as high and in many cases higher than the past year. I am not prepared to say whether these high prices are necessary; the conditions in Holland are not known to me. However, the Dutch Bulb Growers' Association have set their prices, and already we can see that this has stopped many a grower from placing early orders. True it is that many wait for the second trip of the Hollanders which comes in the spring, and if I am not mistaken many buyers of bulbs, particularly some of those who have been through the mill for many years and buy in large quantities, are going to hold off until next fall. I have heard several say that there will be a better chance to buy then than now. Let us see if this works out. The fact remains that unless bulbs come down somewhat, the store man can hope for no easing off in price, in fact he may have to pay more.

It is interesting to find that even the seedsmen are taking up the "Say it with flowers" slogan. In the 1920 retail catalogue put out by John Lewis Childs, the national motto stands out very prominently, being lettered at the base of the splendid cut of Autumn Glory Chrysanthemum. Certainly the florists will appreciate this kind of co-operation. Mr. Childs goes even further than this by writing a little personal message about flowers and their value in the home.

The Childs people are noted for the novelties which they feature. Novelties are not very plentiful this year, to be sure, but Mr. Childs has several excellent colored plates in which he illustrates Lythrum Rose Queen, Monarda Cambridge Scarlet, an attractive Veronica, several of the newer dahlias and five of the new large flowering type of Lemoinei hybrid gladioli. The illustrations are always among the most charming features of a Childs catalogue, the color work being splendidly done.

SWEET PEA SCHEDULE FOR 1920.

The schedule of the Twelfth Annual Exhibition and Convention of the American Sweet Pea Society to be held under the auspices of the Massachusetts Horticultural Society in the Horticultural Hall, Boston, July 10-11, 1920, has just been issued.

The officers of the American Sweet Pea Society are George W. Kerr, president; Edwin Jenkins, vice-president; William Gray, secretary; William Sim, treasurer.

Executive Committee—The above officers and David Don, W. A. Sperling, John H. Stalford, James Stuart, E. C. Vick.

Nomenclature and Trials Committee—Prof. A. C. Beal, William N. Craig, George W. Kerr, Leonard Barron.

Trial Grounds—Cornell University, Ithaca, N. Y.

Exhibition Committee—George W. Kerr, chairman, W. A. Sperling, James Wheeler, William Sim, John H. Stalford, William Gray.

Entries must be made on the entry blanks supplied by the secretary, William Gray, Bellevue avenue, Newport, R. I., and mailed to reach him at Newport on or before Thursday, July 8th. Entries in the Massachusetts Horticultural Society's part of the schedule must be made to Wm. P. Rich, secretary of Massachusetts Horticultural Society, 300 Massachusetts Ave., Boston, Massachusetts.

Trade exhibitors intending to enter in the American Sweet Pea Society's Gold Medal Class, the Silver Cup Class, or to make a special exhibit should notify the secretary three days previous to the opening of the exhibition, stating the amount of space they intend to fill.

Entry in the American Sweet Pea Society's classes is free to members of the American Sweet Pea Society. Non-members competing must accompany their entries with an entry fee of \$2.

All exhibits must be staged by 12 o'clock on Saturday, July 10th.

All Sweet Peas exhibited (except in classes for display and arrangements for effect) must be legibly named on cards furnished or approved by the secretary.

ROSE COLUMBIA WINS.

Given the Gertrude M. Hubbard Medal
By American Rose Society

The Executive Committee of the American Rose Society at a recent meeting in New York City voted to award to the hybrid tea rose Columbia, registered in 1917 by E. G. Hill of Richmond, Indiana, the Gertrude M. Hubbard gold medal for the best rose of American origin introduced during the last five years.

This reward was made possible by the generosity of Mrs. Gertrude M. Hubbard of Twin Oaks, Washington, D. C., and has been awarded but once when, in 1914, it was given to M. H. Walsh of Woods Hole, Massachusetts, for the introduction of the climbing rose Excelsa.

The honor which goes to Mr. Hill is distinctive. It is the highest honor which the American Rose Society can confer on a hybridizer, and it is a recognition, not only of a variety of merit but of the valued work of a pioneer in rose breeding—one who has devoted a half century of real service in the advancement of the rose, through breeding a type admirably suited for American conditions.

E. A. WHITE, Secy.

A very good description of Columbia is to be found in one of Charles H. Totty's catalogues. It reads as follows:

"This variety sends up quickly numerous stiff stems which are of good length without pinching, and naturally throws long, stiff smooth stems. It is a free easy grower with beautiful foliage, the leaves spaced just right to please a cut-flower grower and to form a fine setting for the bloom. "A Rose without a thorn, almost!" Thornless for 10 to 12 inches below the flower, as well as very few thorns on the lower stem. Color true pink about the shade of a perfect Shawyer, deepening as it opens to glowing pink; a peculiarity of the variety is that the shades all become more intense until the full maturity of the flower is reached."

RHODE ISLAND HORTICULTURAL SOCIETY.

The seventy-fifth annual meeting will be held in the Lecture Room, Public Library, Providence, R. I. on January 21. At this meeting Mr. K. E.

WE NOW INTRODUCE

Gladiolus "White America"

A seedling of "America," having same habit of growth, form of flower and substance. Color—buds flesh-white opening clear white, with a slight mark of blue in throat.

THE MOST IMPORTANT NEW VARIETY SINCE "AMERICA."
Bulbs—\$2.00 per doz.; \$15.00 per 100; \$125.00 per 1000.

Growers in New England and New York

The Illinois quarantine are greatly aroused by the quarantine just declared by the state of Illinois as the result of the European corn borer agitation.

This quarantine bars out of the state dahlias, gladioli, chrysanthemums, geraniums, corn, broom corn and celery grown in any of the New England states or in New York. It is realized that the scare may readily spread to other states which in turn may take similar action, thus making the situation doubly serious. There are several large growers of dahlias and gladioli in New England and New York who make heavy shipments to Illinois and adjacent states and doubtless will unite in prompt and vigorous action to have this embargo removed and to prevent its being imposed by other states. Mr. J. K. Alexander of East Bridgewater, a very prominent dahlia grower, has been quick to see the danger, and expects a movement which will help to save the business interests of eastern growers. As Mr. Alexander points out, this embargo is wholly unnecessary and entirely unjust. The danger of spreading the corn borer through the medium of dahlia roots and gladioli corms is too remote to even justify consideration. The borer lives over in the stalks, possibly, but these stalks are all cut off before shipment. Moreover, the dahlia roots are cut up into single pieces, and it would be impossible for them to carry the pests. Both dahlia roots and gladiolus corms must of necessity undergo considerable handling which would be another measure of safety. There is still

another point, too, as Mr. Alexander pointed out, at a meeting in Boston last fall. Dahlia roots are always planted commercially five or six inches deep and it was admitted at this meeting that the borers had never been found more than an inch or two under the ground.

Still another interesting phase of the question was encountered in discussing the matter with a prominent Massachusetts grower. It was pointed out by this man that the quarantine notice sent out by the Illinois officials specifies simply dahlias and gladioli without mentioning roots or corms. This man says that as the notice reads it actually applies to flowers or plants. He ships neither, but will continue to cut and ship bulbs and corms, feeling under this notice he has a perfect right to do so.

To some extent chrysanthemums and geraniums are also shipped from New England and New York and of course the growers are hit by this embargo. If there were any real danger or if the quarantine were justified by the facts, the growers would submit gracefully, but they feel that under the circumstances the Illinois authorities have simply built up a straw man for the purpose of knocking him down and that they are laboring under a huge misapprehension in taking this drastic action.

It is significant too, that almost at the same time a notice is being sent out from Washington that the European Corn Borer is not as dangerous a pest as was supposed because when found in the West it has only one brood yearly, making it much more easy to control. Altogether, there is every reason to expect that the New England and New York growers will make a vigorous protest and one which will have results.

It was an exceedingly difficult problem

The rose award with which the executive committee of the American Rose Society was confronted when it was obliged to choose the best rose of American origin in competition for the Gertrude M. Hubbard medal, as reported elsewhere in this issue. About forty roses were eligible, and they included both the greenhouse and outdoor varieties. Moreover, they included varieties which, while well adapted to cultivation in some parts of the country, do not thrive well in others. If reports are true, however, Columbia was the first choice of a greater part of the executive committee. It can well be imagined that Premier, Red Radiance, Los Angeles, Mrs. Moorfield Story and Ophelia Supreme might have warm supporters. Apparently, however, Columbia stood high above all the others in the committee's estimation. Columbia is, of course, a greenhouse rose primarily, and it will be remembered that when the last award was made it was to an outdoor rose, Excelsa, originated by Mr. Walsh of Woods Hole. Possibly the committee purposes to alternate indoor and outdoor roses as a means of avoiding criticism. In the opinion of some people it would have been better had several classes been provided for, or a proper method of scoring arranged which would simplify matters a little. Without much question, the choice of the committee this year will be pretty generally approved, but the time is likely to come, when the competition will be so close that making the award will prove a heart-breaking matter.

The Carnation Convention

Chicago, Jan. 21, 1920.

The annual convention of the American Carnation Society being held here this week was attended by growers from all over the country who are in fine spirits and enthusiastic over business conditions. It must be admitted, though, that the attendance is a little below the average at these conventions. New England is most heavily represented of any distant section. The meeting hall is handsomely decorated. New England blooms led with the most important awards. Maine Sunshine, originated by C. S. Strout of Biddeford, Maine, received the Dorner gold medal. Laddie, shown by S. J. Goddard, was awarded the American Carnation Society's gold medal, and Laddie exhibited by Strout received the Carnation Society's silver medal. Mr. Strout's new crimson, Donald, was given the S. A. F. silver medal.

A display of carnations was made by Mr. Strout and arranged by Mr. C. Englemann, the famous English carnation grower now visiting in this country, attracted particular attention. The flowers were displayed loose, and in small cups on standards in artistic fashion, with foils of green. An unnamed seedling by Mt. Greenwood Cemetery Association took first prize in 100 white.

The nomination of Chas. W. Johnson for president was unanimous. The secretary and treasurer were renominated unanimously.

SECRETARY BAUR'S REPORT.

In part Secretary Baur's report was as follows:

The curtailed premium schedule of last year and the subsequent saving in money, has enabled the society to catch up in a measure with its finances. Prices on all supplies continue high, however, and strict economy must be practiced until either prices moderate or our income can be increased. We were successful in securing an unusual amount of advertising for this year's premium schedule, there being 36 full pages. Our members can make this a really valuable advertising medium by patronizing our advertisers. Plans which are in prospect, make it highly important that you lend your assistance along this line.

It was most gratifying to note that our members are supporting the society most loyally. We have also reinstated 17 old delinquent members during the past year. But why do we

not gain more new members? Some plan that will produce results must be devised. Who can suggest one? Our membership list now stands at 300 annual members and 11 life members. These figures should be doubled. We have lost during the past year Frank A. Friedley, who died on March 9th, Henry Rohrer, who died on April 7th, and Robt. Montgomery who passed away on August 5th.

There was paid into the Secretary's office:

In dues.....	\$ 649.00
For advertising.....	285.00
For miscellaneous.....	82.00

Total\$1,016.00

all of which was turned over to the Treasurer and his receipt taken therefor.

The \$1,000 in the Fred Dorner Memorial fund is not yielding sufficient interest to cover the cost of the Dorner Memorial medal at the present time. Prospects for any material reduction in the cost of this medal in the near future do not seem bright and it would probably be wise to add two or three hundred dollars to this fund in order to again make it self-sustaining, unless the present fund can safely be invested so as to yield a higher rate of interest.

Preparations for the fifth National Flowers Show have been resumed with a view to holding it in 1921. This society should lay plans to maintain its place in the front rank of the special societies by staging the greatest show of carnations ever put on display.

We now have 251 members in the S. A. F. & O. H., which entitles us to representation on their Executive

Board. Our President, Theodore Dorner, has been appointed to serve during the present calendar year. A new rule, adopted last August, provides that all affiliating societies shall pay the expenses of their representatives, instead of their mileage being paid by the S. A. F. & O. H., as was done previous to this year. This calls for additional funds again, if you desire your representative to attend these board meetings.

Seven new seedling carnations were registered during the year and three sports were offered for registration. Six registrations were sent over from England, one a duplication of Toreador, a variety disseminated in this country some years ago.

This society is extremely fortunate in having locally, a man with such energy and executive ability as our Vice-President Chas. W. Johnson. To him is due in large measure, the credit for the efficient manner in which the local arrangements were managed. Our thanks are also due the Chicago Florists Club, the Chicago Retail Florists' Association and The Commercial Flower Growers' Association, for their splendid co-operation in making this convention a success.

A. F. J. BAUR, Sec.

A Protest

—The Illinois Embargo on Dahlias and Gladioli is unjust and uncalled for.

—Nobody knows where the movement thus started will end.

—Growers in New England and New York must unite in a big fight to save their business interests.

—Urgent action is needed. Who is with me on this?

F. E. DORNER, Treas.

NEW ENGLAND'S DELEGATION.

A good sized delegation left Boston Monday to attend the Carnation Convention in Chicago. The party included S. J. Goddard of Framingham, Ernest Sanders and Thomas Pegler of Lewiston, Me., Geo. Buxton of Nashua, N. H., Charles Strout and wife of Biddeford, Me., Walter Link of Arlington, Henry Penn of Boston, Louis Reuter of Watertown and E. Allan Peirce of Waltham. W. D. Howard had intended to be a member of the party but was unable to go because of illness. Mr. Winkler entered an exhibit of Morning Glow in competition for the prize for carnations with the best keeping qualities. The Pattens of Tewksbury sent a box of Ethel Fisher for exhibit. Mr. Strout also took on exhibits of two new varieties, and Mr. Goddard, when he joined the party at Framingham had boxes which were supposed to contain his best examples of Laddie.

THE MARKET.

The market is in a very unsettled condition. Prices quoted at the time of this writing may be entirely changed by the time HORTICULTURE reaches its readers. A united attempt is being made to break prices but is being resisted stoutly. White carnations and mixed splits can be bought for 8c. Choice varieties like Laddie are selling for 16c. or even 20c. Sweet peas are bringing from \$2.50 to \$4.00 per hundred. Callas are proving a fine investment this season. They have been selling readily for \$4.00 in the Boston market and in New York have brought from \$5.00 to \$7.00. It has been hard to fix a price on roses, as much poor stock is coming in and naturally has sold for low prices. Shorts have been selling for from 15 to 20c., while specials run up to \$1.00 each.

Governor Harding, of Iowa, has issued a proclamation setting aside Sunday, Jan. 25, as a day in which to honor American women who served as nurses during the war. He has asked that roses be worn on that day, and no doubt will have the support of florists

NEW ENGLAND NURSERYMEN'S ASSOCIATION.

Program for the Ninth Annual Convention.

The ninth annual convention of the New England Nurserymen's Association will be held at the American House, Boston, January 27 and 28. Some very important questions are to be discussed and it is to be expected that the attendance will be large. The program is as follows:

Tuesday, January 27,
1 P. M.

Roll Call of members.

President's address

Annual reports: Secretary, R. M. Wyman; Treasurer, V. A. Vanicek.

Committee reports: Executive, C. Dow; Membership, F. S. Baker; Legislation, A. E. Robinson; Publicity, E. F. Coe; Transportation, Chas. Adams.

Appointment of Special Committees: Auditing, Nominating.

"What can we Import, and How?" Winthrop H. Thurlow, West Newbury, Mass.

"Standardization of Prices." Harlan P. Kelsey, Salem, Mass.

"The Labor Problem." John R. Barnes, Yalesville, Ct.

6.30 P. M.

Banquet and Entertainment. Walton G. Wyman, song leader; Fred Clark, entertainer.

Wednesday, January 28.

9.30 A. M.

Report of Special Committees.

Election of Officers.

"The Fruit Tree Situation." Paul Stark, Louisiana, Mo.

"The European Corn Borer." D. J. Caffrey, in charge of the Federal Corn Borer Investigation.

"Message from the American Association of Nurserymen." J. Edward Moon, President American Association of Nurserymen.

"Market Development." Ernest F. Coe, New Haven, Ct.

General Discussion.

12.30 P. M.

Lunch.

2.30 P. M.

Public Illustrated Lecture, "What's New in the Garden." E. I. Farrington, Editor of HORTICULTURE.

Remarks, J. Edward Moon.

The present list of officers is as follows: President, C. R. Burr, Manchester, Ct.; vice-president, Charles Adams, Springfield, Mass.; secretary, R. M. Wyman, Framingham, Mass.; treasurer, V. A. Vanicek, Newport, R. I.

Carnation Morning Glow Has Been Sold in the Boston Market for 4 Years

It is there considered a bread and butter Carnation. **The Grower likes it**, because it is free and has no tricks. **The Seller likes it**, because it ships and keeps splendid—and what is best of all—

THE LADIES ADMIRE, AND ALWAYS BUY IT for its fresh, rosy color, just like morning glow. **Morning Glow** is early, free, has a good habit, fine stem and for blooming during the Summer, cannot be beat. While not one of the largest Carnations, it is considered

THE MOST PROFITABLE OF ALL
Cuttings sold by the originator, \$7 per 100, \$65 per 1000
EDWARD WINKLER, Wakefield, Mass.

DESTROYED BY HAIL

Last Summer a florist who had imagined he was outside of the hail section lost upwards of 50,000 square feet of glass by hail with no insurance to recompense him.

He is now a member of the Florists' Hall Association of America.

Profit by experience and join the Association now. Address

JOHN G. ESLEK, Secretary
Saddle River New Jersey

INSTRUCTION IN GARDENING

Practical instruction is offered in vegetable, flower and fruit gardening, greenhouse and nursery practice, together with lectures, laboratory, field and shop work in garden botany, zoology, pathology, landscape design, soils, plant chemistry and related subjects.

The curriculum is planned for the education of any persons who would become trained gardeners or fitted to be superintendents of estates or parks. Students may be admitted at any time. Circulars and other information will be mailed on application.

The New York Botanical Garden
Bronx Park NEW YORK CITY

RAMBLING OBSERVATIONS OF A ROVING GARDENER

I have been very much interested in a circular sent out by the Aurora Nurseries, Aurora, Ill., featuring *Cotoneaster acutifolia* as a hedge plant for the Northwestern country and other cold sections of the United States.

Holm & Olson, of Minneapolis, have been booming this plant for some years and apparently results have justified their faith in it. Most of the *Cotoneasters* have great possibilities, but this one seems especially valuable for climates where ordinary hedge plants are not satisfactory. In its circular, the Aurora Nurseries have the following to say:

Cotoneaster Acutifolia belong to a group of shrubs or rarely small trees of the Rose family, related to the Apples, Pears and Hawthorns. The genus has long been known in Europe and eastern Siberia, but it is only in recent years that it has been discovered that the largest number of species of these plants grow in China. The first Chinese species was known to botanists as early as 1832; forty-five years passed before another of these Chinese plants was recognized and it was not until Henry and Wilson began the systematic exploration of the flora of central and western China that any one suspected its richness in these plants. Now forty-eight or fifty Chinese species and well marked varieties are recognized. Among them are some of the handsomest shrubs in cultivation, and for this climate at least some of the species are perhaps the most valuable shrubs introduced by Wilson. For the embellishment of northern gardens the introduction and successful cultivation of the Chinese *Cotoneasters* rank in importance with the improvements made in Europe in recent years in the garden Lilacs, with the forms of hybrid *Philadelphus* made by Lemoine, and with the collection of American Hawthorns discovered and raised in the last sixteen years through the activities of the Arnold Arboretum.

Cotoneaster Acutifolia is without doubt one of the most valuable members of the family for ornamental and hedge planting. Its growing range for hardiness extends well north into Canada, east of the Atlantic Coast and west of the Pacific. It is one of the few shrubs that can be grown successfully as a hedge plant throughout the cold windswept regions of Minnesota. It will stand any amount of shearing

and its appearances are equally as attractive clipped either in formal outline or permitted to take a more natural growth. It is an individual shrub and assumes a slender, gracefully arching growth with leaves of shiny green.

The flowers are white, borne the entire length of the stems. Each flower is followed in the autumn by a black berry. This fruit remains on the shrub until late in the autumn. After the first frost in the fall, the foliage assumes an attractive scarlet color immensely attractive. It is an excellent plant for large groups on account of the splendid fall color of its foliage. In summing up the merits of this plant, it is certainly a most valuable acquisition to our list of shrubs that have been offered to the trade in recent years.

I have been growing a few plants of *Cotoneaster acutifolia* in my own garden and find it very satisfactory.

Cotoneaster Acutifolia probably came originally from the Orient by the way of the Kew Gardens of England and into this country probably through the experiment Station at Ottawa, Canada. It is one of the most attractive shrubs for hedge purposes, especially clipped hedges. The plant is one of the earliest to leave out in the spring and one of the last to lose its foliage in the autumn. The foliage is dark green, glossy or shiny, and in the autumn on some soils takes on the autumn colors very nicely.

In the article on water gardening by the English authority, Mr. R. W. Wallace, reproduced in *HORTICULTURE* a few weeks ago, nothing was said about water lilies themselves. I find that in the course of his talk before the Royal Horticultural Society, Mr. Wallace made mention especially of the new hybrid water lilies, pointing out that no water picture is complete without them. He went on to say that the majority are of easy growth and increase quickly when once established. "There are," he said, "many varieties, but a few will be enough to speak of." He then continued:

So far mention has not been made of the beautiful new hybrid water lilies. No water picture is complete without them. The majority are of easy growth, and quickly increase when once established. There are many varieties, but a few will suffice. The white *Gladstoniana* is a noble

flower quite unsurpassed, and of pale pinks *Marliacea rosea* and *Colossea* are indispensable. In deeper shades of pink we have W. B. Shaw, very free and sweet scented; *Masaniello* and *Formosa*, and the glorious pink of Mrs. Richmond, quite unique in size and color; the rose-pink *James Brydon*; *Marliac's* masterpiece, the glorious ruby-red *Escarboucle*, and Wm. Falconer, of deeper coloring. *James Hudson* is very free and of a rosy crimson; the pale yellow *chromatella* and *Moorei*, of a deeper shade, a better plant. This short list I have given contains all the best growers and finest colors. Any pool, stream, or lake without their glorious flowers floating on the surface is incomplete.

HOW ABOUT THIS, BOYS?

Here is something that one of our subscribers sends us in high glee, having clipped it from B. L. T.'s Tower of Titters in the Chicago Tribune:

My Love Works in a Greenhouse.

In a quaint New England village,

On a drear October night,

A livery stable keeper met

A maid whose troth he'd plight.

Now he was tall and handsome

In a Denman Thompson way,

And she, O, my! was quite a queen,

She was so tall, yet gay!

The livery stable keeper

When he asked her for her hand,

Attempted to embrace her,

But for this she would not stand.

Why, O why, upon this manly breast

Will you not lay your head?

She looked into his whiskered face,

And this is what she said:

Chorus

My love works in a greenhouse,

And there always is a smell

Of violets and geraniums

Upon his coat lapel.

Now, mind, I do not blame you,

Nor do I make complaint,

But a greenhouse has a fragrance

That a livery stable ain't.

Apropos of the shortage of labor, it might be suggested to young men of promising talent that there are special advantages in greenhouse work, as revealed by these lines.

Fire believed to have been of incendiary origin destroyed the extensive greenhouses at Winchester Hall, the country home at Port Chester, N. Y., of Frank W. Savin, banker at No. 66 Broadway. Many valuable plants were lost, many of which never can be replaced, and the damage is estimated at \$125,000.

The Meyer Florist Threads can be had in any size or color that is wanted. Can furnish same at \$2.25 per lb. with liberal discounts in case lots of 500 lbs. and upwards. Every spool contains 2 ounces of actual thread, 16 ounces to the pound or no sale. Be sure and get the Meyer Threads and take no other.

Flowers Under Glass

ROSE CUTTINGS.

Rose cuttings in sand are in constant danger from spot. In order to prevent trouble from this cause it is important that they be sprayed with copper soon after they have been inserted. Nobody will claim that the trouble can be cured in this way, but it can be controlled to some degree and its spread held in check. Be sure to water the cuttings early enough so that the foliage will be dry when night comes. It is very important at this season to prevent a check to the cuttings such as will surely follow if the houses are allowed to get too cold. The results of such a misfortune will last for a long time.

In making a second batch of cuttings which many of course will be doing now, make a point of using only high grade plants. This will pay in the end in the increased vigor and floriferousness of the progeny. It is worth while to use heel cuttings to as large an extent as possible, for they root extra well, producing good bottom shoots. It is especially necessary to be careful with Beauties and other roses that have considerable blind wood to use only flowering wood. With some florists there is altogether too much waste when cuttings are made. This can be avoided with care, and as fast as the wood is cut it should be immersed in water and then taken to the cellar or packing room to be kept cool and damp until needed. Do not keep the cuttings in water, however. They should be damp but not wet.

STARTING ASTERS.

There is likely to be a good call for asters as cut flowers this season, for they can be sold as a rule at a moderate price. They can be grown readily in any house which has a night temperature of 50, and soil in which carnations thrive will suit them. Some growers try to force plants for a heavy early crop, but this is a mistake because the quality is always inferior. It is better to have flowers in good condition with a light crop than a heavy crop of poor stuff. Red spider often bothers asters, and constant syringing is required to keep this pest in check. When the plants are large enough set them about a foot apart on the benches. Early Wonder has been grown quite extensively because of its early flowering habit, but the flowers

Little Ads. That Bring Big Returns

Little Ads. in our Classified Buyers' Directory bring big returns to both advertiser. Anything wanted by florists, gardeners, park and cemetery superintendents, etc., can be sold through this medium.

Don't fail to read over these Ads. in each issue and you may find one or more that will prove profitable to you.

are smaller than those of Queen of the Market, and as the latter variety blooms much more freely it is to be preferred on the whole.

LEFT OVER PLANTS.

Left-over plants of Begonias, Cyclamen and Primroses which are likely to find a market in the near future should be kept cool and with plenty of ventilation. This also applies to Azaleas if anybody has any of these plants. Canadian florists who were not able to get their Azaleas ready for Christmas can carry them along at any temperature above the freezing point and hold many of them for the Easter trade. Do not, however, let them get over dry.

Now is the time to plan for Stevia cuttings, which simply means saving what old plants will be required, cutting them down and keeping them in a light but cool house. The same treatment applies to Ericas. Poinsettias left over should be kept resting until March or April before they are potted up again. You can usually find a place for them under a moderately dry warm bench.

THE LANCASTER COUNTY FLO- RISTS' ASSOCIATION.

The ninety-second regular meeting of this Association was held in the Chamber of Commerce Rooms Thursday Jan. 15th with a goodly number of the members present with their wives and friends. For visitors we had with us D. J. Keohane of the H. F. Mitchell Co., Dennis Connor of the Lord and Burnham Co., T. J. Nolan of the King Construction Co., and Edw. Reid and his brother from Philadelphia, all of whom made short addresses, Mr. Reid dwelling on the fact that the commission houses are still doing business on the old 15 per cent basis in spite of the fact that all their expenses have gone upward.

The following officers were elected to serve for the year 1920: President W. B. Girvin of Leola; Vice-President, B. F. Barr; Secretary, Albert M. Herr, Treasurer, H. K. Rohrer all of Lancaster

THE BOILER OF Unequalled Fuel Economy

Kroeschell Boilers, the best by test since 1879. Forty years' experience.

THE QUALITY PLACE OF BOSTON

Regarding the Kroeschell, it is the best we have ever had and satisfactory beyond our expectations. It heats up especially quick and has saved us considerably already in the price of fuel. When we are in need of another boiler we will give the Kroeschell the first consideration.

(Signed) WM. W. EDGAR CO.,

CHICAGO

When You Buy—Get a Kroeschell

2,016,286 sq. ft. of glass was equipped with Kroeschell Boilers during the year of 1919.

OHIO'S CELEBRATED CYCLAMEN SPECIALIST

After using your No. 12 Kroeschell Boiler I came to the conclusion that had I to install more boilers it would be the Kroeschell and no other. It really is a pleasure to heat, no trouble to get the desired heat in a very short time.

(Signed) CHRIST. WINTERICH,
DEFIANCE, OHIO.

Advertising That Is Worth While

It is rather amusing to note the assurance with which some people sit down to write an advertisement for a newspaper. Men who would show the keenest shrewdness when spending a few dollars for flowers will spend twice as much for an advertisement which has been prepared with little study and less knowledge. It isn't necessary to hire an advertising expert in order to get results, but it certainly is wise to study some of the essentials of good advertisement. A bulletin which has just been issued by the South Dakota State College of Agriculture and Mechanic Arts is devoted to the preparation of advertising copy and other details of advertising; although designed primarily for farmers it will be found of considerable value to florists, especially those who are willing to take a few suggestions about obtaining publicity. One effective point brought out is that the first paragraph should contain the main points which are to be emphasized. If the first paragraph does not contain the selling punch you will lose the interest of the reader before he gets to your sales argument.

I have thought sometimes that it would be an effective addition to many advertisements prepared by florists if they would give a little description of some of the different flowers which they sell, together with a few words about the way in which they are grown. The public takes more interest in such information than is generally realized.

Strange as it may seem, the results often are not as good when the simple word flowers is featured as when emphasis is laid on a special kind of flower, like roses, carnations or violets. Emphasizing a particular type of blossom seems to meet with the quickest mental response.

In order to know how many words you may write for the body of your advertisement, it is necessary to know how many words of various sizes of type will fill a square inch, then multiply by the number of square inches in the space not occupied by headings and firm name at bottom. If an illustration is used, allow for that. In any computation, also allow for white space. By that is meant, do not figure total space but allow for margin. Solid reading matter is not attractive.

Most ordinary newspaper body type is set in 8 point, for which figure 23 words a square inch, spaced. Display advertising text matter is frequently set in larger type, with measurements approximately as follows:

- 12 point, spaced, 11 words a sq. in.
- 10 point, spaced, 16 words a sq. in.
- 8 point, spaced, 23 words a sq. in.

I read the other day of a man who had remarkable success in selling dressed turkeys, especially those which had not gone very well in the ordinary course of trade, by tying a blue ribbon around the neck of each bird. This may not seem very analogous to a florist's selling problem, and yet it is a fact that the liberal use of

ribbon does much in creating an effective store window and thus helping to increase sales. The accessories are often as valuable as the flowers themselves.

There is one point in this connection which should not be overlooked. Newspaper advertising and good window trimming ought to go together. When a customer is induced to come to your store by good advertising copy, he should find a window, the appearance of which should invite him to enter the store. It has happened in some cases that a failure to observe this requirement has nullified much newspaper publicity.

WHY?

A. H. HEWS & CO., INC.

Cambridge, Mass.

When writing to advertisers kindly
mention **HORTICULTURE****WINTER MEETING OF NEW YORK
FEDERATION OF HORTICUL-
TURAL SOCIETIES AND
FLORAL CLUBS.**

The Albany Florists' Club entertained the New York Federation of Horticultural Societies and Floral Clubs in a most hospitable way on Thursday, January 15. The Federation was represented by about twenty-five delegates from affiliated societies.

At six o'clock a Federation meeting was held in the Rathskeller of the Hampton Hotel, with President F. R. Pierson of Tarrytown, N. Y., presiding. The project for a horticultural building at the State Fair in Syracuse was discussed as were also plans for a more rigid campaign against insect pests and fungus diseases on florists' crops.

Following the meeting the guests joined the members of the Albany Florists' Club in one of the large private dining rooms of the Hampton for the annual dinner of the Club.

After the dinner an address on "Some Principles of Plant Breeding" was given by Dr. R. A. Emerson, head of the Department of Plant Breeding at Cornell University.

Following the lecture F. A. Danker, as toastmaster of the evening, introduced President F. R. Pierson, who spoke of the important work the Federation is doing.

short speeches by President Tracy of the Albany Florists' Club; Werner Bultman, Syracuse Florists' Association; Dr. Erl Bates, Syracuse Rose Society; Louis Menard, James Larcarris and L. H. Schaefer of the Albany Florists' Club, and E. A. White of Ithaca.

At the close of the toasts, Thomas Tracy on behalf of the Albany Florists' Club, presented the retiring president, William Newport, with a silver-mounted carving set, and the retiring secretary, Robert Davison, with a silver-mounted ebony set of toilet articles. Messrs. Newport and Davison responded with expressions of appreciation.

FERNS

THE VICTORY FERN (*Nephrolepis victoria*)

We take pleasure in offering this new and valuable variety of *Nephrolepis*. It is a beautifully crested form of "Teddy, Jr." with fronds frequently subdivided on the ends, making a most unique, distinct, and desirable variety.

This fern was

AWARDED A BRONZE MEDAL

at the S. A. F. Convention at Detroit in August, 1919. The judges of the award reported as follows: "Special stress is laid on the new fern Victory, with a rapid growth and a branching at end of fronds, making it a shapely plant. It should be a commercial success, and we **RECOMMEND IT MOST HIGHLY.**"

Strong plants, 2½-inch pots... \$3.00 per dozen, \$20.00 per 100

NATIONAL PUBLICITY CAMPAIGN.

There has been a steady influx of orders at the Secretary's office for poster stamps and posters for St. Valentine's Day, which augurs well for business on this day. As has been previously pointed out, the cost of this material is very small, and co-operation in a wide use of it must certainly produce direct results.

The February magazines selected for the page advertisement in colors featuring this day are already in circulation, and should exert considerable influence in the direction of sales. In addition to all this, our Promotion Bureau has supplied enough electro-types to florists in all parts of our country to insure that our slogan in connection with pictorial matter bearing suitable reference to the festival will have attention in over two million homes—which means engaging the interest of five times that number of people. To avoid disappointment, florists should order at once. Orders will be filled the same day they are received at the point of distribution.

The Campaign Gives Satisfaction

That the campaign, so far, has given the best of satisfaction is evidenced in the kind comments being received at the Secretary's office from subscribers in all sections. There is much enthusiasm shown in the conduct of the campaign, and the opinion is freely expressed that we should push our work even harder than before. As one subscriber puts it, 'We have got the public going, let us keep them continually in mind of our products.' The number of people who miss an occasion for expressing a sentiment with flowers is less than it used to be, because they can hardly escape the necessary reminder, thanks to our publicity work. It is up to us to see that the reminder is perpetuated.

But we cannot accomplish this without support to our Fund. It does not matter where you are situated, you receive benefit from our publicity work. The idea of deliveries of flowers in distant cities has been greatly encouraged by our magazine advertising. You will have noticed that in all our magazine advertising particular reference has been made to the possibilities in this direction, and business by telegraph is getting to be as common as it was once rare. There is not a town

or community in the United States where such business is impossible. Few families have not relatives and friends at a distance, and all have birthdays and anniversaries during a year which may be fittingly remembered by floral gifts. Flowers are the same everywhere, so there is a standardization hardly possible in any other line of gifts.

If you have not already subscribed to our fund, let us have your support at once. Our Publicity Committee is now planning its work for the remainder of the year, and with your support pledged their plans will be better prepared and better carried out. You need no longer feel that you might be subscribing for something that at best was a "forlorn hope." The campaign has proved its value, its very many friends admit the tremendous impetus it has given to our business.

Help us to help you—you will not regret it.

JOHN YOUNG, Secy.

NEW ROSES FOR REGISTRATION.

Ithaca, N. Y., Jan. 21, 1920.

The following roses have been accepted by the registration committee of the American Rose Society, and if no objections are received within three weeks of this publication the registration will be complete.

Name: Felicity.

Class: H. T.

Parentage: Ophelia × Roosier Beauty.

Description: Upright, strong branching habit of growth; foliage dark green with large, pink rose with silver suffusion; bud long pointed, strong fragrance; petalage 52 in early season; 64 in September; a very free flowering variety producing 155 blooms out of doors.

Originator: Clarke Brothers, Portland, Oregon.

Name: Mrs. Walter T. Sumner

Class: H. T.

Parentage: Ophelia × Hadley.

Description: An upright grower; dark green foliage with a large semi-single flower, carmine shading to deep rose pink; the bud long pointed, very fragrant with 12 to 18 petals; produced 115 blooms out of doors and while buds open quickly the petals hold well on the fully opened flowers; flower produced bloom in clusters of from 5 to 10, and some of the blooms are 5 inches in diameter.

Originator: Clarke Brothers, Portland, Ore.

LADIES' SOCIETY OF AMERICAN FLORISTS.

Cedar Acres,
Wenham, Mass.

January 14, 1920.

To the Members of the Ladies' Society of American Florists.

The gavel, your President's symbol of power, came to me to-day, reposing on a bed of rose leaves, all bound round with rose pink ribbon and tagged with a little silk Wild Rose. Your gracious retiring president, a loyal florist's wife, and ever mindful of the fitness of things, paid you her tribute and Said It With Roses. The message is so significant, that I am passing it on to each and every member.

The Garden Gate of the New Year has been opened for us, upon a rose strewn path and it must be not only our pleasure, but our duty to keep it rosy.

The president of the Society of American Florists remembered us with courtesy in his message, and it is my great privilege to extend to him, our greetings and our hearty congrat-

ulations on the very efficient manner in which he has undertaken his duties.

I am proud indeed to hold the honored position of your president, and very anxious to prove myself worthy of the trust. My success will but reflect your co-operation, without which no president can be a success. I bespeak for your officers, your Board of Directors, and your committees your loyal support and your absolute confidence.

Throughout the year there is little of purely society matters to engage our attention, and for this reason I would greatly appreciate any items of interest from or about members. News from the clubs which have been formed in several cities, news from the widely separated localities.

Individual effort, if focused on the single idea, to make the Ladies' Society of American Florists a force in florists' activities, must surely produce results. To this end, let every member consider herself a self-appointed committee of one to work for the betterment of the society.

I shall be in New York during the Flower Show in March and shall be

very glad to meet any members who may attend, to give and receive any information helpful to the members and to the society in general.

Very sincerely yours,

KATHRYN BEACH TRACY, Pres.

No. 5

THE TALK OF THE TRADE

In the past there has been more or less talk about Carnation Laddie being purely a fancy variety, with no fragrance, and poor keeping qualities. But everyone at the Chicago Convention admitted that the color, stem and size were all that possibly could be asked for. Those of us who thought that Laddie was a poor keeper were certainly mistaken. The blooms that Mr. Goddard showed at Chicago and which took the gold medal were picked from ten to twelve days. They had excellent color, carried their heads on fine stiff stems and kept with the average of the show, in fact, there were quite a number of the commercial varieties which could not hold out with Laddie when it comes to keeping qualities. As to fragrance, while it is not one of the very fragrant varieties, we cannot say that it is entirely lacking in this point.

When we come right down to facts, what would that Carnation Show in Chicago have been without Laddie? Those wonderful vases of Messrs. Strout, Goddard, Campbell, and blooms from the greenhouses recently purchased from Joseph Hill by members of the Amling Company, were the shining lights of the show.

Many from the East who are acquainted with Mr. Winkler's Morning Glow, really expected to see this variety lead out in keeping qualities, but Maine Sunshine received the first award. There cannot have been much difference, nevertheless, for Morning Glow at the end of the show stood up as fine as could be asked for any carnation.

Among the new carnations which showed up well in Chicago and are worthy of notice are Strout's new crimson, Donald, which was awarded the S. A. F. silver medal.

The variety Denver, exhibited by the Washington Park Floral Co., Denver, Col., is an Enchantress colored sport of Mrs. Ward, and took the first prize for 100 light pink. It looks very well in the exhibition hall, has good size, form and stands right up as it should.

An unnamed seedling by the Mt. Greenwood Cemetery Association took

first prize for 100 white. This is a pure, glistening white, of excellent form and stem.

Besides those mentioned, Mr. Strout also had a sport of Matchless which was very striking in color. It was similar to the old Prosperity, but more highly colored.

Besides carnations, there were a number of novelties, including two new lavender freesias, Viola and General Pershing, shown by A. Henderson Co. The new Solanum Holly Berry, was shown by Carl Hagenburger, the cherry king. This is the result of a cross between Cleveland and Melvini, followed up by several years of careful selection. Mr. Hagenburger says that this strain is well fixed and does not revert to the older type. The berries are somewhat smaller than Cleveland, are a deeper red, and the small plants he showed carried a remarkably heavy crop of berries.

There was a new sport of Begonia Chatelaine called Pride of Newcastle, shown by Wm. J. Beck of Newcastle, Pa. This variety has very good color, being a decided scarlet shade, and gives every appearance of carrying the same growth as Chatelaine. J. A. Peterson & Sons showed Peerless, a new begonia seedling which is similar to Mrs. Peterson.

Ball's Giant Calendula attracted the attention of growers on account of their unusual size and very double high-built center. The color was very deep orange, and if this strain can be procured and finished the way these flowers were shown, it is sure to be valuable to the commercial florist.

The Fred H. Lemon Co. has a very fine geranium which they claim is particularly good as a pot plant, but can also be handled with good results outside for bedding-out purposes. This is the variety Alice Lemon. In color it is a light flesh pink, with a brilliant apricot zone. It lights up extremely well and is not altogether unlike the Pelargonium Lucy Becker. Pot plants of this variety are taken up quickly by the retail trade, and as it has such a good habit of growth for pot plant purposes it is easy to finish well and

makes a creditable crop as so many of the troubles prevalent to the pelargonium are eliminated.

Another novelty seen at Mr. Lemon's place is a white double form Malacoides. This new white sort is identical in every way with Malacoides rosea, and we believe it will be sent out to the trade the coming season.

The formation of the National Growers' Association means the addition of another allied society to the S. A. F. Temporary officers were elected in Chicago with F. C. Brown, president, J. Fred Ammann, secretary, and the appointment of Messrs. W. R. Pierson, Kerr and Gullett as a committee on by-laws, to report at the S. A. F. convention in Cleveland next August. There certainly is a place for the National Growers' Association, and there is a possibility that it will do much good work for the trade.

Carnation men back from the Chicago Convention have very pleasant words to say about the way in which Mr. Engelman set up the Strout display. Certainly the English visitor has a deft way in the arrangement of flowers. In general, however, the scheme did not differ greatly from that which was carried out by Samuel Goddard at Horticultural Hall in Boston, a few years ago. Mr. Engelman used about 600 carnations in his work. He was given a silver medal by the Society and Mr. Strout was awarded \$50.00, which will help pay for the flowers used.

Mr. A. A. Pembroke, of Beverly, Mass., was not present at the Convention, and resigned as a director. Mr. Goddard was elected to fill his unexpired term, while Mr. Strout was made a director for five years. Thus it is that when it comes to carnations, New England has to be recognized, for its growers are among the leaders in the field. It has been hoped that the next convention would come to New England, possibly to Hartford, but it is difficult to buck Washington whenever that city sets out to obtain a convention. After Washington has its turn, a New England city will undoubtedly be chosen.

Washington having been selected for the convention, it was natural that a Washington man should be elected

vice-president and doubtless he will be president next year. In D. G. Grillbortzer, an excellent choice was made. He is known as an energetic, live wire and always a booster for the Carnation Society.

Several of the New England delegation stopped at different cities on their way to Chicago. Mr. Goddard, Mr. Buxton of Nashua, and Mr. Pegler

of Lewiston spent some time at the Dorner place in Lafayette and were greatly impressed with what they saw there. From there they went to Indianapolis and looked over the splendid houses on the Baur place. The Ruth Baur showed up in excellent shape, and the New England men who have a good stock on hand feel confident that it will be a winner when the flowers are put on the market next year.

Convention of New England Nurserymen

The Annual Convention of the New England Nurserymen's Association, which was held at the American House, Boston, Tuesday and Wednesday of this week, was largely attended and many interesting points were brought out, despite the fact that several of the expected speakers, including J. Edward Moon, president of the American Association of Nurserymen; Ernest F. Cole, of New Haven, and Paul Stark of Louisiana, Mo., were unable to be present because of illness. President C. R. Burr, of Manchester, Ct., presided at the session and the following officers were elected to serve for the coming year:

President, Charles Adams, Springfield, Mass.

Vice-president, John K. M. L. Farquhar, Boston.

Secretary, Sheldon M. Robinson, Lexington, Mass.

Treasurer, V. A. Vanicek, Newport, R. I.

Executive Committee—C. R. Burr, A. P. Horne, Manchester, N. H., and C. E. Dow, of Bar Harbor, Me.

The Association went on record as opposed to Quarantine 37, as it now stands. This Association also voted in favor of daylight saving, although the vote was by no means unanimous.

The new president, Mr. Adams, said a few words in accepting the honor. Mr. Farquhar emphasized the necessity of having the work of the Association continue through the year instead of being confined to the annual convention. He also said that in his opinion the nurserymen should not attempt to gouge the public by charging abnormal prices for stock. He thought that they should receive reasonable prices, but that it was of more importance that they should keep the public in a buying attitude, for it was on this ground that the success of the future depended.

One of the most interesting papers on the opening day was that of Harlan P. Kelsey on the Standardization of Prices. In part Mr. Kelsey said:

My own practice has been to fix a standard price which is the published price, with 25 per cent discount to the trade and 10 per cent discount to landscape architects and public institutions. A fair question arises if this allows a sufficient margin to the trade, particularly where packing charges are added, while with retail sales packing is free. Most nurserymen maintain

PRESIDENT CHARLES ADAMS that the trade discount should range from 33 1-3 to 50 per cent on what we are here calling the "standard price" or price granted to the ordinary retail buyer; while only a few days ago I received a letter from a nurseryman stating that he expected a 100 per cent margin. That is, he expected to sell either wholesale or retail at 100 per cent advance on the cost of the stock to him.

Now, should the "standard price" be a wholesale price on which percentages should be added to arrive at fair landscape architects and retail prices,—assuming that the landscape architect should get a better than the retail customer's price,—or should the retail price be the standard price, and

any other price arrived at by discounts? My own belief is that the latter is the best method as it will tend to make the average standard price higher. Also, if in fact the wholesale discount runs from 33 1-3 to 50 per cent below such standard price it tends to keep from the general public eye the trade prices, as they would not appear in published form. On the other hand, fixing the "trade" price as the standard price, enables the nurseryman or dealer who purchases to soar to any retail heights that his retail customer may be persuaded to pay, and to many this will make a distinct appeal. In any event those who are legitimately in the trade should agree as to which is really the most proper method of arriving at the standard price.

A way out would be found of selling at reduced prices to those in the trade, to institutions or to the retail buyer under restricted conditions that would save a bulk of loss, and further I believe it would stimulate the use of nursery stock in general and at fair prices. The bargain sales of the dry-goods merchant do not seem to affect in the least his standard prices after the special sales are over.

That the present standard prices of nursery stock, however arrived at, are too low, no one will deny.

The well-known florist Mr. William H. Elliott in a recent paper on the cost of rose growing at the present time, states that the increase in prices should be at least 300 per cent over pre-war prices.

May we not agree that the first thing to do is to find out just what our plants are really costing us and do it by more scientifically accurate and conclusive methods. We believe that nurserymen as a class of tradesmen have not pulled together as well as people in other trades and businesses. I believe the question of fixing a correct standard price is not so serious or difficult as is the question of having all members in the trade stick to a standard price for a standard article at a standard time. Surplus can be handled by special methods and arrangements.

A certain well-known western nurseryman in visiting me last summer told me my prices should be increased 50 to 100 per cent and gave good-sounding reasons. With alacrity and rejoicing I immediately jumped my current catalog prices to meet his views, thinking that at last both of us would now actually make a little profit the coming season, only to find after my catalog went out that on most of

the standard articles, particularly in evergreens in sizes running from 12 inches up, this same firm was underselling me from 50 to 100 per cent! Beautiful co-operation, was it not, of the one-sided variety in which the nurserymen of America is such a past-master! The lesson is only too obvious and discouraging, yet is it really necessary for us still to feed upon such wormwood and gall (and the Devil take the hindmost) when we might truly **get together**, and working out our problems with mutual intelligence and honesty of purpose, contrive to make enough to vary the individualistic wormwood diet occasionally with, let us say, lolly-pop or a stick of chewing-gum."

Mr. Paul V. Fortmiller, of Jackson & Perkins Co., Newark, N. J., spoke on the fruit tree situation. He said that there was a distinct famine in fruit trees at the present time and that the crop is short, while the demand is very strong. He said this was due partly because of the fact that many small growers have gone out of business in the past few years, and partly because seedlings are very short, both in this country and across the water. He said that there would be more French seedlings next year, but that the price would remain high, for it seemed to be a theory of the French growers that as long as the Americans had ruled out many plants they should be made to pay high for what they did get. He believed that it would be three or four years before fruit trees would be plentiful enough in this country so that the prices could be reduced materially, and he could not see how nurserymen could charge less than thirty or forty cents a tree at present, as the seedlings cost them fourteen or fifteen cents before any work was done upon them at all.

The final meeting was public and the principal feature was an illustrated lecture on "What's New in the Garden," by E. I. Farrington, editor of HORTICULTURE. Many lantern slides were used to illustrate the newer plants, both shrubs and perennials, which had been brought into general cultivation in the last few years.

The nurserymen had considerable discussion of a slogan which they propose to adopt and to give wide publicity. This slogan is to read, "Make ours a land of fruit and flowers." A sample design was submitted, but it probably will be improved somewhat before being finally adopted.

Six new houses are to be put up by the J. C. Rennison Co., of Sioux City, Iowa.

WE NOW INTRODUCE

Gladiolus "White America"

A seedling of "America," having same habit of growth, form of flower and substance. Color—buds flesh-white opening clear white, with a slight mark of blue in throat.

THE MOST IMPORTANT NEW VARIETY SINCE "AMERICA."

Bulbs—\$2.00 per doz.; \$15.00 per 100; \$125.00 per 1000.

Plant prices

It is apparent from the catalogues that shrubs, perennials and other stock will cost considerable more this year. In many instances the advance averages about one-third. There seems to be a fair amount of the larger nursery stock, at least in the more common lines. Little difficulty will be encountered in providing customers with the shrubs they demand. Perennial plants, on the other hand, are distinctly short, owing to labor difficulties which have interfered with propagation. Increased costs all along the line, together with short supply, are sufficient in themselves to bring about an upward movement. Moreover prices before the war were lower in many instances than they should have been. Nursery employees will insist upon better wages in the future, and just now it is difficult to get help at anything like even a reasonable wage. Some nurserymen have seen a large proportion of their employees flock to the factories or to industrial centers where abnormal rates of pay are to be obtained. Doubtless there will be a readjustment after a time, but in the meanwhile the trade must suffer more or less. It would be impossible, or at least a short-sighted policy, to raise prices too sharply. It is most important that the public be kept in a friendly state of mind which will bring about liberal buying. It takes a long process of education to get the public to a point where it will buy steadily and regularly each season for the purpose of adding to the beauty of the home grounds.

Cooperative Advertising

It looks as though England might teach this country something in the way of cooperative advertising. The horticultural trade of that country are now discussing a proposal which goes far ahead of the National advertising campaign being carried on by the florists of America.

It calls for a united effort on the part of seedsmen, nurserymen, growers and florists to promote the cultivation of flowers and the making of gardens. All this is bound to result in a greater demand, not only for seeds and nursery stock, but also for cut flowers and potted plants.

In a recent issue of the Horticultural Trade Journal, Robinson Bros. set forth the whole situation as follows:

"A measure is needed to maintain and promote public interest in gardening lest it fall to the position it occupied in the life of the masses before the war and the nation's need.

"Means are required to make every family man realize what a garden means to his family in happiness and health and to the general improvement in home life.

"A gardening atmosphere needs creating which will influence the everyday life of the average man—make him feel that a garden's the thing and a garden he must have.

"Improve the status of gardening and the Horticultural Trades in the public's mind and elevate both to a position of importance in the life of the nation.

"Current general labor conditions are highly favorable to the project in as much as the working day is much shorter, wages higher, and the desire for a more comfortable standard of living pronounced.

"In the elevation of the trade as a whole there is profit for all individual traders.

"Advertising alone can accomplish universal interest in gardening with its result and profit to individual Traders. The type of advertising required is not the "Buy So & So's Seed" variety, but an appealing advocacy for gardening as a brightener of home life and a contributor to the health and happiness of the artisan-cum-gardener and his family.

"A clear understanding of the public to be appealed to, the right type of appeal, and enough money to appeal big enough and often enough, are essentials. But, given these necessary factors and the individual personal support of all the trade, the enterprise should have a permanently profitable effect upon the business of every individual horticultural trader throughout the country.

"The cost of developing an effective scheme will be between £5,000 and £10,000, an amount which should not be difficult to raise from among the various horticultural commercial interests of the country, which include seed growers, seed wholesalers, and seed retailers, and the manufacturers and distributors of horticultural tools, the manufacturers and distributors of horticultural sundries such as fertilizers, etc., and the proprietors of the amateur gardening press."

Evidences abound on every hand to show that the "Say It With Flowers" campaign is proving effective. An interesting instance

is reported from a Massachusetts town. In an account of a Common Council meeting a reporter wrote:

"They certainly said it with flowers, so many bouquets were thrown." This shows that the slogan of the S. A. F. is coming into every day use, and no doubt similar examples will be rapidly multiplied in the near future.

Already the national phrase is getting into the public prints frequently, but not always in the joke column. Strickland Gillilan is responsible for the following in the Retail Public Ledger of Philadelphia:

"Ouch!" yelled the punk comedian, as he dodged a fusillade of spoiled vegetables, "Why don't you say it with flowers?"

Just then a harder and larger missile came over the footlights, and an ice cream ad. reader yelled out, "Take home a brick."

George Watson's
Corner

"You in your small corner and me
in mine."

We had a pleasant call from John Bodger the noted California seed grower on the 24th inst. He is to start from New York City in about a week on a trip to Europe to see how the seed business is across the water. While in London he will take Howard M. Earl's advice and put up at the Norfolk Hotel, Surrey street, Strand. Howard says this is the seedsmen's headquarters in London—with large caps on the "THE." The manager of the house, Mr. Baker, knows the personality of the seed trade well and makes his visitors feel at home, feeds them well, doesn't overcharge them, and one doesn't have to wear a swallow tail all the time. He can also let you have something to wet your thrapple with, which is more than the Dooner boys in Philadelphia can do now-a-days, even if their time honored hotel does still remain the seedsmen's headquarters for Philadelphia, as does the Sherman House in Chicago or the Quincy House in Boston. So if any of my horticultural friends go to London remember that the Norfolk is the stamping ground of Hugh Dickson of Belfast, Howard Earl of Philadelphia, and John Bodger of California, and is the seedsmen's headquarters within hearing of Bow Bells. And ask for Mr. Baker. He's a braw laddie from all accounts.

In regard to the seed trade on the other side at present I quote from a letter just received from one of our Yankee boys who is over there just now looking things up. He writes from Edinburgh under date of January 5th: "In spite of the rate of exchange I am doing some business and have found the trade quite optimistic. Have had an excellent time in Edinburgh, but heaven help the man who lands here on the Sabbath day and knows no one. It is worse than dear old Philadelphia. God bless her! I should say that time is ripe again for a boom in agricultural seeds but I understand many sorts of grasses are still in short supply. Your friend, David Bell, of Leith, was in a conference when I called there so I only saw his seed buyer."

In regard to the rate of exchange we hear that some of the Canadian seedsmen have been cancelling orders

placed on this side, six, nine, twelve months ago on that account—or as they put it—because the American dollar has gone up. But no doubt arrangements satisfactory to both sides can be arranged if a little give and take is manifested for old times sake and looking to future business.

Mr. and Mrs. John Westcott celebrated their golden wedding anniversary on the 21st inst. A vase of fifty roses decorated the dinner table—among other mementos. They were the "extra specials" for which the Pennock Flower market at 16th and Ludlow is famous; and, while the card was marked "from your Ludlow street friends," the kindly, thoughtful spirit of Samuel S. Pennock and Edwin J. Fancourt was back of it all. Mrs. Westcott was especially delighted. The boys don't often get a chance to wave the flag for her—like they do for the Commodore. Of course old associates like A. B. Cartledge and many others, remember the golden occasion, and the officers of the F. T. D. sent a telegram in their own names—William F. Gude, Washington; Philip Breitmeyer and Albert Pochelon, Detroit; William L. Rock, Kansas City, and William Smyth, Chicago—which meant, of course, not only their own personal congratulations but that of the whole florist trade of the country, as Mr. and Mrs. Westcott are well known far beyond local confines and highly thought of by all who know them.

James M. Thoires has purchased a property at Oaklyn on the White Horse Pike, a few miles south of Camden and will shortly move his family and make his residence there, from his present location at 524 Market street, Camden, N. J. Mr. Thoires is still in active business as a retailer in Camden, and intends to remain at it for a long time yet although he has worked hard on the same spot for the past thirty-two years, made a competence and is well able to retire.

Andrew F. O'Connell

Andrew F. O'Connell, a well known nurseryman and contractor in Philadelphia died at his home, 4103 Girard Avenue, on the 21st inst. He did most of the city street tree planting through the Ashbridge, Reyburn and other administrations, and his work was creditable to him and above the average during the political regime that has now become a thing of the past. His place of business was known as the Overbrook Nurseries on city line near the suburb of Overbrook. Interment was at St. Agnes Cemetery, West Chester, Pa., on the 26th inst.

GENERAL NEWS NOTES

Chicago florists have adopted the plan of co-operative advertising which has been in operation in Milwaukee for some time. At a recent meeting Joseph Pollworth said that if a grower averaged a return of five cents on carnations at wholesale, and this average were increased to six cents in cutting from ten thousand plants, his income would be increased \$1,500 under the Milwaukee plan, at a cost to the grower of only \$45.

Lack of help continues acute in many sections of the country. Some florists are obliged to curtail operations on this account.

The Edgeplain Floral Co. has been formed by Elwood Heacock, son of the late Joseph Heacock, and the company capitalized with a stock of \$100,000. A 75-acre farm has been purchased at St. Leonards, about 20 miles from Philadelphia, and a contract has been placed with the Lord & Burnham Co. for a new greenhouse 70x600 feet for roses.

Charles A. Dards, a well known New York florist, is now on a four months' cruise to South America.

The Monmouth County, N. J., Florists' Association has elected these officers: President, John Kennedy, Redbank; vice-president, Fred Hanson, Asbury Park; secretary, Walter Lindhardt, Long Branch; financial secretary, George Sodemann, Long Branch; corresponding secretary, Chas. W. Schneider, Little Silver; treasurer, George H. Gregory, Spring Lake.

NORTH SHORE HORTICULTURAL
SOCIETY.

Manchester, Mass.

Jan. 20, 1920.

After a lapse of five years it has been
decided to resume the annual banquet
of the society. This event will take
place on Wednesday evening, Feb. 4,
at 6.30 p. m., and will be held in Horti-
cultural Hall.

The banquet will be furnished by A.
Schleiber of Lynn, and will be fol-
lowed by an entertainment and dance.
Tickets will be \$2.00 each; the society
will be glad to welcome all visitors.
A train leaves Manchester for Boston
at 10.23 p. m.

NOTICE TO ORCHID GROWERS:

Summit, N. J., Jan. 20, 1920.

In regard to quarantine No. 37 restricting the importation of orchids:

Your chairman has been in communication with the Federal Horticultural Board for some time with a view of obtaining a hearing before the Board and to have the embargo on orchids lifted.

A communication from the Federal Horticultural Board has just been received and reads as follows:

"In response to requests for a conference on the subject of the restrictions on the importation of orchids, the Board has made arrangements for such a conference on February 10, 1920, at 10 o'clock, in the office of the chairman of the Board, United States Department of Agriculture, Washington, D. C. Your attention at this conference will be appreciated."

Signed, C. L. MARLATT,

Chairman of the Board.

The above speaks for itself and needs no comment.

While your chairman holds a great many credentials from the foremost orchid growers in this country authorizing him and the committee to act for them it is but fair that as many as possible should attend the conference personally. No other notice will be sent out, hence it behooves you to remember the date of the conference, Feb. 10, 1920; place—office of the chairman of the Federal Horticultural Board, Department of Agriculture, Washington, D. C.

JOHN E. LAGER,

Chairman, Orchid Committee.

MR. MEADER HAS A NEW REFRIGERATOR.

It helps a lot when a florist can keep on such good terms with his local newspaper as to get a pleasant free reading notice on occasions. Evidently Pres. Meader of the American Gladiolus Society stands well to the reporters of his town, for a recent number of the Dover, N. H., Tribune contains the following:

"Herbert E. Meader, proprietor of popular Third street flower shop, has received a handsome McCray florists' refrigerator, one of the most modern fixtures of the up-to-date flower store. It has seven departments in which flowers and plants may be kept at an even temperature the year round, and is ornamental as it is useful. A handsome variety of modern pottery ware for plants is also now displayed at the Third street flower store."

Carnation Morning Glow Has Been Sold in the Boston Market for 4 Years

It is there considered a bread and butter Carnation. **The Grower likes it**, because it is free and has no tricks. **The Seller likes it**, because it ships and keeps splendid—and what is best of all—

THE LADIES ADMIRE, AND ALWAYS BUY IT

for its fresh, rosy color, just like morning glow. **Morning Glow** is early, free, has a good habit, fine stem and for blooming during the Summer, cannot be beat. While not one of the largest Carnations, it is considered

THE MOST PROFITABLE OF ALL

Cuttings sold by the originator, \$7 per 100, \$65 per 1000

EDWARD WINKLER, Wakefield, Mass.

DESTROYED BY HAIL

Last Summer a florist who had imagined he was outside of the hail section lost upwards of 50,000 square feet of glass by hail with no insurance to recompense him.

He is now a member of the Florists' Hall Association of America.

Profit by experience and join the Association now. Address

JOHN G. ESLER, Secretary
Saddle River New Jersey

INSTRUCTION IN GARDENING

Practical instruction is offered in vegetable, flower and fruit gardening, greenhouse and nursery practice, together with lectures, laboratory, field and shop work in garden botany, zoology, pathology, landscape design, soils, plant chemistry and related subjects.

The curriculum is planned for the education of any persons who would become trained gardeners or fitted to be superintendents of estates or parks. Students may be admitted at any time. Circulars and other information will be mailed on application.

Little Talks on Advertising

It would be surprising to the average man, in the florist trade or out of it, to learn what a large amount of space is used in the local papers by retail flower stores. Hundreds of florists are trying out the results of an advertising campaign of some sort. All too often, however, the results are not commensurate with the money expended, just because the copy is not so worded as to draw trade. It is said that almost everybody thinks that he could edit a newspaper or if necessary sit down and write a book. It must be the same with advertising. The average merchant apparently considers it the simplest matter in the world to cook up an advertisement which will compel buyers to flock to his store. If they don't come, he usually blames the paper and not the advertising copy.

Of course it is useless to dogmatize on the matter of advertising. Many different factors enter in the question, and what may prove a strong drawing card in one place may give only indifferent results in another. Still, there are some fundamentals that no advertiser can safely overlook. For one thing he must be definite and to the point. An advertisement which may be ever so attractive to the eye and perhaps a literary gem in its phraseology may yet exert almost no pulling power. Even an advertisement of this kind cannot be set down as worthless or as wasted, for in the long run anything which keeps a dealer's name before the public helps his business. Many national advertisers have that one purpose in mind.

But the retail florist wants immediate results, as a rule, and must construct his advertisements accordingly. I have a whole fistful of retail advertisements from different New England papers. Let us look at some of them. Here is the copy used by A. Gabicke of Burlington, Vt. He takes double column space to say in large type:

Fresh Cut Flowers and Plants for all Occasions.

No doubt Burlington people will bear Mr. Gebicke in mind when they want flowers or plants for a special occasion, but there is nothing about the ad. to make them want flowers now. Quite different is the copy used by The Myers Flower Shop of 936 Chapel street, New Haven, Conn. Mr. Myers makes a definite suggestion in his advertisement. In three or four inches of single column space he says:

If you know
some person

who is sick,
send them
flowers.
It will cheer
them up.

Here is a specific reason for buying flowers this very day. Doubtless many people never have thought of expressing their sympathy in this way. It is unfortunate, though, that Mr. Myers is not more grammatical, for this fault in the copy might prejudice educated

The Best Retail Ad. We Have Seen This
Week

people against the store. This ad. might read, "If you have friends who are sick," etc., to keep the plural form throughout the sentence.

I think that C. Quadland & Sons of North Adams, Mass., make a mistake when they start off their ad. with the adapted phrase, "Eventually you will be our regular flower customer. Why not start now?" There is something about the assurance of this statement which will offend many people. It will seem to them that the advertiser is taking altogether too much for granted. The Quadlands have a second line, however, which is as good as the first is poor. It reads: "Our flowers are not cut until ordered by you, assuring you of absolute freshness." Of course all florists cannot make such a claim and live up to it, but it must make a strong impression on a prospective

purchaser and influence him toward the store which presents such an inducement. And, after all, that is what counts.

Finally, I have the advertisement of a Haverhill, Mass., flower store which occupies only two inches single column, and yet which by its wording and display must pull no little trade. It reads as follows:

FLOWERS ARE A NECESSITY

—at all social gatherings. We are specialists in preparing corsage bouquets to be worn at dinners, dances or other evening occasions. Phone orders filled.

THE MARKET.

The market is extremely quiet and has been for the past week. Shipments are coming in very slowly and the demand is so small that even the light offerings are sufficient to meet it. Carnations are selling at 12 and 15 cents as HORTICULTURE goes to press, but if anything like heavy consignments should show up, undoubtedly the price would break in half. But shipments to New York are cleaning up everything in sight.

Callas are coming in a little more freely and the price is a little easier, but three and four dollars is obtained readily for good quality stock.

THE ILLINOIS QUARANTINE.

Flowerfield, L. I., N. Y.

Jan. 27, 1920.

Dear Sir:—I note with interest your editorial on the Ill. quarantine, and I think it is time that concerted action is taken by the Trade in regard to these quarantines, mainly for the reason that there is no proof presented that they are necessary.

As Mr. Alexander has pointed out, the Corn Borer may possibly live over in *Gladiolus* stalks, but there is no likelihood of its living in, or being carried by, the *Gladiolus* bulb.

Then again, I think the present quarantine is unreasonable and unjust to dealers on Long Island which is entirely surrounded by water, and although belongs to New York State there is not as much reason to quarantine it, as other states that join N. Y. State by land.

What future is there for Floriculture in this country if it is going to be dealt these "body blows" repeatedly.

Yours very truly,

I. S. HENDRICKSON,

JOHN LEWIS CHILDS, Inc.

Flowers Under Glass

It is a good time to get in Ten-weeks Stock, the market for which is likely to be very good indeed. Candytuft put in now will be ready for Memorial Day. Calendulas have increased in popularity in the past few years so that they are now a staple product in some markets. The spring crop should be started now by sowing the seeds in rows 24 inches apart. The seedlings must be thinned out until they stand 10 inches apart in the rows. There is even time to sow sweet peas of the Spencer varieties. All of these annuals will thrive in a temperature which runs about 50 degrees at night.

If you found the cherries profitable plants this season you should start now preparing for next year's stock. You can root them readily in a moderately warm propagating bed, afterwards potting them up in three-inch or smaller pots. A night temperature of 50 to 55 degrees will keep them growing well, but they must have a good light house and be syringed frequently.

The morning hours are always the best for making cuttings and this is particularly true as applied to carnations. Do the work of trimming them up in a cool place, first having dipped them in cool water. Get them into the propagating benches as soon as possible and spray them every bright morning so that the foliage will be moist during daylight hours, but make a point of having the leaves dry when night comes on. While they need much shade at the beginning they should gradually be accustomed to the sunlight so that they will enjoy full sun by the time they are potted up. Properly treated there will be but little wilting after potting.

Make it a point to pot up just as soon as the cuttings are ready, and use new, fresh soil that has been carefully screened. If the soil is reasonably moist and potting is firmly done, the cuttings will take hold quickly, especially if a little shade is given for a few days before exposing them to the full sunlight.

WINTER SOWING OF SWEET PEA SEED

Writing in the American Sweet Pea Bulletin, William Gray says:

"It is a well-known fact that if conditions are favorable sweet peas sown in the fall give much earlier and finer bloom than those sown in the open in the Spring, but few localities are favored with climatic conditions suitable for fall sowings in the open to winter successfully and the practice is a hit or miss even with the most expert growers. Spring sowing to the open has been the general practice followed and this has its faults inasmuch as it does not allow sufficient time for the young plants to become thoroughly established before warm weather sets in and in consequence inferior blooms are the result.

The pot method, however, overcomes all these uncertainties, the seed being sown either in the fall or during January or February and wintered in cold frames or cool greenhouse.

If sown in the fall it is best to sow not later than October so that the young plants may become established in the pots before the short days of year arrive, later sowings will be inclined to weakness owing to the absence of the sunny conditions necessary to build up vigor in plant life, and much better results will be had by waiting until the middle of January when under the influence of longer days with increasing sun-light, strong, vigorous plants can be grown.

The seed may be sown directly in the pots one seed to each pot or several according to the size of the pots, or the seed may be sown in pans or flats and afterwards transplanted to the pots. If the highest culture is aimed at it is preferable to grow a single plant in each pot. plants grown from fall sowings being carried up to the end of January in 3 or 3½ inch pots, and then given a shift into 5 or 6 inch pots which will carry them through nicely until planting time in the open ground. On shifting stick short brush in the pots to keep the plants upright.

January and February sowings can be carried through in 3 or 3½ inch pots until planting time in the open ground.

Plants from fall sowings will bloom earlier and be at their best over a much longer period than January sowings for the advantage gained lies in the earlier start which brings them into bloom the end of May being at their best throughout June a period more suitable to the sweet pea. January and February sowings come into bloom

THE BOILER OF Unequalled Fuel Economy

Kroeschell Boilers, the best by test since 1879. Forty years' experience.

THE QUALITY PLACE OF BOSTON

Regarding the Kroeschell, it is the best we have ever had and satisfactory beyond our expectations. It heats up especially quick and has saved us considerably already in the price of fuel. When we are in need of another boiler we will give the Kroeschell the first consideration.

(Signed) WM. W. EDGAR CO.,
WAVERLEY, MASS.

No Masonry—No Tubes

TUBELESS BOILER

Kroeschell Bros. Co., 466 W. Erie St.
CHICAGO

When You Buy—Get a Kroeschell

3,016,286 sq. ft. of glass was equipped with Kroeschell Boilers during the year of 1916.

OHIO'S CELEBRATED CYCLAMEN SPECIALIST

After using your No. 12 Kroeschell Boiler I came to the conclusion that had I to install more boilers it would be the Kroeschell and no other. It really is a pleasure to heat, no trouble to get the desired heat in a very short time.

(Signed) CHRIST. WINTERICH,
DEFIANCE, OHIO.

about the middle of June being at their best at the end of the same month and early July after which owing to hot weather conditions stems shorten up and flowers get smaller quickly.

No one not even the amateur grower need feel that the growing of the plants is a difficult operation. Fine plants can be grown in a well-protected cold-frame in a sheltered position on the south side of a house or other structure that will break the cold winds. A 3 x 6 ft. sash will cover sufficient plants to plant a considerable length of row, and will give a wealth of bloom for exhibiting or house decoration.

Local florists could find ready sale for plants grown from January sown seed, once their customers tried them out and were delighted with the results from planting plants instead of seed in their gardens.

PROF. WILSON LECTURES IN PHILADELPHIA

On Tuesday afternoon, Jan. 20th, Mr. E. H. Wilson, assistant director of the Arnold Arboretum, Jamaica Plain, Mass., gave an illustrated lecture on the Flora and Vegetation of Formosa and Korea. Mr. Wilson in speaking of Korea, the hermit kingdom, described its trees and told of what it has given to American gardens. He said that the similarity of climate was important, for Korean plants are particularly hardy in the colder parts of New England. He said Korea was giving us new lilacs, pears, crabapples, as well as new firs, spruces and red cedars.

Formosa, the beautiful; Mr. Wilson described as the home of the camphor trees of Eastern Asia. He described its wonderful forests and forest wealth, its head-hunting savages and its stupendous sea cliffs.

Mr. Wilson spoke for nearly two hours, and in closing, he reminded the audience that no more of the plants he had shown would be imported as long as the drastic Quarantine No. 37 was in effect.

DAVID RUST, Secy.

Ways to Help Carnation Growers

Pres. Theodore A. Dorner brought out several important points in his address at the Convention of the American Carnation Society in Chicago last week. Among other things he said:

"The American Carnation Society should devise some plan so our revenue will be increased. We are running on the same plane today as we have been in the past, regardless of the high prices. I would suggest that the dues of our Society be raised to three dollars, instead of two, which would give us a little more revenue. This may cause some criticism, but we should take time and prices under consideration. As we all know it costs a great deal more now to exhibit carnations than it did four or five years ago.

"The shipping facilities in the past year have been much improved, but we are still a long way from getting what is right. The express companies have taken better care of our packages

than last year and are a little more prompt in settling claims. I think the Parcel Post department should insure parcels against freezing when marked perishable. At present they insure only against non-delivery, the responsibility for breakage being the same as non-insured parcels. I think this matter should be taken up with the S. A. F. O. H. and it might help if we would co-operate with them. For they are in a condition to handle this matter to a better advantage. I would suggest that a committee be appointed by our Society to co-operate with the S. A. F. and O. H. in this matter. A great many parcel post packages have been frozen in transit this season, for which the shippers are at a loss.

"The registration of new varieties in the past year has been much less than former years, due to the war, fuel, labor and high prices. All carnation growers know that a new variety will in time lose its vigor and vitality, either by propagation or through disease. And those must be replaced

DREER'S "Riverton Special" Plant Tubs

by other varieties which have vigor and vitality. It costs a great deal more nowadays to put a new variety on the market, and therefore, the price of seedling carnations should, and ought to bring a higher price than in former years. The seedling carnation shown at our expositions is always the most interesting exhibit in the hall. Why? Because it is human nature for us to always be on the watch to get something better, than we grow today. Carnation growing in this country in the last three or four years was at a standstill. But today we hear of those who quit growing carnations are back in the harness again. It certainly has been a most popular flower in the past twenty years. The breeders of seedling carnations have a great future before them, as most of our standard varieties have taken the backward course and must be replaced by new varieties.

"I would suggest to those who raise seedling carnations and disseminate them, that they be very careful in selecting a name for their new varieties, so that the name will never conflict with those already registered.

**At HILLCREST FARM,
Weston, Massachusetts**

Wanted from the first day of June to Labor Day, a man capable of taking charge of twenty boys from ten to seventeen years of age through their long summer vacation from school. He should be competent to teach them about soils and the growth of plants in the class room and to superintend their work in the orchard, fruit and vegetable gardens. He must have had some previous experience in the management of boys. The best of references should be sent to Post Office Box 166, Weston, Massachusetts, before a personal interview is granted.

Every Reader of "Horticulture" Needs
DR. L. H. BAILEY'S BRAND NEW
Standard Cyclopedia of Horticulture

Six large quarto volumes. More than 3,600 pages. 24 full page exquisite color plates. 96 beautiful full page halftones. More than 4,000 text engravings. 500 Collaborators. Approximately 4,000 genera, 20,000 species and 40,000 plant names.

THE New Standard Cyclopedia of Horticulture has been freshly written in the light of the most recent research and experience. It is the fullest, the newest, the most authoritative of all works of its kind and constitutes the most conscientious attempt that has ever been made to compress the whole story of our horticultural thought, learning and achievement into one set of books. It is both an Encyclopedia and a Manual.

A Few of the Many Important New Features

Key to Identification of Plants This is a device to enable one to find the name of a plant. The name thus found is quickly referred to under its alphabetical location, where full information will be found in regard to it.

Synopsis of Plant Kingdom This is one of the most important features of the new edition. It constitutes a general running account of the classes, orders, and groups of plants, with a brief sketch or characterization of 215 of the leading families comprising those that yield practically all the cultivated plants. These family descriptions give the botanical characters; the number of genera and species and the ranges; a list of the important genera; brief statements in regard to the useful plants; and diagrammatic illustrations.

Illustrations There are 24 colored plates; 96 full page halftones; and more than 4,000 engravings which serve as guides in the text.

The Glossary This is an analysis of all technical terms that are used in the work and in similar works. It comprises botanical and horticultural terms with brief definitions.

Translation and Pronunciation of Latin Names In Volume I is inserted a list of between 2,000 and 3,000 Latin words used as species—names of plants, giving the English equivalent or translation and the pronunciation.

Class Articles Special effort has been made to secure the best cultural advices for the plants requiring peculiar or particular handling. Here are some of the titles of these articles: Ants; Autumn Gardening; Bedding; Diseases; Drainage; Floral Designs; Formal Gardening; Hotbeds and Coldframes; Insects; Landscape Gardening; Lawn Planting; Orchards; Rock Gardening; Subtropical Gardening; Tools and Implements; Village Improvements; Window Boxes, etc.

General Index The final volume contains a complete index to the entire work, enabling the reader to locate volume and page of any subject he has in mind.

The complete set of six volumes, bound in decorated buckram, will be delivered to you for only \$3 down and \$3 a month for 11 months, until the full amount of \$36 has been paid. Cash price \$35.

Principles and Practice of Pruning

By M. G. KAINS

Lecturer on Horticulture, Columbia University

Few practices in the handling of plants, especially fruit bearing plants, attract so much interest as do those of pruning. The methods are so varied, the results so diverse, and the opinions of growers so apparently contradictory that this subject is always one of the most interesting, and the surest to hold attention and arouse discussion.

Particularly during the last ten or fifteen years when the principles of plant physiology have been more and more satisfactorily applied to plant production and management has interest settled in pruning. During the latter half of this time also more and more investigations and tests have been conducted by experiment stations and other workers to test out methods and principles in the interest of science and for the benefit of growers. The accumulation of such new knowledge has become very considerable especially in the last decade, but it is necessarily so scattered that very few growers have access to it, hence the demand for a book, which shall present the really important features of these investigations as well as set forth the fundamental principles based upon the laws of plant growth.

This volume is lavishly illustrated mainly by actual photographs of specimens which show good and bad practices. The author has spared neither time nor expense in gathering his photographs, each one of which tells its story.

After a few pages of introduction the author discusses Plant Physiology as related to pruning. A chapter takes up the Philosophy of Pruning, itself a very interesting subject. Then follows a classification and clear discussion of Buds, very fully illustrated from life. How Wounds Heal is an exceedingly interesting chapter, as are also those on Prevention and Repair of Mechanical Injuries, Pruning Nursery Stock, Young Trees, Mature Trees and Odd Methods of Pruning and Training, Rejuvenating Neglected Trees and Practical Tree Surgery.

Profusely illustrated. 400 pages. 5½ x 8 inches.

Cloth. Net, \$2.00.

Plant Propagation, Greenhouse and Nursery Practice

By M. G. KAINS

We have had many inquiries from time to time for a reliable and up-to-date book on plant propagation, but were always at a loss to find any publication that we could recommend. The subject has been dealt with in fragmentary manner only in books that have come to our notice. So it is well that this new work has been issued, especially as it is both comprehensive and practical, and it should meet with a ready sale among plantmen, nurserymen and gardeners. There are nineteen chapters covering in detail topics of germination and longevity of seeds, propagating by buds, layering, cuttings, grafting, etc., fruit tree stocks, scions, etc., and there are eight pages of condensed cultural instructions in tabulated form, covering annuals and perennials from seed, woody plants, evergreens, vines, bulbs and tubers, greenhouse and house plants, ferns, palms, water plants, orchids and cacti. The illustrations are numerous, comprising 213 figures and halftone plates. There are 322 pages well bound and on heavy paper, teeming with helpful information. It is a book which no cultivator can afford to do without. It is worth many times its price. Copies can be supplied from the office of HORTICULTURE at publisher's price, \$2.00.

FERNS

THE VICTORY FERN (*Nephrolepis victoria*)

We take pleasure in offering this new and valuable variety of *Nephrolepis*. It is a beautifully crested form of "Teddy, Jr." with fronds frequently subdivided on the ends, making a most unique, distinct, and desirable variety.

This fern was

AWARDED A BRONZE MEDAL

at the S. A. F. Convention at Detroit in August, 1919. The judges of the award reported as follows: "Special stress is laid on the new fern Victory, with a rapid growth and a branching at end of fronds, making it a shapely plant. It should be a commercial success, and we **RECOMMEND IT MOST HIGHLY.**"

Strong plants, 2½-inch pots.....\$3.00 per dozen, \$20.00 per 100

NATIONAL PUBLICITY CAMPAIGN

The Publicity Committee held a two-day meeting on January 21st and 22nd in Chicago, at which working plans were formulated for the 1920 Campaign, and in greater part adopted. There is to be no let-up in the activities of the Campaign, and the magazine advertising is to be as persistent as ever.

The Committee were greatly pleased at the reports they had received as to the results of the Campaign. Many florists making these reports had taken particular pains to record conversations had with new and old customers, from which it was quite evident that the Campaign was producing good business. Some of these reports referred to a noticeably great increase in the demand for flowers for anniversary gifts. The request that our slogan appear on the cards sent with such gifts was very general, and showed a disposition on the part of the public to adopt the slogan to their own use.

We most surely have a wonderful slogan, one serving two purposes. We can easily understand why publicity experts consider it to be an asset we should value at more than a million dollars. It is really worth many millions to us, and properly perpetuated it should produce business each year equal to its valuation. It would not be wrong to say it is doing it already.

And yet there are thousands of florists who, through their negligence in the support of our Campaign, do not appear to value the slogan very highly. Or is it that they are careless, or quite content to let their more generous brethren bear the expense of making the slogan a "household phrase?" We would ask these careless ones just what it would be worth to them to have "Say it with Flowers" quoted or suggested in every good family in their respective communities daily, or even a portion of these families. Our advertisements in the magazines should be doing this very thing, and to be sure that they are doing it, the slogan should appear in every magazine of consequence. It would, if the proper support were given the Publicity Committee. The Committee are limited only by the amount of the funds at their disposal. If they could have the support which now they have right and reason to expect, they could accomplish their full purpose instead of hav-

Elmer D. Smith & Co.
Adrian, Mich.

ing to content themselves with what, at best, is only a good scratch in the field of publicity.

Now is a good time to come into the Campaign. The Committee are assured by subscriptions already pledged, of being able to carry out plans within a certain scope, but without a prospect for the advance which they hope to make when the required support is available. They should be placed in a position to at least double the results already obtained, the possibility of which cannot be questioned. The benefit sought is not for the individual, nor any particular section of the trade, but is for the whole craft, the whole industry. Florists who link up with the Campaign through their local publicity, aided by the various helps furnished by our Promotion Bureau, get a full measure of the general publicity. Display the slogan sign wherever possible; use the electrotypes featuring the magazine advertisements; and help to spread the message of the slogan at every opportunity.

Above all, if you have not already subscribed to the Campaign Fund, let the Secretary have your pledge, in whatever amount you can afford, to support the Campaign during 1920.

JOHN YOUNG, Secy.

1170 Broadway, New York, N. Y.

PENN'S LANTERN SLIDES.

They Are Made Available for Any Club Interested in Advertising.

Henry Penn, of Boston, has made a more careful study of retail advertising than the majority of florists and as is generally admitted, has shown much originality in the character of the retail ads. which he has put out. Moreover, the ads. have been tested and their value shown by the results obtained.

Mr. Penn now proposes to give the benefit of his long experience to retailers in other parts of the country. For that purpose, he has had nearly two hundred lantern slides made and some of them colored. These slides reproduce the most successful of the advertisements which have gone out from the Penn store the last few years. They show up very large on the screen so that they can be carefully studied. Mr. Penn announces that these slides may be used by any organization of florists which is willing to pay the shipping charges, a very normal sum. No charge is made for the use of the slides.

It would seem as though every florist club might well set aside an Advertising Night, at which these slides may be shown and comments made by a member of the club who has had advertising experience.

THE TALK OF THE TRADE

The awarding of the Gertrude M. Hubbard gold medal to Mr. E. G. Hill for the Rose Columbia must have been a piece of work that caused the Executive Committee of the American Rose Society some serious thought. The Hubbard medal is awarded to the best rose of American origin. Now that is pretty tough when it is necessary to grant an award which covers the Rambler, all of the various types of outdoor roses as well as indoor roses. There is such a wide range that it is almost impossible to decide intelligently. It doesn't seem that any committee should be called upon to decide without having some further instructions. Why wouldn't a scale of points be valuable, meaning of course, what would be considered the most important; for instance, so many points for outdoor and so many for indoor roses. It hardly seems reasonable to believe that this medal could ever be awarded to any rose which is not suitable for outdoor purposes, regardless of how good it is.

My remarks on this matter are not intended as a criticism of the American Rose Society Executive Committee. I believe they awarded this medal to the right rose and I understand that it was practically a unanimous opinion. It is interesting to note in connection with Columbia that it heads the list at the Portland, Oregon, Rose Test Garden, with 98.66 points, and the American Rose Society has had a number of other reports from various other sections of the United States along the same line. Columbia is a strong, vigorous grower, the foliage is exceptionally good, and resists black spot and mildew. It has now been on the market long enough to prove that it does well out of doors in almost any section of the country, so I think there will be but very little criticism of this award.

L. J. Reuter reports that on his trip to Chicago he had the opportunity of visiting a few places which were particularly interesting to him; for instance, the Poehlmann ranges which are now all working. What particularly interested him at Plant A was a

wonderful lot of palms, principally Kentia Belmoreana and K. Forstereana. They have them in all sizes and one large block of many thousands of plants in made up Forstereana will be very welcome indeed to the storeman next fall. They stand now between 3½ and 4 feet, and the Poehlmanns are holding these to grow into larger sizes for the coming season.

It seems to me that America is going to handle the palm situation in fine shape, as not only the Poehlmanns but a large number of other places had large stocks coming along, and I believe we will be able to get along without the foreign imports much better than we thought.

Mr. Reuter also reports that the Poehlmanns will grow heavily of the Rose Premier the coming season, approximately one hundred thousand. They think very highly of it, as is evidenced by this planting, also will go heavily into Columbia.

At the E. G. Hill Company and Joseph H. Hill Co. ranges in Richmond, Ind., everything was in the pink of condition, particularly Premier and Butterfly. Mr. Reuter thinks it would be hard for any grower to do Premier better than at the Joseph Hill place. There are a number of seedlings on trial which look very promising, and

ROSE COLUMBIA

it would seem now that Mr. E. G. Hill is going to continue his good work by giving us more new roses.

At the Fred H. Lemon greenhouses, a fine lot of white malacoides was found, and Mr. Reuter thinks this is destined to become a standard commercial pot plant. It is double in form, has larger flowers than any of the malacoides, unless possibly he would except Townsendii. Mr. Lemon also has a very fine geranium called Alice Lemon, which he says is particularly valuable for pot plant purposes. It is single, apple blossom shade, with a dark eye, and very attractive.

It seems to me that the New York florists are to be congratulated, at least those of the 28th street fellows who are moving to the old Greenhut building, the ground floor of which has been vacant for such a long time, excepting during the time when the U. S. Government had it in use. There seems to be decided advantages coming to these commission men in making this move, and it certainly will be an advantage to the buyers. It took a lot of courage to undertake and carry this out, and it is very much to the credit of these men that they had the back bone and the good judgment to go through with it.

No new move made by any of the florists of the country strikes me as being as important as the formation of the Growers' Association. There is all the chance in the world for great good to come to the growers through this Association, and when our past president, J. Fred Ammann, brought this before the convention at Chicago, there was no hesitation whatever shown by any of those present to take hold of his plan and go through it with a rush. As has been stated before in HORTICULTURE, the result of this meeting was the formation of a temporary association with the election of F. C. W. Brown of Cleveland as president, J. Fred Ammann of Edwardsville, Ill., secretary, and C. E. Gullett, Lincoln, Ill., Wallace R. Pierson, Cromwell, Ct., and Robert C. Kerr, Houston, Tex., as directors. The next important move will come at the S. A. F. annual con-

CAROLINA HEMLOCK

(TSUGA CAROLINIANA)

THE MOST BEAUTIFUL AND RARE AMERICAN EVERGREEN

Specimens may be seen at Arnold Arboretum, where one may compare it with hundreds of other varieties of Evergreens.

Hardier and more adaptable to trying city conditions than the common or Canadian Hemlock.

Dense, dark foliage and sweeping semi-pendulous branches with pyramidal form combine to give a charm not found in any other known Evergreen.

SPECIAL: A limited number of Grand specimens, 16 to 20 feet high for immediate effect at my Highlands Nursery (3,700 ft. elevation in the Carolina Mountains). Prices on request.

A fine stock of smaller specimens from 1 foot up at my Boxford Nursery. Catalogs.

vention in Cleveland next August, when the organization will be made permanent.

RETAILERS' NIGHT.

Important Meeting of the Florists' Association of Boston.

Different branches of the trade are having their innings at the monthly meetings of the Florists' Association of Boston. The meeting on Tuesday night of this week was given over to the retailers and they made the most of it. President Henry Penn was in the chair but after the opening put Chairman Letson in charge. William Penn, Elijah Gorney and several others spoke.

Mr. Gorney had carefully prepared a paper which set forth the position of the retailers and in a large measure summed up the remarks of the other speakers. This paper was as follows:

"I fully agree with the growers that they should get better returns for their hard work and for their investment and energies. There is no reason in the world why they should not get better returns. I also agree with Mr. Elliott that artificial flowers should be done away with; they are a detriment to our business. We should in every way encourage the use of fresh flowers and the growers should help us by not putting the screws on too tight during the holidays.

"I don't believe there is a retailer in this room who objects to paying the market price for flowers. We naturally try to buy as cheaply as possible and the growers, on the other hand, try to get as much as possible—that is what creates a fair market price. None of us begrudges the grower what he gets.

"I would like to know where the impression was created that the retailers were to boycott flowers during Christmas. I know of no such move and it was a false impression created by some one who wanted to cause trouble. If the retailers proposed boy-

cotting they would be injuring their own means of a livelihood, as our business is to sell flowers and not boycott them.

"As a matter of fact we met and discussed selling in general. During our informal talks the suggestion was made that we ought to push plants instead of flowers. There were several good reasons for that. In the first place, our plants were all bought quite reasonable and we could sell them at a reasonable profit. On the other hand, there was no way of telling what the market price of flowers would be and we could not give our customers any definite idea about this.

"This is the great drawback to the cut flower business, but it can not be helped as the old law of supply and demand regulates the price of cut flowers. The retailer pushes plants at first but when the rush is over we find that we have sold more flowers than ever before. I have made that a practice ever since I have been in business and if that is what you call boycotting, then well and good; but I believe that the plant business is as much a part of our business as the cut flower trade.

"On the strength of that I understand that you growers intended to open a market to the public. Of course, if that is done and done often enough it will put the retailer out of business. Would that be of any benefit to the grower and commission man? It certainly would be detrimental to everybody. But the markets are open to the public right now and on a large scale. Anybody can come in any of the doors of the market and buy anything in the market at about the same price we pay. For every bank opened, every ship launched, every prominent funeral, large amounts of flowers are made up in the markets. Department store collections in the stores also go to the markets.

"Two weeks ago one of our retail-

ers lost a \$150.00 job because he couldn't compete with the prices given by a salesman in the market. Last week I was asked the price of one hundred red carnations for a banquet. As the market was fifteen cents, I quoted \$20.00. He said to me, 'I am sorry Gorney, but I can get them from one of the men in the market for \$16.00.'

"Some of our customers have charge accounts with commission men in the market. I sold one dozen poinsettias to a customer for \$9.00 and put them aside for him. The day before Christmas he told me he had bought them in the market for \$4.00. I don't blame him for buying cheaper but the fault is with us. Do you call that fair to the retailer?

"Here we are prepared under heavy expenses for retailing and depend on retailing only for our livelihood. The markets are situated in the heart of the city and the salesmen who sell have no expenses as far as retailing is concerned. In what other line of business can the public go to buy anything at wholesale? I know of none. Retailing in the market is of no benefit to the grower; it is only side money to the salesman, that does not belong to him but does belong to us. It is a very serious matter and must be stopped. Every retailer is dissatisfied with this condition and I believe if the market directors take action to prevent this that it will be a great comfort to all concerned.

DESTROYED BY HAIL

Last Summer a florist who had imagined he was outside of the hail section lost upwards of 50,000 square feet of glass by hail with no insurance to recompense him.

He is now a member of the Florists' Hail Association of America.

Profit by experience and join the Association now. Address

JOHN G. ESLER, Secretary

Saddle River

New Jersey

DAVID G. GRILLBORTZER.

The New Vice-President of the American Carnation Society.

David G. Grillbortzer, the new vice-president of the American Carnation Society, head of the Washington Floral Company, of Washington, D. C., is soon to celebrate his twenty-fifth anniversary as a florist, and it seems peculiarly fitting that the industry with which he has been identified for that number of years should at this time honor him with the second highest office at its command.

Mr. Grillbortzer when hardly sixteen years of age entered the employ of J. Louis Loose, then a prominent grower of Alexandria, his native place. After serving a five years' apprenticeship in the business he joined his brother, H. Fred Grillbortzer, in a small undertaking under the firm name of Grillbortzer Bros. They had four small houses, 100 feet by 30 feet. Today he controls more than one hundred times that amount of glass.

Three years later the brother died and the business continued under the name of David G. Grillbortzer. Another interesting contrast is that when he first started out for himself, he had a capital of \$300. Today, besides this large quantity of glass, he controls the business of the Washington Floral Company and is handling a large volume of wholesale and retail trade, marketing his own production, and enjoying a growing telegraph delivery business.

When, in June, 1918, he had an opportunity to buy out the business of J. Louis Loose, under whom he had learned the business, he had approximately 150,000 feet of glass. His purchase about doubled his holdings and added the store of the Washington Floral Company, on Fourteenth street.

The greenhouses are located in Alexandria, Va., about five miles from the store. While he still specializes to a considerable extent on carnations, having as good a stock of these as can be found in this section of the country, he grows a miscellaneous stock of flowers on his large range. For instance, he has 3,000 orchid plants, and he is practically the only grower of cattleyas in this vicinity. In the houses are more than 40,000 rose plants, and of other stocks it is said "if it is obtainable at all, Grillbortzer will have it."

He has built up his business by honest dealing. His ability and integrity have been recognized before—some years ago he was made president of the Florists' Club of Washington, D. C., and he has always been an active participant in the affairs of that

organization, and he has taken great interest in the campaigns of the S. A. F. and O. H. He is a member of the Alexandria Chamber of Commerce and of the Retail Merchants' Association.

Some years ago Mr. Grillbortzer was granted membership in Alexandria-Washington lodge of Masons, of which George Washington was the first mas-

ter and in the lodge room in Alexandria the gavel he used is still wielded to make noisy members subside. He also belongs to Old Dominion Commandery, Scottish Rite, and Acme Temple (Richmond) Order of the Mystic Shrine.

DAVID G. GRILLBORTZER

WE NOW INTRODUCE

Gladiolus "White America"

A seedling of "America," having same habit of growth, form of flower and substance. Color—buds flesh-white opening clear white, with a slight mark of blue in throat.

THE MOST IMPORTANT NEW VARIETY SINCE "AMERICA."

THE MARKET.

Owing to a somewhat increased supply and a distinct falling off in demand, there has been a slight sagging of the market the past week. The outlook is that this tendency will continue for some time. Carnations have been sold for six cents and Laddie has been brought fifteen, but ten cents has been about the average. Short stemmed roses have brought from eight to twelve cents. Long stemmed roses are hard to get at any price. Callas, although more plentiful, are still selling well. They bring from \$3 to \$4 in the Boston market. In New York they are worth \$2 more. Sweet peas and violets are much more plentiful and the demand has been slack. The former have been bringing 2 and 3c., while violets have gone rather slowly at one cent. A miscellaneous lot of other flowers sold for whatever they could bring.

The city of Boston is divided into districts, and each district is numbered. If you will observe the number allotted to HORTICULTURE, it will facilitate the delivery of mail to this office.

The one thing which seems to engage the attention of florists, both retailers and growers throughout the country at the present time is the scarcity of stock and the consequent high prices.

There is no doubt about the fact that flowers are in less quantity than ever before in recent history, but it is worth remembering that almost always there is an inevitable scarcity between the middle of January and the middle of February. Anybody in the trade looking back over the last dozen years or so will remember that there has always been this period of short supply.

It must be admitted, however, that the shortage is very much greater this year than is normally the case. Just why is this? It is difficult to get an agreement as to the answer. The demand has been so heavy as to amaze florists themselves, considering the prices it has been necessary to charge for the goods. To what extent this demand has been fostered and created by the advertising campaign now being carried on is a question which no one can answer, because in every line of business there has been buying far beyond the average. At the same time, it must be conceded that this advertising campaign has had a remarkable effect in sustaining the business and in inducing new people to start buying flowers. It is a rather curious situation altogether, because the advertising campaign is bringing its results just at a time when the demand is especially hard to meet. Thus we have several complications.

Without much doubt, the present situation will last for a considerable time, yet it is not difficult to explain and there is no reason to believe that there will not eventually be a satisfactory readjustment. Flowers are scarce as a result of war-time conditions. Everybody

knows that scores of houses were shut down and production was very limited for a year or two. It is not yet back to where it was before the war. Even when it gets back to that place, however, it will not be normal as conditions are now, because the demand is far greater than it was in pre-war times. This means that what was a normal condition then is not a normal condition now.

That there is every reason to expect business to continue at a living profit is evidenced by the fact that a large number of growers are planning to increase their ranges so as to make a much larger production possible. If this movement is carried forward upon as large a scale as it seem likely to be, production in the course of two or three years will come pretty well toward meeting the demand. You can see from this, therefore, that the present situation is only a temporary one, but how about prices? No one can predict safely as to the future. If there is a general slump in business as many people believe there will be, wages all along the line will come down and this may cause less buying, for it must be admitted that buyers today are largely wage earners. At the same time, however, the cost of living may decrease proportionately so that everybody will have about as much money to spend for luxuries. As it is now, the florist is certainly getting no more than his share of profits and is, not faring nearly as well as people in many other lines of business. It costs him at least 100 per cent more for labor than it did before the war and 200 per cent more for coal; all his other expenses have gone up in a similar way. If there comes a slump, the florist will be the first to suffer. It is always a case of hard times when people stop buying flowers freely. With this handicap it would seem as though the florist would be entitled to extra large profits when business is brisk, yet that is not the case.

The best anyone can do under the circumstances is to match his guess concerning the future with that of his neighbor, but it is a self-evident fact that the scarcity of flowers as exists now is merely a passing thing, and all indications point to a rapid recovery of the business and restoration to normal conditions. Then the flower famine will be a thing of the past.

Discretion vs. common sense

With the Federal Horticultural Board at Washington setting the pace, it is not surprising that the different state boards should develop a sharp and sudden interest in quarantine measures of one kind and another. But what will the end be? Disaster, without question, if the present state of mild hysteria continues. States will be putting up the bars against each other all over the country, while inspectors and other salaried officials will multiply until the expense of their maintenance becomes a heavy burden. It would be the natural thing for Ohio and Indiana to follow the lead of Illinois in shutting out dahlias, gladioli and geraniums. Pennsylvania is discussing a quarantine against New Jersey to keep the Japanese beetle from crossing the Delaware and so it goes.

Yet right in the midst of all this comes an announcement from Washington which turns the whole performance into an Opera Bouffe. The European corn borer, we are told, is a much less harmful pest than had been supposed. Being one-brooded in New York and the West, it is not to be considered any great menace. And even in New England, we are further informed, the damage has been much less than the alarmists had predicted. In Illinois fearful discretion seems to have taken the place of reasonable common sense.

**George Watson's
Corner**

"You in your small corner and me
in mine."

The passing of Joseph C. Trainer, proprietor of Trainer's Hotel, leaves a void in the hearts of many in the horticultural world. What Dooners' is to the seed trade as a Philadelphia headquarters, Trainers' was to the florists. The hostelry was across the street from Horticultural Hall and its cozy booths were the mecca for many happy and joyful meetings during flower shows, club and society events, as well as in sporting affairs of the innocent and joyful bowling days of the Florists' Club. Every visitor from the far cities had to be taken to Trainers' to hear his Irish wit, and get the true flavor of Philadelphia hospitality at its best and freest. No matter if one stayed at the Bellevue or the Walton—the visit was not complete without a call at Trainers'—if not so skyscraping that house had an individuality all its own. When a boy—running around loose where the ships came in—Joe got the maritime jinx inside of him and ran away to sea. In after life the salt sea anecdotes and breezy colloquialisms which interspersed his conversation were a delight to hear. He was a member of the Florists' Club and the Horticultural Society and took a keen interest in all their doings.

Our old Philadelphia friend (late of Craig's and other places around these parts) Robert Lockerbie, who has been managing the Belk greenhouses at Charlotte, N. C., for some years past, writes us that he has taken a corporate interest in a similar concern at Greenville, S. C. and will take up his new duties there Feb. 15th. We are told that he has been very successful with the Charlotte place and our best wishes go with him in his new venture. Robert is of the heather—if there be any clumps of it left around Edinburgh Castle—and he seems to get along well with the Carolinians, many of whom claim to be descended from the Ulster-Scots and Highland Scots of Flora Macdonald's day.

There seems very little let up on the scarcity of flowers in the market here. Not enough to go around in any line. The situation all through the season has been much more stringent than

last year. Cattleya Trianae is one of the few good things in reasonable supply. Freesias show up well and in fair quantity. The same may be said of Calendula which is really very fine and a surprise both in color and size to the old time strains. A rare once-a-year visitor has made its appearance—the golden Acacia—which is very welcome for the short time it lasts and brings readily five dollars per bunch of about a dozen sprays.

The greenhouse builders seem to have been fairly busy in the neighborhood for some time past. The King Construction Co., have the contract for a good sized addition to the David Anderson range at Garrettford. Hitchings & Co., have the contract for the Alvan Harvey & Sons improvement at Brandywine Summit, and Lord & Burnham are busy with an eighty-thousand area at St. Leonardo for a new company of which Elwood Heacock is the president. Of course, these instances are only mentioned at random, and only cover an edge of the situation; but they go to show that there is a whole lot going on notwithstanding the high cost of labor and materials.

The Robert Buist Company have remodeled the second floor of their store at Front and Market streets, making same more up to date for taking care of the mail order end of their business. The improvements represent an investment of over five thousand dollars. This house is very busy at present with their Southern trade. They do a very large business, both wholesale and retail in the Southern states.

AMMANN COMING TO BOSTON.
Will Discuss the Proposed National
Growers' Association.

Arrangements have been made whereby J. F. Ammann, former president of the S. A. F., will give his whole time for the next year to the proposed National Growers' Association. Mr. Ammann, who has been elected secretary of the temporary organization, will travel from coast to coast for the purpose of arousing interest in the new organization. It is expected that he will reach Boston about the middle of March, and already preparations are being made for a big meeting at which he will outline the plans which have been formed. It is understood that the method of organization followed by the coal miners will be taken as a kind of working model. So-called "Locals" will be organized in each section, and these locals will have their representatives in the national organization. Several New England growers have already expressed their approval of the project.

FACING RUIN

Plight of Holland Growers Because
of American Quarantine

The following letter from the Royal
Tottenham nurseries of Dedemsvaart,
Holland, gives a pathetic sidelight on
the effect of the American plant
quarantine:

"We hope that your Nurserymen's
and Florists' organizations will take
strong action with Congress in order
to get modifications of the present
quarantine. We fear, however, that
unless these modifications will soon
come it will be too late to save the
position of hundreds of hard work-
ing nurserymen, who are now strug-
gling against ruin. They are fighting
the last fight, and the end will be that
millions of plants, which are badly
wanted in the United States, will
have to be burned and the owners be
totally ruined and come to despair.

"The cost of production of plants
here are at least double what they
were before the war, and the high
value of the Dutch Gilder makes it im-
possible for lots of countries, which
were the best customers in pre-war
times, to buy anything. We went
around Boskoop, Ghent, and other
plant exporting centers and every-
where we found the same sad condi-
tions. It is a heavy moral responsi-
bility which your Federal Horticul-
tural Board has lightly taken up, and
the world will lose much if it will be
impossible henceforth to get lots of
plants, which add so much to make
the lives of people bright.

"According to our opinion your
F. H. Board ought also to prevent any
people entering the United States in
order to prevent diseases among men
to spread. We fervently hope that
the step your committees will take
will meet with the success it deserves
and that common sense will again
rule with your officials, who seem to
at present have the international hor-
ticultural trade by the throat."

The Royal Tottenham Nurseries are
probably the world's largest growers
of herbaceous perennials, which are
shipped to all countries. They have
introduced many of the varieties now
produced here.

GENERAL NEWS NOTES.
At a recent meeting of the Lenox,
Mass., Horticultural Society it was
voted to hold its show this year. This
will be quite welcome news to flower,
fruit and vegetable lovers, as these
features of Lenox life and activities
were patriotically omitted during the
recent world war, not alone as a coal
saving measure, but in order to release
manpower for work in munition plants,
in the growing of foodstuffs and other
necessary activities, as well as to fur-
nish fighters at the front. It speaks
for the cosmopolitan makeup of the
men engaged in horticulture locally
that Lenox had representatives from
membership in the local horticultural
society in most of the allied armies.

A floriculture club has been formed
at the Agriculture College, Amherst,
Mass., with these officers: President,
Peter J. Cascio, '21, of Willimantic,
Conn.; vice-president, Robert T. Homes
of Agawam; secretary and treasurer,
R. W. Woodbury, '20, of Newton.

An indispensable book for every nur-
seryman. Complete directions for prop-
agating every kind of nursery stock,
with many illustrations. Copies sent
from the office of HORTICULTURE
upon receipt of price, \$2.50.

GARDENERS' & FLORISTS' CLUB OF BOSTON.

Owing to the severe weather, and
shortage and high price of flowers, the
prize exhibition of the Club scheduled
to be held on Feb. 10 has been can-
celled. The Committee regrets to an-
nounce this, but the extraordinary
conditions prevailing rendered this
unavoidable. The annual Carnation
Night will be held in lieu of the exhi-
bition and all growers of carnations
are invited to exhibit and attend this
meeting. Other exhibits than Carna-
tions will also be welcomed and may
be sent direct to Horticultural Hall.

There will be a demonstration of oil
heating for greenhouses by a prom-
inent Eastern oil heating firm.

W. N. CRAIG, Secy.

THE ROSE MIDGE.

How It Works and How to Control It.

Mr. Wm. A. Ross of the Ontario Experiment Station has issued a warning to Canadian florists on the subject of the rose midge, which he claims was introduced from the United States about 1914. He says:

The experience of florists in Ontario and in the United States indicates that this insect, when present, is the most destructive pest with which the rose grower has to contend. Last year in one Ontario greenhouse its depredations caused a loss of \$12,000, and in another \$6,000 to \$7,000.

Nature of Injury.

When abundant, the larvae of the midge—very small whitish maggots—may be found feeding on any succulent part of the rose bush, as, for instance, at the base of the flower buds, within the buds, on the upper side of tender leaves and on leaf petioles. However, the favorite and usual point of attack is on the young shoot in the axil of a leaf petiole. Infested shoots grow crooked and, as a general rule, wither and die. Affected flower buds, when not killed outright, may be so disfigured as to be unsaleable.

Fortunately for the florist, the midge remains quiescent in the soil during the winter, when the most profitable crops are grown. Perpetuals, with strong terminal shoots like those of Killarney, are practically immune. All the Polyantha, Bourbons, Hybrid China, Noisette and Wichuraiana roses appear to be immune. In greenhouses Ophelia and Milady roses are by far the most susceptible varieties. Russell, Stanley, Richmond, Shawyer, Hoosier Beauty, Columbia, Sunburst, are attacked to some extent, and here again Killarney appears to be partly immune.

Life History.

The adult insect is a fragile, two-winged fly, less than one-sixteenth of an inch in length. The female deposits her eggs between the folded leaves of the leaf buds, to some extent in the axils of tender leaves and between the sepals and petals of the blossom buds. Under greenhouse conditions the eggs hatch in about two days. The maggots, as previously stated, feed on the tender tissues of shoots and buds, and become mature in from five to seven days. They then drop to the soil, change to the pupal stage, and

emerge as adult flies in about six days.

The midge is most abundant and destructive during summer. With the coming of autumn it declines in numbers, and by November wholly disappears from the rose plant. It remains dormant in the soil throughout the cold winter months, and does not reappear again until early March.

Control.

The only method of controlling this insect, which has been tested on a commercial scale, and found effective, is: Nicotine fumigation and tobacco dust treatment. Break up the lumps and level the soil to as great an extent as possible. Cover the beds with a coat of tobacco dust, one-quarter-inch to one-half inch thick. Spray the earth walks with kerosene or kerosene emulsion. Fumigate nightly with tobacco smoke until all adult midges disappear.

Kerosene (coal oil), 2 gallons.

Rain water, 1 gallon.

Soap, ½ lb.

Slice the soap, dissolve it in boiling water; pour the kerosene into the hot soap solution and churn the whole vigorously with a syringe or pump

for about five minutes until a thick creamy emulsion is produced. For use, dilute with nine parts of water.

Prevention.

In order to prevent the further spread of this insect, and this at present is our chief object, florists should be guided by the following recommendations:

(1) Whenever possible, growers should propagate their own roses.

(2) New stock should be obtained from non-infested greenhouses.

(3) Rose plants and scions purchased through commission houses or from places not known to be free of midge, should be imported before the end of February. This recommendation is made because such stock, provided it has been planted in November or December, will not have been exposed to infection.

(4) Greenhouse grown roses, brought in later than February, should be carefully examined for Rose Midge injury, and any infested plants should be destroyed. In addition to this, the soil should be washed off the roots of the plant and should then be thrown into the furnace or scalded with hot water or steam.

RAMBLING OBSERVATIONS OF A ROVING GARDENER

I have been interested to note that Maurice Fuld is gradually getting away from his announced determination not to use any illustrations in his catalogues. The spring catalogue which has just come to hand contains a number of pictures, including some of the newer flowers which Mr. Fuld is putting out. To be sure, Mr. Fuld has shown great restraint in this respect, as the number of illustrations is very limited. Yet it is evident that even he is beginning to realize that it is almost impossible to satisfy customers with bare descriptions of flowering plants, or for that matter, of vegetables and garden accessories. They demand an opportunity to see for themselves what the advertised article looks like. Mr. Fuld's catalogue, however, is just as distinctive as in past years, and is obviously growing in size. A number of shrubs have been added to the list of perennial and annual plants. The bits of poetry and selections from garden

writers add to the effectiveness of the catalogue.

It is a matter for congratulation that so many of the nurserymen are beginning to extol the advantages of the hemlocks. The common northern hemlock, *Tsuga canadensis*, is one of the finest evergreens for landscape work in New England, also it makes a splendid hedge. I think that I have already spoken of the hedge of this character which is to be found on the Bayard Thayer estate at Lancaster, and which is a marvel to all who see it.

A close rival of *Tsuga canadensis* is *Tsuga caroliniana*, which after going through several of the severest winters of recent years has proved itself absolutely hardy in this part of the country. Moreover, the Carolina hemlock is an exceedingly graceful ornamental tree, although Professor Sargent, of the Arnold Arboretum, calls it somewhat less handsome than *Tsuga heterophylla*. For more than thirty years the Carolina hemlock has been

growing in the Arnold Arboretum, and now some of the more progressive nurserymen are giving it the attention which it deserves. Undoubtedly both the northern hemlock and the Carolina hemlock deserve a place among the six most desirable conifers for planting in southern New England.

The others which should have a place in this list are *Pinus strobus*, *Pinus resinosa*, *Abies concolor*, *Abies homolepis* or *brachyphylla*. All are native American trees except the last named, which is a Japanese fir of extraordinary beauty. It will be long before this tree is widely disseminated, but there is no reason why the Carolina hemlock should not become a familiar subject on estates throughout this part of the country, and for that matter, in many other sections, for it is a tree which will flourish over a large area.

CARNATION NIGHT IN NEW YORK.

The next meeting of the New York Florists' Club will be held, February 9. It will be carnation night. The Exhibition Committee wishes all carnation growers to send exhibits of either new or standard varieties. Exhibits to be sent prepaid to the Exhibition Committee, 127 West 28th street, New York City.

UNJUST DISCRIMINATION.

The Way B. Hammond Tracy Describes the Illinois Quarantine.

Wenham, Mass., Feb. 2, 1920.

There has been much discussion about the European Corn Borer but the Federal Horticultural Board has had it under observation for a number of years and have decided that it is not so very destructive. The Weekly News Letter (copies of which may be had on application to Washington), gave a very good account of how little destruction has been caused. It is easily controlled, and is seldom found on well kept farms. The destruction has been greatly exaggerated, and much of the discussion and the resulting trouble has been brought about by misplaced political efforts.

On October 13, 1919 Florida put into effect the following Quarantine, Rule 43:—

"In order to prevent the introduction into the State of Florida, of the European Corn Borer; a destructive insect enemy of corn and other crops, known to have become established in the State of New York and in New England, the shipment, transportation or carrying into the state of Florida, from the states of Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut and New York and from all other states or countries in which the European Corn Borer may be found to occur of any and all of the following materials is hereby prohibited.

"All broom corn, corn, corn fodder, stover, corn stalks and corn cobs; except shelled dry kernels of corn free from pieces of cobs and stems, corn meal grits and flakes; and the cooked or preserved products of corn.

"All hay, straw, grass and the dried stems, leaves or stalks of grasses and all succulent plants commonly known as weeds (regardless of whether used as feed, bedding or packing materials).

"All manure, and litter of all kinds, except guano and commercial fertilizers.

"All aster, chrysanthemum, gladiolus, golden rod, dahlia and sunflower plants, and all parts thereof, including cut flowers of these species and varieties, except seed and unsprouted bulbs free from soil.

"All succulent plants, including asparagus, bean, carrot, cabbage, celery, grape, lettuce, pepper, potato, rhubarb, Swiss chard, spinach, tansy, tomato, and cucumber plants, and all parts thereof; except potato tubers, seeds as such, and canned, cooked or

preserved vegetables or fruit products."

It will be clearly noted how comprehensive is this embargo, restricting the importation of every thing which might in any way carry the insect, and the noticeable exception of dahlia and gladiolus bulbs and potato tubers, in which it is well known the borer cannot be carried and in which it has never been found.

On January 20, 1920, the Governor of Illinois put into effect a quarantine prohibiting "the shipment of corn, broomcorn, celery, dahlias, chrysanthemums, gladioli, and geraniums growing in the said states of Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, and New York, except seed corn in packages not to exceed one pound and seed corn in bulk, provided it has been shelled and double screened and it is addressed to the Chief Inspector."

Inasmuch as Illinois in an effort to protect the state from the Corn Borer, has put an embargo upon things which do not carry the insect, allowing the importation of any number of plants in which it has always been found, it

looks on the face of it, like a very pointed discrimination against the bulb growers in the Eastern States, brought about through efficient lobbying.

I have given much time and thought to the matter of Corn Borer, since it was brought into prominence through threatened legislation a year ago, have been in close touch with Washington and State Inspectors, and am very free to state that the Illinois state embargo is a very narrow and unjust one, in its action against dahlia and gladiolus growers, since it is well known that the largest growers in the United States are located in the Eastern states.

B. HAMMOND TRACY.

THE AMERICAN IRIS SOCIETY

At a meeting on January 29th at the New York Botanical Garden an enthusiastic assembly of iris growers, both amateur and commercial, formed an organization for the culture and improvement of the iris. Classification, standard form for description and rules for judging are to be immediately considered; a check list embracing over a thousand varieties will be used as a basis for the fine collection to be started at the New York Botanical Garden, this spring. Here the question of nomenclature will receive the chief attention and in other plantings in other sections of the country there will be collected comparative data on adaption to soil and climate and show plantings will be made of the finest varieties.

With hearty cooperation, we can help to increase your business, advise you in the treatment of pests, and aid in many other ways. You may become an active member at \$3.00 a year. Wake up. The iris are coming into their own.

The following officers were elected to serve until the regular annual meeting in the spring: President, John C. Wister of Philadelphia; vice-president, Wm. A. Peterson of Chicago; treasurer, Frank H. Presby of Montclair, N. J.; secretary, R. S. Sturtevant Wellesley Farms, Mass., and as regional vice-president, B. Y. Morrison, Washington, D. C., Mrs. Samuel H. Taft of Cincinnati, T. A. Kenning of Minneapolis Sidney B. Mitchel of California, Floyd Brallior of Nashville, and Dr. F. E. Bennett of Ontario. The directors are Edwin C. Shaw, James Boyd, B. H. Farr, Harry A. Norton, M. J. Hendrickson and Dr. H. A. Gleason.

THE BOILER OF Unequalled Fuel Economy

Kroeschell Boilers, the best by test since 1879. Forty years' experience.

THE QUALITY PLACE OF BOSTON

Regarding the Kroeschell, it is the best we have ever had and satisfactory beyond our expectations. It heats up especially quick and has saved us considerably already in the price of fuel. When we are in need of another boiler we will give the Kroeschell the first consideration.

(Signed) WM. W. EDGAR CO.,
WAVERLEY, MASS.

No Masonry—No Tubes

TUBELESS BOILER

Kroeschell Bros. Co., 406 W. Erie St.
CHICAGO

When You Buy—Get a Kroeschell

3,016,386 sq. ft. of glass was equipped with Kroeschell Boilers during the year of 1916.

OHIO'S CELEBRATED CYCLAMEN SPECIALIST

After using your No. 12 Kroeschell Boiler I came to the conclusion that had I to install more boilers it would be the Kroeschell and no other. It really is a pleasure to heat, no trouble to get the desired heat in a very short time.

(Signed) CHRIST. WINTERICH,
DEFIANCE, OHIO

Little Talks on Advertising

It is interesting to note the different ways in which florists take advantage of the "Say it with flowers" slogan. Some of them use the slogan in a more or less perfunctory way, as though they felt that it was their duty to insert it in each advertisement, but didn't expect to accomplish much by doing so. Others give it a more prominent position, but subordinate it to the rest of the advertising. Here and there, however, a florist comes out with an advertisement which features "Say

mentary lines, and then the name in large type.

It occasionally happens, too, that a florist makes a display feature of his telegraph service, and it is conceivable that one man in any city might build up a large trade of this kind by proper advertising methods. Apparently the owner of Campbell's Flower Shop, in Lawrence, Mass., holds that opinion, for he has put out an advertisement dealing wholly with telegraph delivery. At the top of the page he has silhouetted pictures showing the various hands through which the order passes,

with us and we will carry out your orders just as carefully if you 'phone them in as though you had called in person.

There was a time when many florists hesitated to develop a large telegraph trade because of the difficulty found in connecting, especially when the receiving florist was in a distant state. Under the rules of the Florists' Telegraph Delivery Association, unpleasant features of this kind are being rapidly done away with. The shipper feels reasonably certain of his check in due time, and accordingly is encouraged to seek for all the telegraph business he can get.

I have said something in the past about the advantages of taking up a single item at a time in one advertisement. Hoffman, the Florist, of Pawtucket, R. I., has adopted this plan, evidently, for in recent copy embellished by a delicately drawn carnation picture, carnations are given sole attention. The wording of the advertisement is worth attention. The display lines are:

"Fragrance of Our Carnations"

The rest of the message in smaller type reads as follows:

"The delicate fragrance of our carnations carries cheer and brightness into the sick room, represents a token of affection to a mother or sweetheart, glorifies the atmosphere of your home. Surely, one of these prime purposes fits your needs. Let us deliver our long-stemmed carnations to you in a crush-proof box."

In looking through "The Blue Flower" gotten out by Henry Penn, I find two or three lines which might contain a hint for an advertiser who was preparing his own copy. One of them is particularly good. It reads:

"When words fail—say it with flowers."

The ending of another sentence might also be adapted for retail advertising. It runs this way:

"One lovely red rose can help more in a time of trouble than many protestations of affection or desires to help."

Carnations, Roses, Chrysanthemums, Violets, Sweet Peas,

The Best "Say It With Flowers" Adv. We Have Seen

it with flowers" in a prominent way. In several instances which the writer has seen of late the national slogan has been almost the only copy used. In the advertisement which is shown on this page the arrangement is one of the best which has come to the writer's notice at any time. If there is any merit at all in this slogan it certainly must be manifested in advertising of this nature and after all, there is something about "Say it with flowers" which seems almost compelling in its invitation to the reader to visit the nearest florist's establishment.

Another florist who is featuring "Say it with flowers" is Hopkins of Brattleboro, Vt. In his advertisement, which is two columns wide and about as deep, "Say it with flowers" takes half the space. Underneath are a few supple-

and the reading matter is put up as follows:

THIS IS HOW
WE SEND FLOWERS
ANYWHERE
BY WIRE

- 1st—You place your order with us.
- 2d—We send order by telegraph boy.
- 3d—The order is telegraphed.
- 4th—The telegram goes on its way.
- 5th—The telegram reaches our co-operating florist who
- 6th—Delivers the flowers.

And it makes no difference where you want the flowers delivered. Whether it is any part of the United States or Canada, they are delivered the same day, if necessary. They are delivered almost as quickly as if they were actually sent over the telegraph wires. Your telephone connects you

Geo. H. Frazier, Mgr.**ORCHIDS.**

That which you have which is beautiful bring forth for the joy of the people, as in the Saturday Evening Transcript for January twenty-fourth I read Mr. George S. Sargent's description of Mr. Burrage's orchids and thought of how soon we were all to have the pleasure of seeing them growing as if in their natural habitat in Horticultural Hall. I felt as if I were to have the pleasure of glowing color which one experiences in the old cathedrals of Toledo Chartres and Sainte Chapelle in Paris. There the radiance comes from the wonderful old glass. In March in Horticultural Hall it will come to us in flowers. There has been a little criticism of the money the trustees of the Horticultural Society are to spend in prizes for this one exhibition.

The orchid has been spoken of as the rich man's flower. Perhaps in America it is. But let our imaginations go forth in adventure.

The late war has cost us to a terrible extent in the loss of life and property. What has it brought us? A greater feeling of democracy so that the rich man of the world is happy when he is sharing his pleasure with the people. It has also brought us a sense of internationalism that the world had never known before.

In America the orchid may be the rich man's flower but let our minds go forth to the jungle. Let us take up the white man's burden and give our brown man of the jungle work which he will go forth willingly to do. We do not say to him "Only go forth and kill the lion and the tiger, we want the beautiful wrapping of their skins." We say, "Growing among you are beautiful flowers; if you will get their roots and blossoms for us we will reward you well"

Last summer Dr. Wilfrid Grenfell gave us a most interesting talk about his work among the people of Labrador, of what he and his friends been doing for them. Beside me sat a lady knitting stockings to keep the feet of these people warm. In the course of his talk Dr. Grenfell spoke of the great variety of berries that grow in Labrador. It seemed to me that here was a little way of showing the people there what they could do for us and so of heightening their feeling of self respect, that they too could go forth into the world adventuring.

Because we want to grow in Middlesex County, Massachusetts, the best variety of vegetables, and will send all over the world for their seed, is that any reason why we should not enjoy the beauty of the orchid?

State age, single or married, nationality, creed and experience. Give references as to ability, experience and character. Send photo if possible. **FRAMINGHAM NURSERIES**, Framingham, Mass.

At HILLCREST FARM, Weston, Massachusetts

Wanted from the first day of June to Labor Day, a man capable of taking charge of twenty boys from ten to seventeen years of age through their long summer vacation from school. He should be competent to teach them about soils and the growth of plants in the class room and to superintend their work in the orchard, fruit and vegetable gardens. He must have had some previous experience in the management of boys. The best of references should be sent to Post Office Box 166, Weston, Massachusetts, before a personal interview is granted.

We wish to thank those who have applied for the position at Hillcrest. But so far we have had no applicant whom we think could teach the boys in the classroom and superintend their work in the gardens. We would be glad of further replies.

FERNS

THE VICTORY FERN (*Nephrolepis victoria*)

We take pleasure in offering this new and valuable variety of *Nephrolepis*. It is a beautifully crested form of "Teddy, Jr." with fronds frequently subdivided on the ends, making a most unique, distinct, and desirable variety.

This fern was

AWARDED A BRONZE MEDAL

at the S. A. F. Convention at Detroit in August, 1919. The judges of the award reported as follows: "Special stress is laid on the new fern Victory, with a rapid growth and a branching at end of fronds, making it a shapely plant. It should be a commercial success, and we RECOMMEND IT MOST HIGHLY."

Strong plants, 2½-inch pots, \$3.00 per dozen, \$20.00 per 100
Strong plants, 3½-inch pots, 7.50 per dozen, 50.00 per 100

NATIONAL PUBLICITY CAMPAIGN

By ordering now, florists in all sections where winter has prevented opening of the ground, can have billboard signs at hand ready for installation when conditions permit. The billboard is a wonderful help in the publicity movement, and is an ornament of no mean order to a florist's establishment, no matter how it is used, and it flashes the message, "Say It With Flowers," as nothing else can. The sign is furnished, to anyone who has an opportunity to make an installation, at the exact cost, \$50.00, to our Publicity Committee, a cost which is about half that of a similar sign ordered by an individual. Shipment is made direct from the factory in Indiana, and freight charges are prepaid. Orders should be sent to the Secretary, accompanied by a cheque for the cost, and instructions as to best route to destination, with name of railroad station. Clubs and other organizations would do well to take up the matter of obtaining pledges for installations of billboards, as a liberal display of them in their communities would be of great service to our history, and help to perpetuate the message of the slogan. We have already noted what has been done by a few prominent organizations in this direction.

Our Publicity Committee is just now in urgent need of further support in the way of funds for a better continuance of the campaign. At present, they are dependent upon the funds pledged by those liberal-minded florists who have lent a hearty support to our project since its beginning and expansion, but with the funds thus forthcoming, we are only able to mark time, and prevent the benefit already promoted from fading away. Without the slightest doubt we can double this benefit by extending our effort, and this, of course, means the expenditure of more money, which must be collected from those whose interests it is to serve. Wherever there is a community big enough to support a florist, that florist's business is increased through the publicity afforded by the campaign. If all florists were to base subscriptions on even a small percentage of their increased business since the opening of the campaign, and would voluntarily send them in to the Sec-

The Best are the Cheapest

OUR TRADE LIST has been mailed and a copy is awaiting request from those not receiving one.

We grow nothing but

CHRYSANTHEMUMS

Our Novelties are worthy of consideration and the Standard varieties offered are the BEST.

Elmer D. Smith & Co.
Adrian, Mich.

retary, our Committee would not now have to make an appeal, for funds would be ample. But thousands of otherwise astute florists are hanging back, content to let other of their brethren shoulder the expense of this, the greatest and most beneficial movement ever promulgated in the trade, or in few other trades. Unlike other trade slogans, "Say It With Flowers" conveys a message so widely appreciated, that perhaps only one class of people is unaffected by it, and that class has our sympathy and gratuitous service when in need of flowers—the poor and destitute.

Arouse yourself, then, Mr. Non-Subscriber. Help us to help you to still further increase your business by increasing the demand for your products. You should believe in this campaign as you do in your religion, and support it. You share in the benefit resulting, so why not in the expense of conducting it. If you think the matter over at all seriously, you will, afterward, send a cheque to the Secretary for an amount which your conscience dictates you should send.

JOHN YOUNG, Secy

1170 Broadway, N. Y.

HOW MUCH DO YOU POSSESS?

Character is like stock in trade; the more of it a man possesses the greater his facilities for making additions to it. Character is power, is influence; it makes friends; creates funds; draws patronage and support; and opens a sure and easy way to wealth, honor and happiness. Thus said Hawes.

Can you picture our publicity campaign with its high ideals based on character of this nature as just read and doesn't it embody all that is mentioned. Nothing could better express the purpose of our campaign than the words of Hawes and yet we find many who have as yet not seen the way to further the results so well established in so short a period by helping materially, so that the character as well as the business itself will continue to grow and establish further patronage and support.

The S. A. F. has every reason to be proud of its achievement in so short a time and all the contributors will be amply repaid by the increased volume it will eventually cause. It simply means that when we all get behind the movement its benefits will be multiplied more and more.

HENRY PENN,

Chairman National
Publicity Campaign.

Short P. O. Address: L. J. Reuter Co., Boston 72, Mass.

PHILADELPHIA.

The Locust street greenhouses at Oxford are now being operated by the estate of J. H. A. Hutchison (the late owner) who died January 10th. It is reported that the greenhouses are likely to change hands about April 1st, 1920.

John Elliott, who operates a greenhouse at Willow Grove was seriously

hurt by a boiler explosion on the 19th inst. and had to be taken to the Abington hospital. The Willow Grove enterprise is a side line. Mr. Elliott is connected with the Heacock establishment at Jenkintown most of his time.

The Wilson place at Oxford has been bought by R. M. Patterson, who is running it along similar lines.

Harris & Holden has opened a greenhouse in Wilson, N. Y.

NEWS NOTES.

J. J. Higgins has opened a handsome new store at 273 Yonge St., Toronto. The new quarters are noticeable for space and a feature is a large work room.

The new officers of the New Haven County, Ct., Horticultural Society are: President, Alfred E. Doty, Vice-President, C. Lewis Alling, Treasurer, David Kydd, Secretary, William J. Rathgeber.

No. 7

THE TALK OF THE TRADE

I had quite a nice talk with Carl Hagenburger while in Chicago and succeeded in getting what I went after. I doubt if very many florists in the country know just how he succeeds in having for market in the fall and through the winter such fine plants of his different cherries and always in the small sizes. I know anyone can grow them large, but that isn't what we want. The storeman likes the small plants, three to four and one-half inch pots, and I made up my mind some time back that I would try to get Mr. Hagenburger to give me the secret of growing these in small sizes. Here it is; it isn't much, it isn't complicated, it is simply what anyone can do if they wish.

Don't pinch. From the time the seed is sown until marketed, the plants should never be pinched. Mr. Hagenburger sows his seed during January, carries them along in small pots until the ground is open, and then plants into the field in rows the same as you would plant field-grown carnations, and avoids always heavily fertilized ground. As a matter of fact, cherries do better when grown on a light sandy soil with very little feed. In the fall when the plants are taken from the field they are immediately potted, and if there is a little bottom heat they will do better, as this will stop them from dropping the foliage.

Of course they can be raised from cuttings but do not give such an even well-shaped plant. I counted several of the plants that he had on exhibition at the Chicago show; for instance, he had one plant in a four-inch pot that carried 66 berries. The plant stood only about six inches above the pot with very close to a twelve-inch spread. Another one in a three-inch pot stood four inches above the pot, spread close to seven inches and carried 37 berries. These were of his new variety Holly berry, which is a seedling of Cleveland crossed with Melvinil. The berries are somewhat smaller than Cleveland and a trifle darker in color, very close to the true holly berry color.

Carnation Ruth Baur gives great promise for the commercial grower and I certainly hope it fulfils all the predictions I have heard made. Not one of the carnation experts with whom I have talked has failed to express himself favorably towards this new variety, and if it comes anywhere near to filling the good promises made, it will be a welcome addition to the list. Being a cross between Northport and Pink Delight, it has good parentage. You will remember that Northport was a very good grower; as a plant it had good commercial points, being a mighty strong grower in every way. We all know the good points of Pink Delight, and as to color, it comes into a class where a good one is needed. A good Gloriosa pink shade will find a ready welcome. From all indications now, Ruth Baur will be heavily grown for a number of years to come.

The Retailers' Night of the Boston Florists' Association has brought to my mind a number of points which I am going to bring out at the risk of starting an argument with either or both sides.

To begin with, the strong complaint from the retailers seems to be against the salesmen selling at retail in the market. As a matter of right or wrong, I think the salesmen are wrong. It is a practice which is not indulged in among wholesale markets in general. It isn't deemed wise or fair in many other cities; in fact in some places wholesalers catering to the retail store trade would find themselves in difficulties very soon if they followed out this practice.

On the other hand, isn't the retailer making quite a big story of this particular point? We will admit that it is wrong, but these discussions were started for the sake of helping conditions in general, and it isn't going to help matters such a great deal if only one small point is worked on and more helpful ones forgotten. I wonder if the grower, who is the one mainly to be considered, hasn't a right to expect a strong cooperation with the retailer? Cut flowers must be high in price under present conditions. While the market is high, matters come nearer to adjusting themselves than when the Spring, summer and fall months come along and there is an oversupply. How about devising ways and means of

CARNATION RUTH BAUR.

moving the heavy crops that prevail for more than half of the year and moving them at better prices.

I am reminded of several florists of other parts of the country who to my mind are doing a great deal to help the grower; for instance, there is one who has two stores. One caters to a high-class trade,—fancy automobiles, drivers in uniform, door men in uniform and all the other fancy touches that go to please the wealthy customers are made use of. This florist holds to a more or less high price regardless of how the market goes, but he also runs a branch store under a different name and takes advantage of every flower or plant that happens to be in heavy supply and pushes it through this branch store. Special sales of carnations at 75c., \$1 and \$1.50, roses at low prices, in fact any flower or plant that can be bought in quantity to help clear the market and pushed out at a small profit is handled through the branch store. A few stores of this kind in every city would do a great deal of good.

Then again I think of another prominent florist, one with a broad way of looking at conditions, who also maintains branch stores. He has a number of them, several catering of course to the fancy trade with all of its frills, and quite a good part of the price for every dozen carnations or roses can be credited to service and its trimmings, but he also has a "Cash and Carry" store; no charge accounts, pay for the flowers and take them along with you. The parcel is done up neatly, but no elaborate trimmings are made use of. Another of his branches is mainly a plant store, and then again he has a store situated in the negro section and every employee in that store is a colored person. Now all of these stores are under one head, but they are not recognized so by the public.

Again we have the far Western florists who really seem to have a broader way of handling the cut flower business than what we understand in the East. Florists in small towns in such states as the Dakotas, Kansas and others that we think of as almost Western wilderness, we find to be decidedly up to date. Special sales are held of whatever may be plentiful in the great Western markets, particularly Chicago, as this is a natural feeding ground. Small cities of from twenty to thirty thousand population are so well educated into the use of flowers that in one case I heard of one of these towns using two hundred orchids per

week for several weeks. They sold at a fair price at wholesale in Chicago and were moved out to the retail trade at a good profit. Those florists out there are continually on the watch for anything that they can buy in quantity as soon as the market breaks, and help to use it up, which of course is a great help to the growers.

The florist in a section who will persist in selling carnations at \$1.50 per dozen when he has to pay \$10 per hundred for them is simply forgotten and ignored if he won't listen to reason, for the other fellow goes right along with a legitimate price and looks out that his service is of the best quality, and sooner or latter the low price florist finds his mistake.

Another point that is causing a lot of hard feeling is the habit of buying stock from private estates. This doesn't seem right and the commercial men cannot be blamed for objecting strongly to this practice. I don't believe that fault finding is going to do a lot of good; good results can only be accomplished by selling flowers, and that means selling them when they are plentiful. Anyone can sell them now, and whatever price they will bring comes pretty near to being legitimate. Boston retailers have not paid any more than other Eastern markets, not so much in some cases.

Before I stop, I want to say just a little word against the practice of the growers this year. When the market is high it doesn't seem hardly the best plan to take part of the small amount of stock coming into Boston and send it out to other towns. Take for instance the big Chicago market which carries a pretty good level month in and month out. If any of our New York friends have gone into Chicago at any time for a number of weeks past and tried to buy stock above the market, in many cases they would have been refused. The Chicago houses would say "No, we haven't enough to go around for our regular customers," so I doubt if the outsider would have been able to buy enough to make it any decent sort of a speculation.

TO CHARGE FOR BOXES.

Notice Sent Out by Wholesale Florists of Boston.

Wholesale florists of Boston are to follow the example of wholesalers in other cities and charge for boxes. They are sending out the following notice:

Owing to the prevailing conditions and on account of the increased cost of boxes and overhead expenses we, the undersigned, **WHOLESALE FLORISTS OF BOSTON**, will be compelled

to charge for boxes. **BOXES ARE NOT RETURNABLE.**

We have very carefully considered the situation and we are not charging the extra cost of boxes on flowers, as our sales are based on prevailing market prices.

Yours very truly,

THE FLOWER MARKET

There has been no break in the market as yet and naturally would not be until after Valentine Day. Supply and demand are just about equal, and both were cut down by the severe storm.

Roses and carnations and other standbys are still on the scarce side and remain high in price but with the lengthening days and more sunlight a change is in order very soon. Very few of the shorter grades of Beauty roses are arriving and the long stemmed are still bringing from one to one and a half. Russells, Premiers, and Columbias are more accommodating in the lower grades but the demand runs more to the shorts, which tends to keep the price high there as also in the better flowers. Hadleys and Hoosiers are conspicuously off-crop. Ophelia, Killarney, Maryland and Jonkheer, are in fairly good shape. In Philadelphia carnations start at fifteen but on the fine ones like Pink Delight, Mrs. Ward, Benora, Laddie, etc., they reach the twenty mark. Sweet Peas are very fine and are the great standby in moderate priced work. Orchids continue in good shape, the cattlys being now backed up by some very good, fancy varieties of *Cypripedium*.

In Boston the average price on roses is twelve cents for cheap stuff and thirty-five cents for good quality. Carnations sell for ten and fifteen cents, and specials at twenty. These are just about the same prices as prevail in New York, Buffalo and Pittsburg. In Boston callas are \$3 and \$4 per dozen; in other markets they run a trifle higher. Sweet peas sell in Boston for three and four cents, and some with extra long stems at five. About ten thousand came into one salesman Wednesday morning after being held up by the storm, but they were moved without difficulty. In New York, peas are selling up to six cents but in other markets are a cent or two lower.

Freesias run four to eight cents in Boston and New York, but better prices have been obtained in Pittsburg. Violets run about two dollars.

THE
BOILER OF

Unequalled Fuel Economy

Kroeschell Boilers, the best by test since 1879. Forty years' experience.

THE QUALITY PLACE OF BOSTON

Regarding the Kroeschell, it is the best we have ever had and satisfactory beyond our expectations. It heats up especially quick and has saved us considerably already in the price of fuel. When we are in need of another boiler we will give the Kroeschell the first consideration.

Little Talks on Advertising

Last week mention was made of the excellent manner in which Campbell's Flower Shop, in Lawrence, Mass., features the telegraph delivery in its advertising. I am glad to find that other florists are beginning to appreciate the possibilities of enlarging their business in this way. Now that the national campaign is being carried on to popularize flowers and to get them into the hands of people who have never bought them freely before, it behooves florists everywhere to assist in the general movement. Now the Florists' Telegraph Delivery Association offers one of the best mediums by which florists may gain new business and no money is lost which is expended for the purpose of informing the public about telegraphing flowers. It is seldom that so much space is given to this feature as in the Campbell advertising, but perhaps other florists will follow his example.

Sawyer, the Florist, of Clinton, Mass., has a very good double column advertisement in the papers of his own city. In this advertisement the Florists' Telegraph Delivery Association is played up in large type. Mr. Sawyer goes on to say, "We can deliver guaranteed flowers in any city or town in United States or Canada by telegraph on very short notice. We would be pleased to tell you about this service." Mr. Sawyer also lays considerable emphasis on "Say It With Flowers," which is used at the top of his copy.

Henry Penn, of Boston, has made rather ingenious use of one of the illustrations adopted by the S. A. F. for its magazine campaign. It is the picture which shows a young man in front of a florist's shop handing a bouquet of roses to an attractive young woman. A simple outline has been made at the front of the picture to suggest an automobile in which the young woman is sitting, and the name "Penn" has been lettered on the door of the florist's shop. "Say It With Flowers" stands out with great prominence.

All this kind of advertising is of

course more or less general in character. Its effect is bound to be of value when it is continued with regularity so that the name of the florist becomes fixed in the mind of the person reading it, and the average advertiser does not realize how important this is. Just the other day I heard of a man in a suburban town who wanted to make a purchase quickly but never before had patronized a local dealer. Instantly, however, there came to his mind the name of an advertiser who had kept his copy running steadily. He even remembered the phone number and the order was placed at once. Very likely it will be followed by other orders.

When, however, a florist desires to advertise only intermittently, or for the purpose of moving surplus stock, or increasing trade in a dull week, it is much better for him to make a specific offer which will bring immediate results. Such an advertisement was recently put out by J. Albert Brodrib, of Hartford, Ct. Mr. Brodrib uses generous space for the following announcement in display type:

SPRING FLOWERS

- Freesias\$1.00 a bunch
- Violets 1.50 a bunch
- Sweet Peas 1.00 a bunch
- Narcissus 1.50 a dozen
- Mignonette 2.00 a dozen
- Pussywillows20 a bunch

FLOWERING PLANTS

- Freesias\$1.00 each
- Cyclamen 1.00 each up
- Cinerarias 1.50 each

There is just one criticism which might be made. It would seem better if "Narcissus" were put in the plural, "Narcissi," to correspond with the other flowers in the list.

At the bottom of his advertisement, Mr. Brodrib uses a slogan which is catchy and clever. It reads:

"We are as near to you as your telephone."

It would seem, however, as though it were a mistake not to have the tele-

phone number of the store appear in the advertisement. The telephone number should be used always if possible. And it is a great asset to florists to have a number which is easily remembered.

To go back once more to Penn's advertisement, we find a little line at the bottom which reads:

"Boston's flower phone—Beach 6900." This line in itself is worth not a little. Florists should make every effort to prevent having their telephone numbers changed also, because a single change may mean a considerable loss in business.

NEWS NOTES.

John Duhn, landscape gardener on the estates of well-known residents of New York and Connecticut for almost half a century, died recently in his home on North street, Greenwich. He was 81 years old. Mr. Duhn had been in charge of the estates of William Rockefeller, on the Boston Post road; Commodore E. C. Benedict and the late Thomas Canary. He leaves a widow.

Howard W. Vose, an Attleboro, Mass., florist, is dead at the age of 35 years. He was born in Lincoln, R. I., and established himself at Attleboro, eight years ago.

M. M. Dye of Salamanca, N. Y., has taken G. A. Hale into partnership. The firm name will be Dye & Hale.

The New Bedford (Mass.) Horticultural Society has elected the following officers: President, Leonard J. Hathaway, Jr.; Vice-president, Joseph A. Nolet; Financial Secretary, Walter K. Smith; Secretary, Jeremiah M. Taber; Treasurer, Walter A. Luce.

At a recent meeting of the Knights of Columbus at Lowell, Mass., James J. MacManmon, the florist gave a very interesting talk on his recent visit to Ireland.

James Alexander, Jr., a well known florists of Poughkeepsie, N. Y., died recently. Doctors think his trouble was due to inhaling paint fumes when decorating flower boxes.

HORTICULTURE, 78 Devonshire Street, Boston 9, Mass.

The city of Boston is divided into districts, and each district is numbered. If you will observe the number allotted to HORTICULTURE, it will facilitate the delivery of mail to this office.

One difficulty follows so closely upon the heels of another that growers and florists find themselves forever wondering what is going to happen next. Just now it is the coal situation which bothers them. To be sure there are many growers who were forehanded or fortunate enough to get in a considerable surplus. There are many others, on the contrary, who have only enough coal to last them for a few weeks. Of course the storm caused much delay in handling and the railroads have not been behindhand in seizing coal on the road if necessary to keep their trains going. The possibility of a railroad strike is the bugaboo looming on the horizon. It is the extremely cold weather, though, that has caused much of the trouble. In general, the growers have consumed 25 per cent. more coal this year than ever before. Several of those who thought they had enough coal to carry them until next summer are finding the bottom of the bins has already been reached.

Just at present the florist industry is in what might be called a state of fluidity.

By that is meant that in many ways it is changing, old customs being broken up and new methods constantly being introduced. For the most part these changes are for the betterment of the industry and are brought about through an enlarged business perspective on the part of growers and dealers alike, as well as by a reaction to the general tendency of the times towards greater publicity and more economical office methods. It is to be hoped that while this period of transition exists the trade will not overlook the opportunity to improve its system of handling accounts and in altering certain business practices.

There is a general feeling, for one thing, that bills should be paid much more promptly, thus doing away with costs of collection which sometimes amount to a much larger figure than would be expected. This bugbear of slow collec-

tions has existed for a long time in the trade. There is no reason why it couldn't be done away with in a large measure with the result that the whole industry would be better off. Slow accounts often make a serious drag and impede the progress of enterprising concerns.

Another question which has come to the fore, especially in the East, deals with the expense of packing flowers for shipment for a considerable distance. Many wholesalers are firm in the opinion that the boxes themselves should be charged for. It is understood that in most places such a charge is made, and this is now true in New England. The boxes used often cost a dollar apiece, and the shippers say that this charge should be borne by the buyer. The packing expense will still fall upon the shipper, making perhaps an even arrangement. No doubt retailers will have arguments on the other side.

It should be one of the efforts of the various local florists' organizations to thresh out these questions in open meeting. As it is now there is much quiet and decided talk on the side, but all too often such problems are side stepped when a general discussion might lead to a satisfactory solution. Certain it is that the local organizations should devote themselves largely to these practical matters and not hesitate to deal with them, because to do so may seem like treading on dangerous ground.

The fact is that in spite of the high prices which have prevailed in the past year, profits in many instances have not been much greater than in former times. Only recently a very successful wholesaler was heard to say that his percentage of profit was no greater than four years ago. The fact is that production costs have grown at a surprising rate, notwithstanding an assertion recently made that the increase in the price of florists' supplies has been smaller than that in almost any other important industry. In any event it is time now to prepare for conditions which are certain to change in one way or another before long. There was never a better time to get the industry on a good economical business basis and to work out the problems which have long proved a source of irritation and in some instances of loss.

This does not mean that there will ever come a time when competition will not prevail or when there will not be local jealousies and individual differences, but it does mean a readjustment which will give a sounder economic foundation for the industry and eliminate some of the questionable practices which have grown up in the past.

What will the end be? The Federal Horticultural Board at Washington seems to have gone quarantine mad. The members of the Board must see bugs everywhere.

Indeed, they must dream bugs, unless they lie awake for fear bugs will get them if they go to sleep at all. Now the Board contemplates a quarantine of all foreign countries on account of the European corn borer. A hearing on the proposition is being held as we go to press. Moreover an announcement has just come in of another hearing a little later about a quarantine against Mexico. Furthermore, the Board gives notice of public hearing to consider the advisability of quarantining Asia, Japan, Philippine Islands, and Oceania on account of dangerous plant diseases and insect pests, including Japanese apple cankers, Valsa mali and Diaporthe mali, blister blight, Taphrina piri, and rusts, Gymnosporangium Koreaense and G. photiniae, and injurious insect pests, including the Oriental fruit moth, the pear fruit borer, the apple moth, Psylla pyrisuga, Lecanium glandi, and Lecanium kunoensis, new to and not heretofore widely prevalent or distributed within and throughout the United States.

As we inquired at the beginning, what will the end be? Can anybody tell?

"You in your small corner and me
in mine."

H. F. Michell Co. do not have much surcease from the rush in their retail store from year's end to year's end, but what little they have comes in January. This year they have utilized the breathing spell in putting in a new cashier's department on the retail

floor at 5th and market and in moving the private office of Fred Michell Sr., and Fred Michell Jr., from the street floor to more commodious quarters in the rotunda. The Michell store has long been a model one and they are all the time adding another little touch to it for the benefit of all concerned.

The H. W. Doughten Co., of Moorestown, N. J., and N. Y. City, who make a specialty of grass and clover seeds at wholesale have just opened a new branch. This is at 216 South Front street and occupies the whole building with the counting rooms on the second floor. Mr. Fred Horton, late of P. B. Mingle & Co., is the Philadelphia manager.

The Stokes Seed Co. have closed their store on Market street and moved to Moorestown, N. J., where they have their growing establishment and will operate as the Stokes Seed Farms Co.. The Floracraft Gardens at the same place, are now being run by Anna Taylor Stokes, widow of Walter P. Stokes. There is a considerable range of glass and a specialty is made of plants and cut flowers for the Philadelphia market.

Robert Lockerbie moves to Greenville, S. C., to associate himself as a partner in the Greenville Florist Co. This makes an opening for a good grower and manager for Mr. Lockerbie's present place—the Belk Greenhouses at Charlotte, N. C. Applications may be sent to Mr. Lockerbie.

Recent Philadelphia visitors include James F. Fox, Milwaukee, Wis., and A. L. Barber, Cleveland, O.

TO FIGHT ROSE ROOT BEETLE.

Professor J. G. Saunders, head of the Plant Industry Board of Harrisburg, Pa., has arranged with the Federal Horticultural Board at Washington to place an expert in all greenhouses in the Philadelphia district where roses are grown to fight the rose root beetle. It is announced that the agent will be maintained by the State Agricultural Department of Pennsylvania, but will be paid by the government.

Grevellia Robusta is another plant which is useful in spring at the time when porch boxes are being made and cemetery urns filled. The variety known as Silk Oak also makes a good house ornament and retailers find a ready sale for it. Sow the seeds now where it will have a little bottom heat. They germinate quickly and like a temperature of 60 degrees at night. They must be kept shaded and moist at the beginning, but soon can be given full sunlight. Pot them up in two-inch pots, in which they will make roots rapidly, and when they are well established you can grow them along rapidly in a temperature of 55 degrees. Later, of course, they will need to be shifted to larger pots.

This is also a good time to sow fern spores, but remember that you need a particularly porous soil for them. Good drainage, too, is of the utmost importance. Many growers always use a covering of glass as well as extra shade until growth appears. They should be grown well up to the glass and pricked out when large enough. The growing ferns will need a good compost, which may well consist of fresh loam in two parts, leaf mold and sandy peat, one part each. When potting up both the small and the larger ferns remember that they resent having the soil worked too firmly around the roots. Of course, all ferns need an atmosphere which is filled with humidity, although there should be no dripping of moisture on the plants, and a 60 degree temperature suits them well. One way of handling the pans after seed has been sown in order to supply moisture is to sink them to the rim in a tub of water. These directions are of a general nature, and of course, practiced fern growers use somewhat different methods in handling the different varieties, a few of which are somewhat whimsical as to temperature, moisture, and soil.

Easter coming fairly early this year, April 4, some of the plants which are much in demand then will need to be kept growing rather rapidly. This applies especially to Acacias. Yet even Acacias must not be kept too warm. From 40 to 45 degrees at night will be about right as a rule. It is very important that they are kept from drying out at the roots, and they will need a good overhead syringing every fair day. Also the matter of ventilation must not be neglected. Cuttings can be started in a cool propagating house and will root readily, producing good plants for the market. Pot them up in 2½-inch pots and pay particular attention to the soil, for Acacias like a mixture of loam, fibrous peat and sand in equal parts.

COMING EXHIBITIONS.

CHICAGO FLORISTS' CLUB.

There was a remarkable increase in attendance at the meeting on Feb. 5, this occasion being the annual Novelty Exhibition of this organization.

The following applications for membership were presented:

C. A. Wrizley, Supplies, 130 N. Wells St., Chicago, Ill.; Robt. Koehler, Seedsman, 172 N. Wabash Ave., Chicago; Vincent Neil, Seedsman, 172 N. Wabash Ave., Chicago; H. W. Miller, Florist Supplies, 324 W. North Ave., Chicago; Herbert Stone, Retail Florist 4011 Milwaukee Ave., Chicago, Ill.

Elected to Membership.

Ralph B. Howe, Seedsman, 231 W. Madison St., Chicago; Wm. F. Collins, 1457 E. 70th St., Chicago; Walter G. Poehlmann, Florist, Morton Grove, Ill.

Mr. C. W. Johnson, Chairman of the Committee on Convention Arrangements presented a complete report in detail covering expenses incurred in connection with the Convention of the American Carnation Society and the Illinois State Florists Association.

The funds to carry on this work were raised by subscription.

Mr. Johnson also presented a supplementary report in behalf of Mrs. C. L. Washburn, Chairman of the Ladies' Reception Committee. A rising vote of thanks was extended to Mr. Johnson and Mrs. C. L. Washburn for the able and efficient manner in which they conducted this affair.

Vice-president A. T. Pyfer presented a report of the S. A. F. & O. H. Directors' Meeting which was received with great interest.

Report of Judges.

Vase of Rose Queen sweet peas grown by Gustav Swenson, Elmhurst, Ill., honorable mention; Vase of Mignonette, extra fine spikes, grown by Chris Blameuser, Niles Center, Ill., honorable mention; Vase of new rose, Frank Dunlop, grown and exhibited by John H. Dunlop & Son, Ltd., Toronto, Canada, showing exceptionally fine grown specimen blooms on extra heavy stems, fine foliage, also smaller vase of the same variety, awarded the club's certificate of merit; Vase of Rainbow Freesia showing variety of color, exhibited by Peter Pearson, Chicago; Vase of narcissus, Sir Watkins, Emperor, Bicolor Victoria, from American grown bulbs, grown and exhibited by Peter Pearson, Chicago, honorable mention; Vase of the "Ball" Giant Calendula, showing large full double flowers of deep orange color on long stiff stems and good foliage, certificate of merit.

The judges were Wm. J. Keimel and Albert Erickson.

GENERAL NEWS NOTES.

The new quarters of Roman J. Irwin, the wellknown plant broker of New York, are at 321 Sixth Ave., on the third floor.

Max Schling, D. McKenzie and A. M. Schneider have incorporated the Crestwood Greenhouses, New York, with a capitalization of \$10,000.

J. F. Fritz, long connected with the Vaughan Seed Store in Chicago, is now with the Everett R. Peacock Co.

The J. K. Rugowski Seed Co., has been incorporated at Manitowoc, Wis. The capitalization is \$100,000. Mr. Rugowski has two new asters to his credit. They are called Pure Honor and Meritorious Pink.

DREER'S CANNAS

This season we harvested the finest and largest crop of Cannas that we have ever grown.

KING HUMBERT

And all the other good varieties you should have are included in our list and the roots are heavy and firm.

PRICES: The prices quoted are for dormant roots, which can usually be supplied until about the first of April, after which pot plants will be sent out and in which the advance in price will be as follows: All varieties listed at \$7.00 or less per 100 will be supplied in pot plants at \$8.00 per 100 or \$70.00 per 1000, and on varieties listed above \$7.00 per 100 there will be no change in price between dormant roots and pot plants.

All have green foliage unless otherwise specified.

TWELVE SPECIAL VARIETIES

Carmine Beauty. Deep bright carmine flowers freely produced high above the heavy dark-green foliage which has a narrow red margin. 1½ ft. 15 cts. each; \$1.50 per doz.; \$10.00 per 100; \$90.00 per 1000.

Cheerfulness. No more appropriate name could be given to this brilliant novelty. Its beautiful bright fire-red or deep orange flowers appear early and continue without interruption until frost. Add to the prevailing color a golden border and center with each petal flaked carmine-crimson and you may form some conception of this fascinating variety. 3½ ft. 10 cts. each; \$5 cts. per doz.; \$6.00 per 100; \$50.00 per 1000.

City of Portland. A wonderful bright rosy-pink, much deeper in color than Mrs. Alfred Conard or Hungaria; a free-flowering, vigorous grower. 3½ ft. 20 cts. each; \$2.00 per doz.; \$12.00 per 100; \$100.00 per 1000.

Fairy Queen. The dwarf, compact plants of this distinct novelty are covered with flowers from spring until fall. The plant rarely exceeds 3 feet in height. The flowers, of a clear rose-pink, are of medium size, good substance and borne upright on stout stems in great abundance. Each flower has a distinct cream-colored border.

We believe Fairy Queen will become one of the very popular Cannas. 60 cts. each; \$6.00 per doz.; \$50.00 per 100.

Flag of Truce. A large-flowered, creamy white with faint pink dots on each petal. The general effect is white. Not as white nor as tall as Eureka, but quite distinct and valuable. 4 ft. 35 cts. each; \$3.50 per doz.; \$20.00 per 100.

Golden Eagle. A wonderful clear golden-yellow of free, upright growth. The flowers are produced in large clusters well above the foliage. 4 ft. 35 cts. each; \$3.50 per doz.; \$20.00 per 100.

Harmony. Great clusters of good-sized, well formed Geranium red flowers are arranged on good stems in such a manner as to give the trusses an almost globular appearance. 3½ ft. 20 cts. each; \$2.00 per doz.; \$15.00 per 100.

Pocahontas. (Bronze-leaved Olympic). Large oriental-red flowers borne on firm upright stems, just high enough above the foliage to show the entire head. The foliage is a dark bronze-green with emerald shadings; the ribs a darker bronze. 4 ft. 20 cts. each; \$2.00 per doz.; \$15.00 per 100; \$100.00 per 1000.

Poppy. Intense poppy-red. Large perfect florets in good trusses over greenish-bronzy foliage. Rich and effective. 5 ft. 20 cts. each; \$2.00 per doz.; \$10.00 per 100; \$90.00 per 1000.

Remarkable. This effective bronze-leaved variety stands out boldly among other sorts, not only on account of its height (6 ft.), but because of the beautiful scarlet-carmine trusses of bloom surmounting the rich green-bronze foliage. 20 cts. each; \$2.00 per doz.; \$10.00 per 100; \$90.00 per 1000.

Surprise. The brightest red Canna we have. It surpasses in brilliancy such popular varieties as Meteor and Lafayette and produces its great trusses with equal freedom. 4 to 5 ft. 35 cts. each; \$3.50 per doz.; \$25.00 per 100.

The President. When the Canna Firebird was introduced its immense florets and bright red color immediately insured its popularity. In offering The President we may best describe it as possessing all the good qualities of Firebird enhanced by extraordinary vigor and perfect healthy foliage. It grows to a height of 5 ft. and produces its immense trusses of giant florets in great profusion. The most sensational introduction of recent years. 35 cts. each; \$3.50 per doz.; \$20.00 per 100.

DREER'S SELECTED CANNAS

Including many comparatively new varieties, which we can offer in quantity at popular prices.

	Doz.	100	1000
Allemania (Orchid Flowered). Salmon with golden markings; 5 ft.....	\$0 50	\$3 50	\$30 00
Alphonse Bouvier. Brilliant crimson; 6 ft....	50	3 50	30 00
Austria (Orchid Flowered). Large, pure canary-yellow with reddish dots in center of upper petals; 5 ft.....	50	3 50	30 00
Beacon. Rich cardinal-red; 3½ ft.....	1 00	7 00	60 00
Brilliant. Rich yellow with two red petals; 3½ ft.	50	3 50	30 00
Cloth of Gold (Dreer's). Very free flowering, golden yellow; 3 ft.....	60	4 00	30 00
Dazzler. One of the best, deep fire-red, very free; 3½ ft.....	1 00	7 00	60 00
Dragon. Very rich dark, ox blood red; 3 ft....	75	5 00	40 00
Dr. E. Ackerknecht. Carmine lake, suffused with deep carmine, bronze foliage; 4 ft.....	50	3 50	30 00
Duke of Marlboro. An attractive deep brilliant crimson; 4 ft.....	50	3 50	30 00
Eureka. The best white for massing, very free and of fine habit; 4½ ft.....	2 00	15 00	125 00
Fanal. An intense, fiery cinnabar-red, an ideal grower holding its flowers well above the foliage, one of the best bedders; 4 ft....	\$5	6 00	50 00
Favorite. This is the best red spotted yellow Canna yet introduced. The color is a rich, deep golden-yellow, the flowers are produced on strong stems well above the foliage; 5 ft.....	50	3 50	30 00
Feuermeer. Brilliant fiery-scarlet; 4 ft.....	\$5	6 00	50 00
Firebird (Oiseau de Feu). A remarkable variety perfectly formed florets, 7 to 8 inches across, of a brilliant cardinal-red; 4 ft.....	1 50	10 00	90 00
Gaiety. Reddish-orange mottled with carmine and edged with yellow. The tongue is yellow and densely spotted with carmine; 4½ ft.	50	3 50	30 00
Garam. Very large bright carmine-red flowers, freely produced; 3½ to 4 ft.....	50	3 50	30 00
General Merkel. Scarlet suffused with orange, base and edge of flowers marbled with golden-yellow; 4 ft.....	50	3 50	30 00
Gladiator. Deep yellow freely dotted with red, a popular bedder; 4½ ft.....	50	3 50	30 00
Goethe. Very attractive. Bright deep orange flowers of a very penetrating shade; 4 ft.....	\$5	6 00	50 00
Gold bird (Oiseau d'Or). This is the yellow companion to Firebird; the immense soft canary-yellow flowers are of good substance; 4½ ft.....	85	6 00	50 00
Golden Gate. Yellow and red; 4 ft.....	60	4 00	30 00
Hungaria. Flowers large, in good-sized trusses freely produced. The color is a beautiful rose pink; 3½ ft.....	\$5	6 00	50 00
Italia (Orchid Flowered). Bright orange-scarlet, with broad golden-yellow border; 6 ft.....	50	3 50	30 00
J. D. Eisele. Vermilion scarlet overlaid with orange, good bedder; 4½ ft.....	60	4 00	35 00
Jane Addams. Color a deep rich yellow with a touch of red at the throat; a clean, vigorous grower of upright habit; 4½ ft.....	75	5 00	40 00

	Doz.	100	1000
Mrs. Alfred Conard. One of the very best cannas in commerce today. The large exquisite shaded salmon-pink flowers are produced in great abundance on robust upright plants; 4 ft.....	1 75	12 00	100 00
Mrs. Karl Kelsey (Orchid Flowered). Orange-scarlet, suffused and striped with yellow; 5 ft.....	50	3 50	30 00
Mrs. Woodrow Wilson. A rich but soft crimson-pink, with very large flowers, a robust grower and free bloomer, 4 ft.....	2 00	15 00	
Olympic. Rich Oriental-red, shading lighter to the centre and dappled carmine. The individual florets and trusses are very large and of excellent form; 5 ft.....	\$5	6 00	50 00
Orange Bedder. One of our own introductions and unquestionably the best of its color, a particularly bright orange with just sufficient scarlet infusion to intensify the dazzling mass of color; very free flowering. Awarded a certificate of merit by the S. A. F. & O. H. at New York, August, 1917; 5 ft.....	60	5 00	40 00
Panama. The color and markings of this splendid Canna are unusual; the rich orange-red face of the petals is bordered with a broad edge of golden-yellow; 5 ft.....	60	4 00	35 00
Pennsylvania. Vermilion-scarlet overlaid with orange; 5 ft.....	50	3 50	30 00
Philadelphia. Rich deep red; 4 ft.....	60	4 00	35 00
Queen Charlotte. Rich pomegranate-red bordered with golden-yellow; 3 ft.....	85	6 00	50 00
Rosen Gigantea. Large flowers, borne in such abundance that the mass of color is amazing. A deep rich rose; almost a coral-carmine; 4 ft.....	1 25	8 00	70 00
Salmon Queen. Rosy salmon-scarlet, blending to a rosy carmine towards the centre, a very effective bedder; 5 ft.....	85	6 00	50 00
Scharfenstein. The beautifully formed, large round florets are produced in compact but graceful trusses. The color is a unique light red salmon with orange and carmine suffusions that forms a most attractive addition to the range of colors found in Cannas; 5 ft.....	85	6 00	50 00
Schopenhauer. A rich brilliant red with yellow throat, very free; 3 ft.....	75	5 00	40 00
Souv. de F. Langle. Very distinct orange-red color, edged with gold; 4½ ft.....	75	5 00	40 00
Superb. Deep salmon with bronze foliage; 4½ ft.	60	4 00	35 00
The Gem. An entirely distinct spotted variety. The immense trusses of flowers are borne on upright branching stems well above the foliage, and are of deep cream or straw-yellow, spotted with deep carmine; 4½ ft.	1 50	10 00	90 00
Thiberg. Entirely distinct, of a soft rosy-carmine; the throat of the flower is of a creamy-yellow, and the edges of the petals are also pale yellow; 3 ft.....	60	4 00	35 00

	Doz.	100	1000
King Humbert (Orchid Flowered). The most popular Canna. Great orange scarlet flowers surmount the vigorous dark bronze foliage throughout the season; 5 ft.....	75	5 00	45 00
Lafayette . In some respects resembles the variety "Meteor" but the flowers are not quite as dark, stands more erect and the plant grows taller; 5 ft.....	1 00	7 00	60 00
La France . Deep carmine pink; 4½ ft.....	1 25	8 00	70 00
Lahneck . A free grower. The color is rose with lines and shadings of scarlet carmine hues, a narrow golden border adds to its beauty; 4 ft.....	85	6 00	50 00
Louis Reverchon . A splendid bedder, large cochineal-red flowers; 4½ ft.....	60	4 00	35 00
Maid of Orleans . Rich cream ground, mottled and shaded soft pink; 4 ft.....	60	4 00	30 00

	Doz.	100	1000
Venus . Flowers of fair size of a soft rosy pink with a pretty mottled border of creamy yellow; 3½ ft.....	75	5 00	40 00
West Virginia . Intense rich crimson scarlet with golden edge; 3 ft.....	50	3 50	30 00
Winter's Colossal (Orchid Flowered). The largest flowered Canna. The flowers often measure eight inches across and are of a bright scarlet; 5 ft.....	75	5 00	45 00
William Bates . A splendid free flowering yellow of good size; 5 ft.....	1 50	10 00	90 00
Wyoming (Orchid Flowered). Massive orange flowers which make a strong contrast with its rich bronze foliage; 6 ft.....	50	3 50	30 00
Yellow King Humbert (Orchid Flowered). A sport from King Humbert in which the foliage is green and the flowers yellow with red spots. Very attractive.....	75	5 00	45 00

GROWING SWEET PEAS IN CLUMPS

By Charles Elliott.

The modern Sweet Pea is the most beautiful and most useful of all our annuals and the growing of it should not be confined to the time honored practice of the long lines grown for cutting flowers for decoration or exhibition. For some years past I have resorted to many different plans of growing these plants for lawn and garden decoration.

One of the most pleasing of these plans is the planting of sweet peas in "clumps" or circles, with the end in view of producing large long stemmed flowers in a way that proved attractive, and added a good decorative subject to the garden.

These circles or "clumps" as we term them, consist of two stout stakes and sixteen bamboo canes eight feet high. We find it an advantage to construct these before planting, two stakes eight feet high are driven into the ground one on each side of a circle thirty inches in diameter, about five feet from the ground a wire hoop made of No. 9 wire is stapled to the stakes, the bamboos are then placed five inches apart around the circle and tied securely to the hoop. At planting time enough strong plants of a strong growing variety are planted and one shoot is lead up from each of the canes and two up each stake. We usually arrange these clumps on either side of the walk and if possible have the twin clump across the walk of the same variety, the clumps being 7-8 feet apart from center to center, in the intervening spaces we plant many of our common annuals with very pleasing results, and if the sweet pea vines are kept disbudded and given a nice mulch early, they produce some very creditable flowers. From the clump featured in the accompanying photograph a nice bunch was cut June 5, 1919 and was given a score of 95 points by the floral committee of one of our local Horticultural Societies.

We find these clumps an excellent arrangement for testing novelties, and showing off their good qualities to sweet pea enthusiasts.

We plant these clumps with "fall sown" plants whenever possible, since they bloom earlier, and last longer, and produce better flowers.

Strong growing varieties gave best results, and we have had many varieties go "over the top" of the eight foot canes.

Excellent varieties for this purpose are Valentine Elegance, Ivorine, Austin Frederick, La France, Mrs. Cuthbertson, Adelaide, Mrs. Tom Jones, Duchess of Portland, Blue Picotee.

A cream colored variety with a groundwork of Petunia "Rosy Morn" is a pleasing combination. A clump of "Tea Rose" with Saponaria vaccaria is also very charming.

Alex Malcolm with Calendula Orange King, makes a brilliant show, and many pleasing schemes can be worked out with these clumps of Sweet Peas with other annual flowers.

I regret that the accompanying picture did not do justice of the general

view of this walk. The clump in the foreground is "Edna May" Imp. and was carrying many fine flowers at the time, which did not come out clearly in the picture.—*American Sweet Pea Bulletin.*

WILLIAM BERGER.

An old and respected Philadelphia florist passed away on the 5th inst. William Berger, 238 Queen Lane, Germantown, established himself there in the business about fifty years ago and continued same actively up to within recent years. His sons also followed in his footsteps, and a large retail establishment bears the Berger name at the busy corner Cheltenham and Germantown avenues, while in the city proper a wholesale store has been conducted by Berger Brothers for many years. William Berger was an honest, hard working man; stuck close to his business; raised a large family, and gained a competence. He leaves a fine record behind, honored and respected by all who knew him. The writer knew him well for thirty years and speaks from personal knowledge.

DREER'S "Riverton Special" Plant Tubs

No.	Diam.	Ea.	Doz.	100
10	20 in.	\$4.50	\$49.50	\$375 00
20	18 in.	3.30	36.00	293 00
30	16 in.	2.35	26.00	200 00
40	14 in.	1.90	21.50	170 00
50	12 in.	1.30	15.00	115 00
60	10 in.	.90	9.90	77 50
70	8 in.	.75	8.00	61 00

The Riverton Tub is sold exclusively by us, and is the best ever introduced. The neatest, lightest, and cheapest. Painted green and bound with electric-welded hoops. The four largest sizes are equipped with drop handles.

F. A. Smith, superintendent of the
Essex County Agricultural School,
talked on "Training Boys in Agriculture
and Horticulture" at the monthly
meeting of the Horticultural Club of
Boston in the Parker House Wednesday
night. President Ernest H. Wilson
presided and about 20 members attended.
W. A. Manda of South Orange,
N. J., talked on the coming orchid
show in Horticultural Hall, March 24
to 27, at which he is to be an exhibitor;
and also spoke of the orchid conference
which is to open March 25.

CARNATIONS.

Dover, Ohio, Jan. 5, 1920.

Dear Sir:—I was very glad to read
Mr. Goddard's "Talk on Carnations."

When we peruse the past and anticipate
the future very often we find our
opinions and the facts somewhat in a
bottle of ideas.

Superior culture is much of the advancement
from a technical standpoint. When we
look back at the various sorts from LaPurity
up to many of the present sorts, have we
made really any great epoch?

The older sorts were croppers largely
because we grew them more naturally,
now by going over our plants we top often
that causes the growths to come in over a
long time, in fact quite through the whole
season as against larger cuts at specific
periods else we grow them to largely come
in at specific periods or "crops" hence
some growers are off crop, others always
are more or less in "crop."

When we look at the cycle development
of Hintzies White-Portia, we can claim
no great advance in freedom.

If we look at "Albertini" as it was at
the shows we have not gone far in size.
As they have been bred when we have
size we do not have freedom and vice versa.

When we have certain types of foliage
we have relative freedom, etc., etc., other
correlative units pro and con.

All in all Mr. Goddard's talk is very
good.

When Mr. Goddard turns prophet we
must greatly disagree.

In my very expansive breeding of
Gladioli I have observed certain features
in breeding that when rightly employed
give no decided advances.

In the net results we have gladioli
that are away superior to such glorious
sorts as Sulfur King, Peace, America,
etc., in all points.

For a long time we made the progress
Mr. Goddard observes, but in observing
these new results we have applied them
to carnations, with a result that we
have a hardy race that averages 5 of
100 blooms as fine as Pocahontas,
Matchless, Yellow Prince, etc. at the
same dates.

These have far better colors and dew,
etc. does not fade them as it does the
indoor type. Again we have a much
broader range of colors and shades.
Many are very fragrant. In growth
stem on these are very good, in time
we expect to increase freedom, etc.
These are far healthier than most
commercial sorts we have, in fact Mrs.

Meyer Green Silk Line Thread, \$3.00 per pound.

Green Silkline at \$2.50 per pound, in case lots of 25, 50 or 100 pounds.

Liberal discounts in 500 or 1000 pound lots.

Ward and its sports are their only rivals as to health.

Following this same line of breeding we have in evolution new types of forcing sorts. Already we have in sight a race that we expect ultimately to give us 30 to 100 blooms per plant, equal to Doris, Alice, Matchless, etc. When we get the quality of Laddie out with better health, quicker growth, we expect then to yield 12/25 blooms per plant.

A continuous summer bloomer is the hardest nut to crack, although we hope to evolve in this field also, in fact we are exploiting the whole field for betterment of carnations.

Some years ago I anticipated the future gladioli (then unseen), when gladioli growers read it the letters it brought me made me feel a bit that I had gone too far, however, two years later my seedlings brought out the very gladioli I predicted for the future.

Now I presume my carnation story will likewise be ridiculed and laughed at, but we have them so far along that another cross will give us epoc making carnations. The carnation will be earlier and later, freer, larger, healthier, better in every way.

Roses bred along this line will outclass the very freest, force quicker, maximum quality in every way. Already we have roses absolutely hardy at 30 degrees below zero—the forerunner of epoc making roses—among them absolutely thornless.

Breeding corn along these lines will give us corn that ought to be 65/75 day corn—our very best sorts we will have in large, better ears in every way and ripen in 80/120 days, if not 80 to 90 days.

Breeders as a whole are asleep, but the world does not move in its cycles in a day.

The breeders as a whole cannot take the growers place, each must excel in his niche, but withal, the future will soon unfold great advances, at least such is the view of

C. BETSCHER.

CROSS-FERTILIZING GLADIOLI.

H. C. Meader Tells How It Is Done.

Editor HORTICULTURE,

Dear Sir:—For several years I have been looking for some reliable information on the cross-fertilizing of the gladiolus, and I wish that you would send me through HORTICULTURE some brief information on this subject.

I would like to know if there are any special rules such as when to take pollen from any special flower and also how to transfer it.

I have read articles telling how certain flowers of colors, cross-fertilized together will make other flowers of certain colors, but I have never run across any information such as special rules, etc.

H. F. P.

To successfully cross two varieties of the gladiolus a clear sunny day should be selected. Some provide themselves with pollen brushes, scissors, cheesecloth, etc., the operation is quite simple and may be perfectly successful when performed with the bare hands; no tools are necessary.

Remove the stamens (pollenbearers) by cutting or pinching out, from the flower you wish to be the seedbearer, or female parent. This prevents self fertilization.

Ordinarily from about 10 o'clock in the forenoon to five in the afternoon, the pistil opens or flattens out and exudes a sticky heavy liquid which moistens its surface.

Arriving at this stage the flower is receptive and ready to be pollinated, which is done by cutting or carefully pinching out the stamen from the other parent and gently brushing the Pollen over the sticky and receptive stigma of the seed parent.

To assure success the pollen must be powdery and well ripened, and if all goes well, the flower will almost immediately wilt and close in its petals, the life giving principle travels down the stem and fertilizes the immature seed in the pod and growth commences.

Seed should be gathered when the pod turns brown and starts to crack open. Nothing is gained by allowing the pod to open fully on the stalk as the seed is mature when opening starts.

If left too long ungathered many of the finest seed will have blown away. When seed is harvested it should be kept in a warm dry place to thoroughly cure, and can then be sown at once or kept for several years without losing its vitality.

I have discovered through experiments covering a long period that seed may be harvested in November, cured and sown indoors in greenhouse. Have gathered the tiny bulbs in March, cured them perfectly in dry sand left in a warm place, then in early May planted them out in the open ground.

Many will bloom, if treated this way, the same year, and the increase will be about the same as the ordinary growth of two seasons. When freshly planted, gladiolus seed should be kept quite moist and not allowed to dry out until well up.

It is entirely unnecessary to rub off the wings or membrane from the seed before planting, as some do. The growing of gladioli from seed is a most fascinating pursuit as no matter how many thousands are grown no two ever bloom exactly alike and practically all are beautiful.

H. C. MEADER.

GARDENERS' & FLORISTS' CLUB OF BOSTON

C. S. Strout of Biddeford, Me., was the principal speaker at the meeting of the club, Tuesday night. Mr. Strout reviewed his trip to the Carnation Convention in Chicago and related some of the incidents that made the most impression on him. He said that the exhibit would have been a very meagre one had it not been for the Eastern growers. The Middle West growers did not make much of a display because of the fact that the prizes did not nearly match the prices being paid in the market. Mr. Strout said that his display staged by Mr. Englemann cost him a lot of money. Twelve hundred flowers were used and about three hundred more were put on the tables. It was Mr. Strout's observation that flowers arranged after the English fashion were much more difficult to judge than those displayed in the American way, although the English treatment makes a fine appearance. Mr. Strout also had something to say about the disadvantages suffered by growers living far from the centers. He said that the nearby man got the pick of the offers while florists from a distance had to take what was handed them.

Mr. James Wheeler of Natick said that the small prizes given at the shows were not a great inducement to exhibitors, as illustrated by the situation in Chicago as Mr. Strout described it. Mr. Wheeler had on hand an attractive display of Godfrey callas and told how he grew them. He said that he has his callas in solid beds and

keeps them watered by the Skinner irrigation system. In this way he gets much larger flowers than when he grew them in pots.

Mr. Gustave Thommen was another speaker, giving most of his attention to the oil heating apparatus which has been installed at the Moore greenhouses in Arlington.

Among the displays was one of a new dark crimson carnation submitted by C. J. McGregor & Son of Newburyport. Mr. McGregor said that this carnation was a cross between President and Winsor.

BOSTON NOTES

Mr. Henry Robinson, the well-known wholesaler, has been confined to his home with a severe cold for several days.

Mr. Peter Miller, of the Thomas J. Grey Co. who has been critically ill, has passed the crisis and is on the mend.

Much damage was done by the storm around Boston. The chief sufferer was Everett E. Cummings of Woburn. The weight of the snow broke down about 100 feet of a large sweet pea house, causing a loss of about \$10,000. Mr. Cummings immediately boarded up the end of the section which remained and shifted the steam pipes, by which action he saved a large part of the crop. This week he has been sending in remarkably good sweet peas from the damaged house.

The snow also caused the collapse of a storage house and an old barn on Allan Peirce's establishment in Waltham.

In spite of the bad weather, the orchid show scheduled for last Saturday at Horticultural Hall was held. About a hundred plants from the greenhouses of A. C. Burrage at Beverly were shown. These orchids were on the road for two days, the truck being stalled in the snow. The plants were saved by being wrapped in blankets and carried to a nearby house. J. T. Butterworth of South Framingham also famous as an orchid grower, had a display which included a plant with fifteen blossoms which was given a silver medal.

W. N. Craig, secretary of the Gardeners' & Florists' Club, has come out in a signed communication to the papers in which he favors daylight saving. Mr. Craig insists that many members of the Massachusetts State Grange favor the light saving, and that there is no economic foundation for the statement that daylight saving will increase the cost of horticultural products.

About March 1 Wax Bros. will move to 44 Temple Place.

MASTICA

For Greenhouse
Glazing

USE IT NOW

F. O. PIERCE CO.

12 W. BROADWAY
NEW YORK

Mastica is elastic and tenacious, admits of expansion and contraction. Putty becomes hard and brittle. Broken glass more easily removed without breaking of other glass as occurs with hard putty. Last longer than putty. Easy to apply.

WANTED—A nursery foreman. Must have extensive knowledge of ornamental varieties and be able to handle men. Good salary to start and good future. State age, single or married, nationality, creed and experience. Give references as to ability, experience and character. Send photo if possible. **FRAMINGHAM NURSERIES**, Framingham, Mass.

At HILLCREST FARM, Weston, Massachusetts

Wanted from the first day of June to Labor Day, a man capable of taking charge of twenty boys from ten to seventeen years of age through their long summer vacation from school. He should be competent to teach them about soils and the growth of plants in the class room and to superintend their work in the orchard, fruit and vegetable gardens. He must have had some previous experience in the management of boys. The best of references should be sent to Post Office Box 166, Weston, Massachusetts, before a personal interview is granted.

We wish to thank those who have applied for the position at Hillcrest. But so far we have had no applicant whom we think could teach the boys in the classroom and superintend their work in the gardens. We would be glad of further replies.

FERNS

THE VICTORY FERN (*Nephrolepis victoria*)

We take pleasure in offering this new and valuable variety of *Nephrolepis*. It is a beautifully crested form of "Teddy, Jr." with fronds frequently subdivided on the ends, making a most unique, distinct, and desirable variety.

This fern was

AWARDED A BRONZE MEDAL

at the S. A. F. Convention at Detroit in August, 1919. The judges of the award reported as follows: "Special stress is laid on the new fern Victory, with a rapid growth and a branching at end of fronds, making it a shapely plant. It should be a commercial success, and we **RECOMMEND IT MOST HIGHLY.**"

Strong plants, 2½-inch pots, \$3.00 per dozen, \$20.00 per 100
Strong plants, 3½-inch pots, 7.50 per dozen, 50.00 per 100
Extra fine specimens: 8-inch, \$3.00; 10-inch, \$5.00; 12-inch, \$7.50.

NATIONAL PUBLICITY CAMPAIGN

In sending a cheque for a yearly subscription to the Publicity Campaign Fund, O. F. Eskil of Iron Mountain, Mich., writes: "Sending this money gives me more pleasure than anything else I can think of unless it were a greater cheque."

This is the proper feeling. Mr. Eskil knows that the campaign is a wonderful asset to the florists' trade, and he writes just as he feels. It is to be regretted that more do not appreciate the increased demand for flowers, everywhere, which has come as a result of our publicity movement. Every florist in the land is interested in the successful issue of our campaign, and is benefited by it, yet how few are willing to help themselves by helping along the campaign! So far, our results are due to the support forthcoming from less than ten per cent. of the trade, men who have subscribed for the benefit of our industry generally, but who are more than satisfied with results as they see them, and particularly as they have noticed them in their own surroundings. And it is these men who are in greater part bearing the expense of our work this year, as far as our Publicity Committee has been able to carry it.

Here are a few questions for non-subscribers to consider and they should consider them deeply, for surely they are sufficiently interesting from business point of view:

Are you not prepared to admit that publicity for flowers has been instrumental in increasing the general demand for them?

Are you not conscious of the fact that our slogan, "Say it with Flowers," is exerting a tremendous influence among people who hitherto have not looked upon our products as a medium for the conveyance of sentiment?

Are you not aware that through individual display, through our magazine announcements, and in various other ways, our slogan meets the eyes of millions of people each and every day?

Could you for one moment think that a great deal of business does not result from this continuous flashing of a message whose appeal is not to any particular class, but to every man and woman, young or old, in a country of considerably over a hundred millions in population?

Do you realize that this publicity

Our Novelties are worthy of consideration and the Standard varieties offered are the BEST.

Elmer D. Smith & Co.

Adrian, Mich.

costs money, but very little when the returns are taken into account, and you are only asked to contribute a mere trifle toward the expense?

Is it impossible for you to determine that you will send in this "mite" the committee needs so much in order to increase and perpetuate the good already obtained? A tenth of one per cent. of your profits would, perhaps, make a very respectable contribution. If every florist making a living from our industry would contribute even this small fraction of his income our committee would not have to be continually appealing to those who in the circumstances should need no appeal, and who should really be most anxious to keep going and extend a movement productive of so much good to them in a business way.

Don't be afraid to contribute because yours may be but a small mite—there is nothing to prevent you adding to it at any time. A five dollar contribution is accepted in the spirit in which it is given. Many who originally sent in this amount increased it as their interest deepened. When you once make a subscription you are apt to take a broader view of our work, and you no longer look upon your support in the way of a donation, you believe it to be a mighty good investment—and that's what it really is.

JOHN YOUNG, Secy.

1170 Broadway, New York.

GENERAL NEWS NOTES.

At the recent meeting of the Tennessee State Florists' Association the following officers were elected:

President, A. J. McNutt, Knoxville; vice-president, T. H. Joy, Nashville; secretary and treasurer, Prof. G. M. Bentley, of the University of Tennessee. The last named has filled the two offices mentioned since the organization of the association in 1915.

A. M. Henshaw, president of the New York Florists' Club, has almost recovered from his serious illness.

Henry C. Rowe is to open a new flower store in the Montrose apartment building, Chicago, with Heaton Nichols in charge.

The Vose Flower Shop, of Woonsocket, R. I., recently suffered a loss of about a thousand dollars by fire.

The St. Louis Garden Club is to conduct a spring flower show May 15 and 16. It is possible that the Missouri State Florists' Association will hold a meeting at the same time.

George H. Pring has become horticulturist at the Missouri Botanical Garden. Other appointments are L. P. Jensen as arboriculturist, Paul A. Kohl as floriculturist, and John Noyes as landscape designer.

THE TALK OF THE TRADE

The greenhouse trade in general has been going through severe trials and this is particularly true of those growers who do a shipping trade in the plant line; for instance, those who turn out large quantities of rooted cuttings and small plant stock of the various lines that are marketable and in demand at this time. Embargoes of all descriptions are placed, shipments are frozen, and the express companies do very little to make good, and then one storm after another has come along causing heavy losses, particularly the last one.

I wonder how many florists who are buying stock realize these difficulties and are as considerate as they should be? Those who are shipping stock for themselves I am sure understand very well and are reasonably patient, but I say to you florists who have not had some of these hard experiences that you should be patient and have as much consideration as is possible. I have just received a few words from a friend who is in the cutting line and he writes under date of February 13, as follows:

"We are snowed in here since February 4, no trains, no cars and no mail until yesterday and that only letter mail by sled. Crust on snow makes it impossible to run snow plow. Can fill no orders till we get dug out. Have cuttings ready, but dare not pack until we see clear track to ship. Snowing again today like fury, may be another big one—if so, Lord help us."

This is just one example of what many are up against.

Among the losses occasioned through the last storm, we learn of Mr. Everett E. Cummings of Woburn, Mass. One of his houses of modern construction and apparently in first-class condition caved in, resulting in the loss of an excellent crop of sweet peas just coming in with fine stems and good quality in every way. His loss is estimated to be around \$10,000. Then we hear of the Florex Gardens of North Wales, Pa., where the largest individual houses in the world are located. A part of one of these large houses was crushed in and their loss is estimated at close to \$25,000. It was also re-

ported that at the Duckham-Pierson place in Madison, N. J., about 100 running feet of a large house was damaged, which will also run into a heavy loss, and besides these there are any number of places losing all the way from one or two boxes of glass to twenty-five and thirty boxes, to say nothing of the loss of crops attendant.

I know of one grower who had a fine lot of geranium cuttings just ready for market. We all know how scarce geranium stock is. It will bring almost any price, and regardless of price there isn't more than half enough to supply the demand. This grower lost a big block of cuttings, and besides being unable to fill his orders, is short of stock for himself.

To top it all, a lot of our good friends are going along in a sort of hand-to-mouth way as regards coal. All of these expenses and risks which turn out so disastrously during these severe spells must be carried in mind by those who are advertising cut flow-

ers and finished plants to the retail trade, and it is their duty to do their part towards educating the public into paying a fair price for florists' stock of all kinds.

I have just heard that A. M. Campbell of Philadelphia is going to increase his planting of Laddie carnations the coming season. He is one of the largest growers of this variety in the country at this time, and he certainly must have faith in it or he would not be increasing for the coming year. Mr. Campbell showed Laddie in excellent shape at the Chicago meeting of the American Carnation Society, and he is without any doubt an expert grower. The blooms that he exhibited ranked well up with the winners. They couldn't all get first prize, but the least we can say is that they were all good. The vases shown by Goddard, Strout, Campbell and those coming from the Joseph Hill range were each and every one A1 in every respect.

A Good Type of Geranium

Growers of Godfrey calla will be interested to know of the success Mr. James Wheeler of Natick has made in handling this calla in a slightly different way than is common. Instead of growing them in pots, he has planted them right into the soil on the ground, and contrary to predictions by some who have had good experience in growing callas, he has succeeded in getting excellent production and blooms of remarkable size, especially for the Godfrey calla.

CORN BORER QUARANTINE.

Massachusetts Horticultural Interests Vote to Send a Delegation to Washington.

A largely attended meeting called by Chairman Farquhar of the Legislative Committee of the New England Nurserymen's Association was held at the State House on Wednesday, Feb. 18th, for the purpose of considering the quarantine which the Federal Horticultural Board proposes to put upon all the New England States, New York and Pennsylvania on account of the European Corn Borer.

Dr. Gilbert, Commissioner of Agriculture, presided, and Mr. Farquhar urged that the Commissioner be sent to Washington to act for the State. It was finally decided, however, to send a delegation consisting of Commissioner Gilbert, Mr. Farquhar and President Adams of the New England Nurserymen's Association, Mr. Moore and Mr. Wyman of the Market Gardeners' Association, Mr. Thomas Roland and Mr. W. H. Elliott and Mr. McCarthy, florists, and W. N. Craig, secretary of the Gardeners' and Florists' Club representing the growers, to attend the hearing to be given Tuesday, Feb. 24th, by the Federal Horticultural Board on that date. At the suggestion of Mr. Thommen it was also voted to notify all the different horticultural societies so that they might also send delegations if they so chose.

Pres. J. Edward Moon of the American Association of Nurserymen was present and made a rousing speech in which he said that the hearing should be subject to the rules and regulations formulated to control such hearings, but about which little or nothing has been heard. He also called attention to the fact that the call for the hearing was not signed as it should have been. He then read from a report of the F. H. B. dated Oct. 19, 1919, in which it was stated that the European Corn Borer was a single brooded insect outside of the Atlantic Coast, and as such was not a very dangerous pest. He wondered why the Board had changed its opinion in this short time. Mr.

Moon urged that the local interests should not be stampeded, and should use good judgment at the hearing so as not to invite unnecessary antagonism. He said that Mr. John Watson, Secretary of the American Association of Nurserymen, would be present at the hearing.

Mr. Farquhar in his talk briefly reviewed the general situation and spoke of the great loss from the necessity of having plants imported by permission of the Federal Horticultural Board first sent to Washington. He said that Mr. Albert Burrage of Beverly recently imported a large number of very valuable orchids, bringing them in by way of San Francisco. He was ordered to have them first sent to Washington, and chose the Southern route to avoid danger of freezing. When the plants reached Washington, however, they were allowed to freeze there, and so were utterly ruined. He urged examination at the port entry and said that Chairman Marlatt of the F. H. B. had admitted the inadvisability of this plan and said to him recently that he proposed to ask Congress for \$100,000 to be used for this purpose.

Comm. Gilbert stated that he would immediately get in touch with the other states interested so that a co-ordinated effort to prevent the quarantine might be made. The desire is to have the affected states themselves deal with the situation. Mr. Farquhar pointed out that with the Horticultural Board in charge; not only might the eight states mentioned be quarantined as a whole, but that also one state might be quarantined against another and one section of a state against another section, which would make an extremely difficult situation.

MOON AND BARRON SPEAK.

Talk to American Society of Landscape Architects at a Meeting in Boston.

J. Edward Moon, president of the American Association of Nurserymen, and Leonard Barron, Editor of the Garden Magazine, were the two speakers at a meeting of the American Society of Landscape Architects held at the St. Botolph Club, Boston, on Tuesday night. The attendance was large and much interest was shown in the remarks of Mr. Moon in regard to Quarantine 37 and other quarantine measures which are interfering greatly with the development of the landscape business. Mr. Moon had much to say about the efforts which are being made to secure a modification of these drastic measures. He also spoke about the necessity of devising some means of obtaining protection for plant novel-

ties, another matter in which the landscape architects were much interested.

Mr. Barron talked about the garden magazines and the different trade papers, their relation to the horticultural interests of the country and the necessity of giving them adequate support. He had with him several different publications by which to prove that in the horticultural trade less support is given the trade papers than in certain other lines of industry.

DAHLIA AND GLADIOLUS GROWERS.

They are to Hold an Important Meeting in Boston February 28.

A call has been sent out for a very important meeting of all the dahlia and gladiolus growers in New England. This meeting is to be held in Room 136, State House, Boston, at 10 o'clock, Saturday morning, February 28.

The meeting is called especially to consider the Illinois Quarantine which is working a great injustice upon the growers of New England. Mr. J. K. Alexander of East Bridgewater, and Mr. B. Hammond Tracy of Wenham, say that they are constantly receiving orders for shipments of bulbs to Illinois, but are debarred from sending them. This is largely the retail trade, the result of advertising in the magazines. Apparently the people of the State of Illinois have not yet awakened to the fact that it is impossible for them to buy dahlia and gladiolus bulbs from outside sources.

ANOTHER GREENHOUSE COLLAPSES.

According to a newspaper report one of the Jones Bros. Greenhouses at Wappinger Falls, N. Y., collapsed under the heavy snow, causing the firm quite a heavy loss. Only a portion of the house gave way, but this destroyed a number of growing plants and the loss will probably reach a considerable amount. The other part of the house was hastily braced up and care was taken so that the other houses would not be similarly affected.

NEW ENGLAND.

J. Edward Moon, president of the American Nurserymen's Association, was in Boston a part of two days the past week. He stated that Mrs. Moon was quite ill, for which reason he was eager to get back home.

Washington P. Gaw of the Elwell Conservatories at Kennebunk, Me., has been confined to the house by illness.

Little Talks on Advertising

"There is no case on record of a merchant who has tried advertising, tried it right, and then quit."

This statement was made by Salem N. Baskin, an advertising manager at a recent convention in West Virginia.

"Many merchants have tried advertising and quit in disgust. They found that it did not pay. Such an experience may be likened to the experience of the anaemic young man who was counseled by his doctor to leave the city and inhale the invigorating crisp air of the mountains. The young man went to the mountains and, noticing no change in his condition after the first day, returned to the city, satisfied that he had given the doctor's suggestion a fair trial, and that it had failed.

"Advertising does not pay unless it is advertising in the fullest sense of the word.

"Do not think of your occasional advertising, disconnected, unrelated, as 100 per cent. advertising.

"Your advertising must function just as regularly and just as systematically as the opening and closing of your store, with as much attention to the details as you lavish on your windows.

"Do you think you could do much business if your windows were attractively displayed and made an appeal about one day out of seven, or about one day every two weeks?

"Do you think that your valuable window space, a reason for your high rent, could show a return commensurate with its cost if the windows were not used consistently and efficiently?

"Do not play with advertising, and do not let advertising attack you for an expenditure at odd and uncertain intervals. Employ advertising as you employ a salesman in your store, and keep it busy. Know what your advertising for the year will cost you, and know that far from saving, you are losing money when you conserve a dollar of that appropriation."

Houghton-Gorney, of Boston, put out a very unique St. Valentine's Day advertisement, and one which showed

much thought. At one side was an outline view of the famous tower of the Park Street Church, with the flower store at its base. On the opposite side of the three column space was a reproduction of an old fashioned bouquet with an arrow through the center. This was the bouquet which the firm featured for the occasion, and being quite different from most of the florists' offerings, it was received with much favor.

Houghton-Gorney, Thomas F. Galvin, and Penn were the only Boston florists to make any special Valentine Day display. Penn, as usual, had quite an elaborate advertisement, while that of Mr. Galvin was much more restrained, simply featuring the name and carrying the word "Flowers" in large type.

MODERN SALESMANSHIP.

At the Convention of the Tennessee Florist Association, at Knoxville, Mrs. Edith Goetz, of Joys, the Florist, in Chattanooga, had the following to say on Modern Salesmanship:

My subject, "Modern Salesmanship" is a much abused one. Will do what I can to give you my idea of it.

To be "modern" the first essential is an attractively arranged store. Of course, it is impossible to keep the work room of your shop clean, but the front should always be neat and attractively arranged. The ice boxes should be filled with good stock (if it can be obtained) each vase plainly marked.

These essentials must be cared for before salesmanship successfully begins.

BOUVARDIA

There is always a shortage in

BOUVARDIAS

2 1/2	inch pots.....	8.00	70.00
April Delivery			

C. U. LIGGIT

303 Bulletin Bldg. Philadelphia, Pa.

Your customer should be greeted with a smile or "Good morning." If you are busy when they enter, their presence should be acknowledged with a nod and the information that you will wait on them as soon as possible.

Fifty per cent. of your sales can be made without showing any stock or photography. A suggestion is what most customers want and if you can show a knowledge of your stock and an interest in your customer, your sale is easily made.

The order should be plainly copied and if the item is charged address and all other information should be plainly shown on the ticket.

The customer should always be asked "If they wish to pay" for the purchase. Many charges could be avoided if this question were asked.

Modern Salesmanship goes further than a sale or copying of the order—the package should be neatly packed and attractively tied and delivered in the same condition.

No sale is complete until the flowers are received and the recipient is pleased.

Thank your customer, ask if there is anything else they need and request that they call again.

THE ST. MARTIN

The Finest All-around Strawberry That Grows

Color—Rich, deep red

Size—Sixteen berries to a quart jar

Flavor—Unsurpassed

Long season, good canner, perfect blossoms and strong runners. Awarded the silver medal of the Massachusetts Horticultural Society

Page and half page space, not consecutive, rates on application.

SUBSCRIPTION RATES:

One Year, in advance, \$1.00; To Foreign Countries, \$2.00; To Canada, \$1.50.

Entered as second-class matter December 8, 1904, at the Post Office at Boston, Mass., under the Act of Congress of March 3, 1897.

It seems to us that Frank R. Pierson, of Tarrytown, went straight to the nub of the matter at the hearing given the orchid growers by the Federal Horticultural Board at Washington, when he said:

"This is not a tariff discussion."

Mr. Pierson went on to say that the real question and the only question with which the board had a right to concern itself, was whether it was safe to import orchids. He further called attention of the board to the statement of the Secretary of Agriculture in connection with such quarantines that the burden of proof was on the government. He advised the board to keep this fact in mind.

Mr. Pierson's attitude was thoroughly justified, because the discussion at the hearing had been largely on the question of the ability of American growers to raise orchids. Now this is, or should be, entirely beside the question at issue. It is a curious fact, however, that the Horticultural Board seems to consider the insect situation as only one feature of their deliberations. In his opening remarks, Chairman Marlatt went so far as to say that assurances had been received by the board that the quarantine as it now stands had given the orchid producers the protection that they long needed. He predicted that in a few years there would be sufficient home grown orchids to satisfy all reasonable needs in this country. He then made the bald statement that the question now is, "Can the orchid business in this country take care of itself with such importations as are permitted?"

It seems to us that in taking such a position Dr. Marlatt has arrogated unto his board such powers as were never before given to a similar department, and which were never intended to be given his board under the terms of the act creating it. If the Horticultural Board should concern itself simply with the exclusion of plants which in its belief threaten the horticultural interests of this country, there would be no particular grounds for criticism. When, however, it sets itself up as a tariff board and virtually undertakes to determine what plants shall or shall not be grown in the United States, it is taking authority which belongs to Congress alone.

This curious and wholly unwarranted attitude of the board is a perfectly just cause for complaint, whether one

believes that certain quarantine regulations are required or not. It is one thing to have a difference of opinion upon this point, and quite another thing to find the question resolving itself into a discussion of how best to protect American nurserymen and plant growers from foreign competition. If the whole matter should be put before Congress on this basis, we feel sure that Congressmen would soon put an end to any practice by which a simple bureau takes to itself a purely legislative function.

Mr. Wilson's View

Dear Sir:

My mail brings a copy of a "Notice of Public Hearing to Consider the Advisability of Quarantining Asia, Japan, Philippine Islands, and Oceania on Account of Dangerous Plant Diseases and Insect Pests."

Here is a cool announcement of a proposal to quarantine half the world and the half of the world to which our gardens and greenhouses are most indebted for their most valuable plants, and, moreover, the half of the world to which we may look for a continued increase to our collections. In view of Quarantine No. 37, now in operation, one may ask: "Will raising the fence a little higher make any difference?"

The object supposed to be obtained by these quarantine acts is the exclusion of pests dangerous to vegetable growth of all kinds. This object is impossible of accomplishment in its entirety since such pests as are of a bacterial nature and others of fungoid origin may be disseminated by air currents even as was the germ of the recent influenza epidemic. Those of insect character can travel on material other than living plants. Witness the corn-borer now alarming New England farmers and the wood-borer found in American packing cases and about which Australia is just now agitated. The logical end of all such legislation is to cut off all international trade and intercourse. These quarantine acts will not effectively keep out disease. They will accomplish no more in that direction than proper inspection at ports of import would do and have done in the past.

Panics are everywhere contagious. The effect of the actions of the Federal Horticultural Board is seen in recent hysterical legislation in Illinois. It view of this and what it threatened in New Jersey, it behooves all those interested in horticulture, both trade and amateur alike, to pause a moment and consider the logical outcome. Following the lead of the F. H. B. state will quarantine against state, then country against country until finally it will be impossible to move a plant from one's garden to that of a neighbor. The trade has the choice of two things, either to resist this pernicious legislation with all its might or wind up business while the winding up is possible. The cry of quarantine measures assisting nurserymen and florists is mere camouflage. The bankruptcy court is where it leads to and, worse than this, it means not only the bankruptcy of the horticultural trade but the bankruptcy of garden art in America.

The same mail brought a notice that the House had appropriated \$239,000 for free seeds. Here's the secret of much legislation. Politics, pure and simple. The farmers' vote is necessary to the politician. Maybe the only way of injecting reasonable commonsense into the powers that be is by bringing them to an appreciation of the value of the votes held by those who love flowers and gardens and cater to their needs.

E. H. WILSON.

Arnold Arboretum, Harvard University,
 Jamaica Plain, Mass.

A Giant Everbearing Quality Fruit which the U. S. Dept. of Agriculture states, "should be tried in gardens in all parts of the country."

La France King of Raspberries

(Everbearing)

Raspberries from early July to November! From your own garden to your own table! La France Everbearing Raspberry is Scheepers' latest introduction to the world of horticulture. Immense clusters! Giant berries—twice the size of the ordinary varieties! Firm, luscious fruit; deep-colored, wonderfully rich-flavored! And few seeds!

Tested and Proved for Three Years Continuous Crop—Easily Propagated

La France Everbearing is a remarkable plant. Its hardiness and habits—its prolific bearing qualities, and its ease of propagation—make it a horticultural phenomenon. Planted early in the spring, it loses no time getting started. Begins bearing as early as the first week of July (the first season!) and "never lets up"—keeps right on with break after break, cluster-laden shoots, until all vegetation is completely frost-checked for the season. Even then its remarkable nature continues in evidence; La France has demonstrated its hardiness by sur-

viving temperatures as low as 30° below zero.

La France Everbearing Raspberry propagates freely and very rapidly. A dozen plants will produce a good-sized berry patch in an incredibly short time.

Its rapid growth, its hardiness to withstand extreme cold, its immunity from fungus and insect diseases, its remarkable all-season production of fruit, make La France Everbearing by all odds the raspberry for home gardener, fruit grower or farmer.

What a Few La France Growers say:—

T. A. Havemeyer,
Pres. Hort'l Soc.
of N. Y.—"Far superior to any other raspberry. Very prolific. Large clusters. Luscious berries. A remarkable plant. Should be grown by every garden owner, fruit grower, farmer, nurseryman."

F. A. Bartlett, Tree
Specialist, Stamford,
Conn.—"The finest acquisition in years. Winter of 1917-18 killed all my varieties except La France."

Wm. Ziegler, Great
Island, Conn.—"La France 8-ft. canes loaded with large clusters. Shall discard all other varieties and grow only La France."

J. B. Cobb, Stamford, Conn.—"Produces large crop for almost four months. Consider La France 'King of Raspberries.'"

Now's the time to order Supply is very limited

Plant La France early this spring and have berries the first days of July! But order now. Twelve plants—a reasonable first plant-

ing—delivered to your door for \$20. Six for \$10.50. Single plants, \$2, postage paid. (Not more than two dozen plants to any one customer.)

Flowers Under Glass

It is important to remember that with the lengthening days roses will need to be fed more heavily than in the past two months. Mulching also becomes important now, and of course there is nothing better for the purpose than old, well decayed cow manure, but this manure should be thoroughly decomposed before it is used. If you must use fresh manure, be very careful not to burn the roots or foliage. There is a right and wrong time to put on mulch. The right time is when the plants are just being started for another crop, with growth about three inches long. Don't put the mulch all on at once, and if it is at all fresh, use only about a shovelful to four square feet of bench. Have rather more to the front than to the back and center. As soon as the mulch has been put in place, give the benches a good watering so that the fertilizing elements will be washed into the soil and also to kill whatever heat there may be in the manure. If you have to keep the house closed tightly, mulch only one bench at a time in order to avoid the presence of too pungent fumes. If you have any choice in the manure available, choose that which has only short straw in it.

With a threatened scarcity of geraniums at Easter time and later in the spring, there will doubtless be a big call for potted petunias. Many people are now buying them for window boxes as well as for cemetery bedding and garden use. The variety Rosy Morn still continues the favorite pink petunia, and without doubt will sell readily this season. You will need plants from early May up to midsummer, and in order to have a succession it will be necessary to keep sowing seeds every ten days or two weeks. These petunias are not at all difficult to grow from cuttings if you keep your house at about fifty-five degrees. A thrifty plant will produce many cuttings, and you can increase your stock rapidly.

Do not delay in sowing the seed of

Association.

cornflowers if you want good spring
plants. Sow the seed rather thickly
and then transplant to small pots.

It is time to make the first planting
of the large bulb gladioli. Naturally
you will use the kinds which have
proved popular in the past few years,
for example, America, Prenchleyensis,
Mrs. Francis King, Halley, Augusta,
and Mrs. Frank Pendleton. To be sure,
the bulbs are very much higher than
in past years, but there is every reason
to believe that the flowers will sell
readily at the increased price which
will have to be charged for them. By
planting now in benches you can have
a crop Memorial Day, and need not
worry about any that are left over
after that occasion. It takes some skill,
though, to time the opening of gladioli.
Climatic conditions may disarrange
the best laid plans. Use old manure
if you like in planting glads, but not
fresh manure. Instead of the latter it
is better to use pulverized sheep manure
and bone meal. Fifty-five degrees is
about the right night temperature.

You must make plantings of sweet
peas within the next two weeks if
you want them for Memorial Day. Experience
seems to show that the best
way to grow peas is in a solid bed, and
of course a house must be used in
which there is ample head room. Oftentimes
sweet peas may be used in the center of a
house without interfering greatly with other
crops. There are some growers who still
have their sweet peas on benches, but it is
very hard to get a good crop in this way.
Don't bother with too many kinds, es-

pecially if you are restricted for space. In fact, you can confine yourself to pink and white and satisfy most of your customers. It will save labor if you have your wires up before you put in the seed and if you have had any experience with sweet peas you will know that rather thin sowing is preferable.

EDWARD W. HABERMEHL.

Edward W. Habermehl, junior member of the firm of J. J. Habermehl's Sons, died on the 11th inst of pneumonia, after a short illness. With his brother, John he took an active interest in the business founded by their father and from boyhood to the time of his death gave it his whole time and attention. The firm were growers at first and retailed their own plants and flowers, their stand at 22nd and Diamond St., Philadelphia being in the early days on the outskirts of the city; but of late years they branched out and became leaders in the retail center, with stores at the Bellevue-Stratford, the Ritz-Carlton, etc., drawing their supplies from near and far and using their own range of glass mostly for conservatory purposes. Both Edward and his brother were tremen-

dous workers and their vim and ambition set the pace in the big city and made everybody sit up and take notice. Their efforts have been crowned with great success and the unexpected demise of Edward leaves a gap in the flower business and in the hearts of his many friends that will be hard to fill. He was about 52 years of age and was born in Philadelphia.

INTERNATIONAL FLOWER SHOW.

Arrangements Practically Completed
for the Big Exhibit.

At this time, three weeks before the opening of the International Flower Show in the Grand Central Palace, New York, all arrangements are practically completed.

The arrangement of the exhibition will show some differences in comparison with the lay-out of previous shows, but they will be to the advantage of the general display. The rose garden feature promises to be on a larger scale than ever, and the big cut rose display is this year to be doubled. The American Rose Society is taking much interest in the rose displays, which will include the society's annual exhibition, and its officers have secured several special prizes for rose exhibits. Rock gardens and border plantings will be featured lavishly, and the bulb garden display is expected this year to excel any attempt heretofore made in this direction.

The trade exhibits bid fair to exceed in number, space occupied, and general interest all previous showings at any similar exhibition. An especial feature in the assemblage of exhibits will be some devoted to the display of garden tractors. In these days of labor shortage tractors adapted to garden use will undoubtedly be objects of interests to all whose garden operations are conducted on a liberal scale. Many will miss the handsome display of garden pottery, statuary and furniture which has characterized other exhibitions, but the committee has been unable to secure the feature at this show. Also, probably will be missed the usual extensive exhibit of rustic furniture for gardens and parks exhibit which has always appealed to the public, whose ideas generally connect summer houses and benches with the gardens of their dreams. Seventy-four trade exhibits have had space reserved for them, and this number will very likely be increased, but only to the extent of space available. It will seem rather strange that the list of exhibitors does not include any house able to stage an exhibit of garden tools, that is, spades, forks, garden baskets, shears, flower cutters, trowels, markers and the hun-

dred and one things adapted to the use of gardeners of both sexes.

Among the exhibitors in the trade section not already mentioned in the trade papers are: Stumpp & Walter Co., New York; L. J. Reuter Co., Boston, Mass.; Niagara Sprayer Co., Middleport, N. Y.; W. F. Kasting Co., Buffalo, N. Y.; McCallum Co., Pittsburgh, Pa.; Woman's National Farm and Garden Association; National Farm Equipment Co., New York.

The Tea Garden this year will be managed by the Allied Loyalty League, and the ladies who were instrumental

in making this feature of the show such a success in past years will again be in charge of it. The garden will be located on the second floor, in much about the same position as formerly.

The general price of admission will be \$1.00, a price necessitated by the increased expense attaching to the show. Trade tickets will be furnished as usual, but the price this year is 40c. each, in lots of 100 or more, 50c. each in lots of less than 100, with the privilege of redemption for unused tickets.

JOHN YOUNG, Secy.

1170 Broadway, New York.

RAMBLING OBSERVATIONS OF A ROVING GARDENER

Perhaps enough attention has already been given to the rose Columbia, but in Horticulture it has been treated mostly from the standpoint of the commercial grower. Indeed, it is most commonly looked upon as a greenhouse rose. I am interested, for that reason, to find that in the Henry A. Dreer catalogue it is being featured as a garden plant. The statement is made, in fact, that Columbia has proven itself one of the best bedding or garden varieties. Mention is made of its strong, vigorous growth and its free flowering habit, as well as of its pleasing color and sweet perfume. I wish

I knew for certain that it was entirely hardy in New England, for I expect that question to be asked by many people. With the new honors won by Columbia in the competition at Portland, Ore., it is likely to be in great demand. I already feel that I shall have to grow it the coming season, as a matter of duty, if for no other reason, for I must needs learn more about its garden qualities. Curious, by the way, how easy we find it to make a duty of things we like to do.

I do not suppose that there is anybody in the Dreer establishment who poses as a prophet, but it seems as though somebody on the staff must

have had a hunch that Columbia was to loom big in the eyes of rosarians, for the new catalogue comes out with a wonderful full page picture of this rose in colors, one of the handsomest things I have seen in this season's catalogues. It would sell the rose even without a description.

I believe that Charles H. Totty is also presenting an excellent plate of this rose, along with many other colored illustrations. Mr. Totty gives some space to the loss occasioned here by Quarantine 37 in the shutting out of the beautiful Irish roses which formerly were imported. Mr. Totty was American agent for the Dicksons of Belfast, and had introduced some splendid varieties from that source. It is to be hoped that a stock has been accumulated of such fine singles as Ulster Gem and Ulster Volunteer. People seem to be growing more fond of the single roses, which is a good

Silver Moon which Mr. Fish says is Entirely Hardy in New England

indication. It is possible to develop them from native sources, too.

ROSES THAT ARE HARDY.

Dear Sir:—

The question as to the hardness of the climbing rose Silver Moon has been raised. My experience with it has been perfectly satisfactory in every way.

Harking back to the hard winter of 1917-18 this rose went through better than some of hardy H. P. roses. All of my F. K. Druschki's were killed, both bush and tree form. In fact all of the standard or tree roses were killed except Tausendschon and Silver Moon. Both of these varieties bloomed the following June.

I have had good reports from Indiana, Ohio, Michigan, New York and Maine. The whole trouble seems to hinge on the first winter. If protected then it will take care of itself after, when well established.

We are having one of the old fashioned winters this year, but I don't think there will be many losses in this section even, if the temperature has been down to 12 below here, as we have two feet of snow here to protect the bushes, while the other hard winter there was absolutely no snow and the thermometer went to 18 below. Also the past summer was a perfect rose season, no drought at all, and just enough rain all the time to keep them growing and ripening all the way along.

Yours truly,

A. J. FISH.

NEWS NOTES.

The following are new members of the Indiana State Florists' Association: Thos. Affleck, Indianapolis; Norman and Fred Hukreide, Indianapolis; Frank D. McConnell, Booneville; William Julius, Jeffersonville; Adam Scheidler, Muncie; Clarence K. Hirth, Indianapolis.

Norman S. Chamberlain, of Howell, Michigan, has carried out a unique plan. Needing water for his four greenhouses he has put up a windmill which is the exact reproduction of the picturesque windmills of Holland.

Serious damage was done at the establishment of Carl Jurgens at Newport, R. I., during the recent storm, when the heavy snowfall broke down a large rose house in which were many dormant roses that were badly crushed.

Donald Fogg, formerly a florist at Portland, Me., died recently at Rutland, Mass.

HARD TO ANSWER

Important Questions Put to Horticultural Board by W. A. Manda.

Mr. W. A. Manda of South Orange, N. J., is making a vigorous effort to have the quarantine on orchids modified. He recently sent a carefully prepared communication to the Federal Horticultural Board at Washington which embodied some very stiff questions. In part this communication was as follows:

Gentlemen:

I hereby enter a protest against the exclusion of importation of orchids and trust that your honorable body will take the following into consideration and so modify and arrange Quarantine No. 37 so that we could import orchids from their native habitat which furnishes us what may be called the raw material, fundamentally necessary for orchid culture in America.

Orchids in cultivation have only the following enemies:

1—Cattleya Fly which attacks only few and not all of the species of Cattleya and does not attack any other orchids and never other plants.

2—Other insects like spider, thrips, green fly, scales, mealy-bug, snail, cockroaches are common to all greenhouse plants and is due to lack of cleanliness and proper ventilation and occurs out of doors just as well in the summer months due to unusual climatic conditions, neither being dangerous to vegetation and easily eradicated. Orchids have only one disease that of Black Spot due to too much moisture in cultivation and this does not exist, only in native state nor does it spread to other plants.

Questions.

1—Has there to the knowledge of this honorable board ever been a dangerous insect or disease imported with orchids?

2—Are there any insects or diseases peculiar to orchids that would feed or establish on other plants especially those used in agriculture?

3—How are orchids more dangerous than banana, timber and such without any inspection whatsoever?

4—How is this board going to guard the Frontiers of the United States along either the Mexican or Canadian borders from spread of insects or diseases if such should exist in these adjoining countries?

5—Are not birds, animals, heavy rainstorms, hurricane winds over which this board cannot assume any control, more liable to bring insects and diseases into the United States than could be ever done by the most

gigantic importation of orchids and in fact all other plants combined.

My reasons for asking this change in Quarantine No. 37 are as follows:

1—Orchids are considered by everyone the super flower.

2—This exclusion would retard horticulture at least a century.

3—It would deprive the amateur from cultivating and enjoying nature's most beautiful and wonderful flower.

4—It would be a hardship and loss of business and money to the man interested in same commercially.

5—There is no plant used agriculturally that belongs to the orchid family hence impossible contamination especially as none exists in orchids.

6—Orchids cannot be practically and successfully propagated in cultivation.

7—For if the stock could be only doubled yearly the quantity imported into England would be sufficient not only early to fill every green house but every field in Great Britain.

8—If quarantine is not removed the stock of orchids will gradually be reduced and United States will depend on Canada, Mexico or Cuba for cut orchids.

9—The admission of orchids will not endanger or nullify the efforts of the horticultural board in safe guarding either agricultural or horticultural interests at large.

I trust that your honorable body will take the above under due consideration, act and decide accordingly.

Respectfully yours,

W. A. MANDA.

FEBRUARY.

Icicles, a foot and more long, hang from the eaves of the buildings. A dull sky wraps the scene in one monotony of gray. When suddenly there is a shift in the wind, the sun breaks up these sombre hues, the sky is a study of lovely shades of gray and gold.

The clouds pass away at noon, the sky is all one clear and brilliant blue, giving the long shadows of the trees in exquisite blues and purples on the snow. Reflected back from the white snow is the golden radiance of the western sun.

Every month has its special charm, and almost every month has its appropriate holiday. Thanksgiving Day, after the harvests have been gathered; Christmas, the midwinter feast of yule log and holly, dating back far beyond our Christian era. With February spring has not come, but there is the promise of it in these long lights and shadows, one feels that the sap will soon begin to start, and the feast of Saint Valentine is here.

THE BOILER OF Unequalled Fuel Economy

Kroeschell Boilers, the best by test since 1870. Forty years' experience.

THE QUALITY PLACE OF BOSTON

Regarding the Kroeschell, it is the best we have ever had and satisfactory beyond our expectations. It heats up especially quick and has saved us considerably already in the price of fuel. When we are in need of another boiler we will give the Kroeschell the first consideration.

(Signed) WM. W. EDGAR CO.,
WAVERLEY, MASS.

No Masonry—No Tubes

TUBELESS BOILER

When You Buy—Get a Kroeschell

2,016,286 sq. ft. of glass was equipped with Kroeschell Boilers during the year of 1918.

OHIO'S CELEBRATED CYCLAMEN SPECIALIST

After using your No. 12 Kroeschell Boiler I came to the conclusion that had I to install more boilers it would be the Kroeschell and no other. It really is a pleasure to heat, no trouble to get the desired heat in a very short time.

(Signed) CHRIST. WINTERICH,
DEFIANCE, OHIO.

CHICAGO

NEW DAHLIAS.

Those Which Showed Promise in the Trial Gardens at Storrs.

Now that dahlia lovers are selecting the varieties that are to become a part of next season's gardens, a few words of comment on the newer dahlias suited for garden or exhibition purposes may be timely. The varieties described in the following notes are those that showed promise in the trial gardens of the American Dahlia Society, conducted last year at the Connecticut Agricultural College at Storrs. In this list I have mentioned only those that are on the market; or are likely to be soon. There were several other splendid varieties that received the certificate of merit that were entered by amateurs, and private growers, some under number, so I doubt if they will be on the market this season. All the varieties are free flowering, and were grown without disbudding so should make large flowers if disbudded for exhibition purposes. Those marked with a * received the Society's Certificate of Merit.

*Geo. L. Mastick (M. G. Tyler, Portland, Oregon). A large crimson-purple duplex, that is very attractive and shows up well in the garden. (5 ft.)

*Amy Robsart (Tyler) Peony. Immense flower of orange-scarlet color suffused with red, on good stems; worthy of a place in any garden, or for exhibition. (5-6 ft.)

Fantastique (Tyler). A very odd and attractive variety; the color is a deep maroon with white edges and tips; the petals twist in a tortuous fashion. A very remarkable variety. (6 ft.)

*Quentin Durward (Tyler). Peony. Bicolor crimson-yellow, another large flower suitable for garden or exhibition purposes. (5 ft.)

Frans Ludwig (K. Van Bourgondien, Babylon, L. I., N. Y.). Decorative—a fine medium-sized flower of lavender pink color, that will make a fine addition to the garden for bedding, or cut flower. It is dwarf and a continuous bloomer. (2½ ft.)

*Esther Lynn (C. C. Morse Co., San Francisco, Cal.). Decorative. A fine variety of a very pleasing burnt orange color, on long stems, good for cutting, garden, or exhibition. (5 ft.)

*Splendid (Nathan Miller, Brandford, Conn.). Cactus Hybrid, a pure white variety that everybody admires. Fine for garden and exhibition. (4 ft.)

*Lavender Pink, now named Mrs. Carl Salback (Carl Salback, Oakland, Cal.). Decorative. A large flower on long stiff stems of a pleasing shade of lavender pink; this variety will make a name for itself wherever shown. (4-5 ft.)

*Lady Helen (G. L. Stillman, Westerly, Rhode Island). Cactus Hybrid. This is another large flower the color of which is a deep pink with cream tips, on long stems. Should make a good garden, or exhibition variety. (5-6 ft.)

*King of Shows (Stillman). A very free flowering, show variety, of a deep butter yellow. Its long stems make it fine for cut flower as well as for exhibition purposes. (4-5 ft.)

*Perfect Beauty (Stillman). Decorative. Here is a variety that will please those that like to have something odd and novel in their gardens. The red petals tipped with white make a very striking plant. (4 ft.)

*Aquitania (Stillman). This cactus hybrid, will make a fine addition to the collection. It has immense flowers of deep salmon pink, on long stems. (5-6 ft.)

*Catherine Wilcox (Stillman). This is a dwarf decorative variety that ought to make good for cut flower as well as for the garden, and exhibition. Color, white with lavender shading. (2-3 ft.)

*George E. Alling (C. Louis Alling, West Haven, Conn.). If you want a good, clear, lemon yellow peony, for cutting, this variety will please you. The color is all that could be desired, and it flowers freely. (4-5 ft.)

*Margaret Douglas (A. W. Davison, Ansonia, Conn.). Decorative. This variety resembles "Esther Lynn," but the color is a deeper shade of burnt orange. Very free flowering, and good stem. (4-5 ft.)

FERNS

THE VICTORY FERN (Nephrolepis victoria)

We take pleasure in offering this new and valuable variety of Nephrolepis. It is a beautifully crested form of "Teddy, Jr." with fronds frequently subdivided on the ends, making a most unique, distinct, and desirable variety.

This fern was

AWARDED A BRONZE MEDAL

at the S. A. F. Convention at Detroit in August, 1919. The judges of the award reported as follows: "Special stress is laid on the new fern Victory, with a rapid growth and a branching at end of fronds, making it a shapely plant. It should be a commercial success, and we **RECOMMEND IT MOST HIGHLY.**"

Strong plants, 2½-inch pots, \$3.00 per dozen, \$20.00 per 100
Strong plants, 3½-inch pots, 7.50 per dozen, 50.00 per 100
Extra fine specimens: 8-inch, \$3.00; 10-inch, \$5.00; 12-inch, \$7.50.

NATIONAL PUBLICITY CAMPAIGN

Letters such as the following are gratefully appreciated by our Publicity Committee:

Bloomington, Ill.,
February 17, 1920.

Mr. John Young, Secretary.

Dear Sir:

Your statement for \$50 to cover our 1920 pledge to the Publicity Fund is at hand. We are making our cheque \$100, both because we think it is a good investment and is an expression of our appreciation of the work the Committee is doing for the good of the cause. The greatest good will come in a year or two, or three from now, when production more nearly catches up with the demand.

A. WASHBURN & SONS."

A few carping critics have seen fit to question the wisdom of launching our Campaign at the time we did. Results have proved that such launching was the greatest and most beneficial move ever made in the history of the florists' trade. To imagine that a continuance of the Campaign because of an apparent shortage of flowers is an unwise step is wrong. What has caused the shortage, if not demand? There are as many growing establishments as ever, and, as far as is known, practically everyone is going at full tilt. At any rate there are no more idle than is always the case. Has any particular glut been recorded since the Campaign started? Was not every market bothered with periodical gluts before we became active with our publicity movement? The Washburns are right. The greatest good will come later on. Demand will not be allowed to exceed supply for long. Production is already increasing, and, naturally, will continue to increase. We must expect it, and we must prepare for it.

In spite of increased labor cost, and advanced cost of materials, have growers ever enjoyed as good returns for their products as they have of late? Yet the growers as a class have not supported our Campaign to the extent expected of them. They evidently have not given our movement the serious thought it surely deserves. They have been content to profit through the better movement of their products brought about by the Campaign, without contributing to the expense of the work. Surely the subscriptions from growers should be on

a par with those from other sections of the trade.

The Campaign can be active only so long as those who are to benefit will share in the expense. Subscriptions certainly are not coming in as they should, and it is rather unfair that those who last year so generously pledged themselves to meet a goodly portion of the Campaign expense this year should be allowed to finance the movement within a limit necessarily determined by the fund available. With the great number of florists to share in the benefits it should not be difficult to carry the funds to the amount required by the Committee, \$100,000. Is this such a very great sum to raise among 20,000 members of the trade? Assure yourself, Mr. Nonsubscriber that it is not, and send in your cheque for the amount you think right for you to subscribe—or had one not better say invest.

JOHN YOUNG, Secy.

COMMITTEE ON TARIFF AND LEGISLATION.

William F. Gude, chairman of the Committee on Tariff and Legislation, has called a meeting of the Committee to be held at the administration Offices, 1170 Broadway, New York, on Wednesday, March 17th, at 2 P. M. The matter of future action of the Society in regard to Quarantine Order No. 37 will have consideration at this meeting.

JOHN YOUNG, Secy.

NATIONAL FLOWER SHOW COMMITTEE.

Chairman George Asmus of the National Flower Show Committee has called a meeting of this committee to be held at the Administration offices 1170 Broadway, New York, on Tuesday March 16th, at 3 P. M. As the business of this meeting is important, a full attendance of the Committee is expected.

JOHN YOUNG, Secy.

1170 Broadway, New York.

ATTENTION !!

Members of the S. A. F. & O. H. and Affiliated Societies:

Are you going to attend the 7th International Flower Show, to be held March 15th to 21st inclusive, Grand Central Palace, New York City? If so, during your stay, make the S. A. F. & O. H. Booth your Headquarters.

A. L. MILLER, President,
S. A. F. & O. H.

CHRYSANTHEMUMS

All Stock Propagated from Plants Absolutely Free from Midge or Any Other Disease

CHOICE COMMERCIAL VARIETIES.

Rooted cuttings of list below \$5 per 100; \$40 per 1000.

BARBARA DAVIS. Rich shade of reddish bronze and entirely distinct from any other variety. Has proved a decided acquisition either as a cut flower or as a pot plant. In habit of growth it is short-jointed and inclined to be dwarf, but makes good stems from early propagation. The flower is reflexed when fully open and is at its best just before maturing.

C. H. TOTTY. Chestnut scarlet; flower large and growth strong.

CHADWICK SUPREME. Color similar to Pacific Supreme; reflexed bloom. A sport of W. H. Chadwick. In bloom from November 20th to December 1st.

GOLDEN CHADWICK. When high-class blooms are the object, this variety reigns supreme. Its rich yellow color, combined with the good characteristics of the Chadwicks, places it as one of the best late yellow varieties.

GOLDEN MISTLETOE. Sport of Mistletoe. The parent is our latest flowering variety, coming well into December. It is ball-shaped. An excellent companion for the parent.

INDIAN SUMMER. The groundwork is yellow, but into this are blended terra-cotta and salmon shades, with a tinge of bronze. The color of autumn foliage during Indian summer in a measure describes the coloring. It is a sport of Golden Chadwick.

WELLS' LATE PINK. Clear, bright pink in color.

W. H. CHADWICK. For the markets that want select stock, this variety stands alone. Slightly pinkish when grown cool, it is even more charming than when pure white.

WILLIAM TURNER. Pure white bloom, incurved and very large. One of the finest of the large-flowered Chrysanthemums and a general favorite. This variety is grown commercially and we have a large stock prepared for the cut flower grower.

YELLOW WILLIAM TURNER. The yellow sport sent out by Smith is the variety we offer. It is an excellent variety and will rank as one of the finest for exhibition use.

STANDARD COMMERCIAL VARIETIES.

Rooted cuttings of all in the following list
\$3.50 per 100; \$30 per 1000.

WHITE.

EARLY. Early Frost, Oconto, Smith's Advance, Polly Rose, Chrystal Gem.

MIDSEASON. Charles Razer, Smith's Imperial, White Chieftain.

LATE. Lynnwood Hall, Timothy Eaton, December Gem, Hamburg Late White, Mistletoe, White Seidewitz, White Bonaffon.

YELLOW.

EARLY. Golden Glow, Chrysolora, Golden Queen, Marigold, Tints of Gold, Yellow Polly Rose, Robert Halliday.

MIDSEASON. Colonel Appleton, Golden Gleam, Mrs. C. C. Pollworth, Mrs. M. R. Morgan, Richmond (watch this variety, called an early Bonaffon, perfect form and color and every commercial man should try it), Tiger, Yellow Razer.

LATE. Major Bonaffon, Yellow Eaton, Golden Eagle, W. H. Lincoln.

PINK.

EARLY. Early Rose, Glory of Pacific, Mrs. W. T. McNeice, Pacific Supreme, Unaka.

MIDSEASON. Chieftain.

LATE. Dr. Enguehard, Edwin Seidewitz, Maud Dean, Wells' Late Pink.

BRONZE.

MIDSEASON AND LATE VARIETIES. Greystone, Miss Elizabeth Smith, October Herald.

RED.

HARVARD. (Best late commercial red.)

Where packing charges are made against us we will add them at cost.

GENERAL NEWS NOTES.

At the recent meeting of the Illinois State Nurserymen's Association the following officers were elected: President, A. M. Augustine, Normal; vice-president, George Klehm, Arlington Heights; treasurer, Clyde Leesley, Chicago. The executive committee elected J. A. Young of Aurora as secretary.

Albert Kohler of the American Bulb Co., Chicago, has sailed for Holland to purchase bulbs and other supplies. While away he will visit France, Italy and England.

The florist business of Max Smith of Portland, Oregon, has been sold to Thomas Luke, who had been associated with Mr. Smith for many years.

A new florist's store has been opened at the corner of Laurier Ave. W. and Bank St., Toronto by Ben Everest. Before going over seas he had a business in Ottawa.

The establishment of Edward Kress, near Baltimore, including six greenhouses, has been sold to Peter Fika. Mr. Fika takes possession about the first of March.

A. G. Pruisser, of the National Bulb Co., Benton Harbor, Mich., is making a business trip to Holland and France.

James L. Smith, of Toronto, has been appointed secretary and treasurer of the Smith's Falls Horticultural Association. Mr. Smith is a well known florist.

E. C. Amling, of Chicago, Ill., is at the head of a new company with a capital of \$50,000.00 which will do a general commission business in Los Angeles. This will supplement Mr. Amling's big wholesale flower business in Chicago, where he has been well known for the past thirty years. It is understood that he will erect greenhouses at Sautelle.

Charles A. Schaeffer the florist, 110 East Market street, York, Pa., has purchased the property, 124 West Market street, from the Dispatch Publishing company. The building will be remodelled and the flower store removed from the present address into the new building.

According to a newspaper dispatch a musical instrument dealer in an Oregon city during a recent rose carnival had a window display which required 16,000 pink roses, which completely covered a grand piano and a piano bench. At the instrument in the midst of the floral profusion was seated a wax figure, representing a child playing.

Richard Gardiner, of Newport, R. I., has given up his greenhouses and they are being torn down so that the land may be used for building purposes.

The Englewood Nursery Co., of Leonia, N. J., is a new corporation. Thos. H. Heminsley, formerly of the Meadowbrook Nursery, is president and general manager. It is said that the nursery will be laid out in such a way as to demonstrate the proper use of shrubs and trees in general planting.

C. R. Felton, of Buffalo, has completed the remodeling of one of his stores, making it a very attractive establishment.

The Florists' Retail Association, of Buffalo, has elected the following officers: President, W. H. Greiver; secretary-treasurer, E. Stroh; board of directors, W. J. Palmer, S. A. Anderson, R. Scott, W. Smith, C. R. Felton, J. Kramer and Peter Hoffman.

It is understood that F. K. Prouse, of Brampton, Ont., is to engage in the wholesale florists' supply business, with headquarters in Brampton, but with a salesroom in Toronto.

R. H. Wilson, of Brooklyn, has acquired the flower shop in Hahne & Co.'s department store at Newark, N. J. This does not mean, though, that he will give up his two Brooklyn stores.

No. 9

THE TALK OF THE TRADE

It seems to me that a plan which is being tried out in Canada might well be adopted by different florists' clubs in the states. The florists' organizations in Hamilton and Toronto have made an exchange arrangement by which members from each club visit the other club and give short talks on practical matters. At the last meeting of the Toronto Wholesale Florists' Club, for example, Edward Gale of Hamilton, was present and showed his method of making a wreath, all the work being done, from the mossing to the completing of the design. Mr. Gale used roses, sweet peas, freesias and violets, and showed remarkable skill in wiring the flowers and making up the piece. There is much that can be learned by demonstrations of this sort, and I think it would help to increase the attendance at club meetings if a program to include such demonstrations could be announced ahead.

It seems to me too, that many of the seed houses could save considerable money if they would go over their mailing lists and eliminate duplication. As it is now, many people receive two and sometimes three or four catalogues from the same firm. With catalogues at the present price, this is an expensive waste. Moreover, the impression made upon the recipients of the catalogues is not of the best, for the impression is created that the firm is not very businesslike. Often the mistake occurs because of slightly different initials, but few lists are so extensive that they could not be revised so as to avoid much wastage.

It will be interesting to follow the market for Easter Lilies this year. At the present time there seems to be in sight between 125,000 and 150,000 lilies for the Boston market, and the normal supply for this market has previously been close to 500,000; in other words, we have roughly speaking about one-third the supply of previous years. How this average holds for other markets I am unable to say, but will venture to predict that it is not much

different. Now the price of lilies this year will go about three times higher than during normal years. Instead of being around 12c. it will be nearer 35c. The probabilities are that all good stock will sell at wholesale at 35c. per flower or bud; some short stock and the bulk of inferior grades will of course go lower. It is expected that the demand will be sufficient to clean up everything offered at this price.

Pot roses for Easter are showing up in fine shape, the supply will be fair and of excellent quality, and this applies also to Hydrangeas. From all indications now, the storeman will have a very complete line of pot plants of A1 quality and at prices that will permit him to clean everything out that is in sight.

George H. Peterson of Fairlawn, N. J., a noted rose specialist is reported to have purchased a property at St. Petersburg, Fla., and will probably be heard from by and by with things of rosy interest from that earthly winter paradise—where northern denizens of Uncle Sam's domains hope to spend their days of leisure—when the rush of money making has ceased and the morning dews and rosy fingers of the fairies set them to dreaming of the sunkist sunny south.

All indications are that there will be another short crop of geraniums this spring, and it is too bad that this is the case but so many things have combined to cut down the supply that we are sure to fall very short of the demand. The heavy rains and severe weather last fall made it impossible for the geranium propagator to get anywhere near a normal strike. The stock was short to begin with, and the only way I can see out of the matter is for geranium growers to forget the high prices that he can get for plants this spring, and hold back enough so that he can propagate heavier the coming season. At the price that geranium stock will bring now, ranging anywhere from 25c. to 35c. retail, there is a satisfactory margin in this crop. Look out for a good supply of stock plants of Poitevine, Ricard and Nutt in particular.

There has been more or less said the past season regarding violets and why we don't have the same large quantities of blooms sent into the market. Something has gone wrong with the violet as a cut flower proposition. Even with the small quantity of stock coming in from the time the season opened up until just before Valentine Day, the price was low, altogether too low, for this to be a profitable crop. The grower cannot sell his violet blooms for \$1, \$1.50 or \$2.00 per 100 and make his salt, and if the market is going to stay around that figure the result will simply be fewer violets, and that means practically none if they are cut down very much from what is coming into the Boston market just now. Take, for instance, Mr. Sim, who for years has been one of the largest growers in the East. For the past few years he has gradually cut down, and he told me a few days ago that next year he would not grow one violet plant. Why? Simply because they are not a paying proposition.

I hope that the catalogue of the State Nursery and Seed Co. of Helena, Montana, goes to the office of Mr. Childs at Flowerfield, N. Y., for certainly Mr. Childs would be greatly gratified to find the front cover given over largely to a reproduction of Golden Glow, the plant which he put into popularity years ago.

It seems that Golden Glow has been made the official flower of the city of Helena, and that it is grown in tremendous quantities in that state. The picture which the State Nursery and Seed Co. are using is an excellent one, presenting a great mass of color with the face of a pretty little girl framed by the yellow blossoms.

It is seldom that a better lot of Cineraria are seen than has been offered in the various plant markets this season. From all sections we hear the same story, that the quality is excellent and it is also pleasing to note that they are bringing a good price. A few years ago the Cineraria crop was not anything to figure on the profit side of the ledger. Nice big plants in 6 and 7-inch pots were sold at wholesale at around 50c., sometimes even

CAROLINA HEMLOCK

(TSUGA CAROLINIANA)

THE MOST BEAUTIFUL AND RARE AMERICAN EVERGREEN

Specimens may be seen at Arnold Arboretum, where one may compare it with hundreds of other varieties of Evergreens.

SPECIAL: A limited number of Grand specimens, 16 to 20 feet high for immediate effect at my Highlands Nursery (3,700 ft. elevation in the Carolina Mountains). Prices on request.

A fine stock of smaller specimens from 1 foot up at my Boxford Nursery. Catalogs.

HARLAN P. KELSEY

Hardy American Plants

SALEM MASS.

less, but with well-grown plants going at \$1.00 to \$1.50 wholesale this year, this can be called one of the paying crops, and it is certainly a pleasing plant to handle.

The wide range of colors is an added attraction to the retail store, and when properly taken care of Cineraria is in general a satisfactory house plant. True it does not last indefinitely, but the buying public has learned that to buy a plant does not mean that it will last forever. A well-grown Cineraria will outlast a bouquet of cut flowers, and the same money invested in one of these will certainly give every bit as much pleasure.

The important points for the grower to bear in mind when marketing Cineraria plants are first, to grow them cool so that they will not be too soft, and second, sell them before all of the buds are opened. Have enough of the blooms developed to make them attractive, but be sure to have enough buds so that they will last for a while and give the retail buyer the pleasure of watching them develop.

Last but not least, be sure to keep them clear of green fly. Cineraria is a favorite food for the green fly. Frequent fumigation is necessary, but as satisfactory a way as any to keep down green fly is to have the pots standing on tobacco stems; then this trouble will be decidedly lessened.

Recently I heard several of my Western friends say that they did not take kindly to the Godfrey calla because the blooms were not large enough. This criticism is not made in the East. Possibly there are two reasons: I believe that the Eastern growers have succeeded in getting a good-sized bloom, and secondly, I don't think the market in the East is so particular about the very large flowers. Now if the Western markets want these large blooms, it will pay to try growing the Godfrey calla in the way Mr. Wheeler has done it. I will venture to predict that the pro-

duction will run ahead of the old-time calla which has been commonly grown for so many years past.

Mr. Carl Engelman, the famous English carnation grower, has returned home after a prolonged trip through South America and United States. He made an excellent impression upon members of the trade with whom he came in contact, and at the Chicago Carnation Convention showed his skill in arranging flowers. It is understood that he made a number of purchases while here. It is understood that Baur & Steinkamp, of Indianapolis, have already shipped a consignment of carnation cuttings to Mr. Engelman's establishment, at Saffron Walden and it is to be imagined that they include Ruth Baur. Mr. Engelman is also said to have taken along with him a considerable number of cuttings from another source, as a part of his personal baggage.

IMPORTANT CONSOLIDATION.

The B. A. Snyder Co. Goes in With the Boston Floral Supply Co.

The trade will be very much interested in the announcement just now going out of a consolidation of the Boston Floral Supply Co. and the B. A. Snyder Co. of Boston. The new arrangement goes into effect March 1st, at which time the store operated by the B. A. Snyder Co. will be closed. Hereafter all business will be transacted from the store of the Boston Floral Supply Co. on Arch street, with Albert Strump remaining in charge.

When Mr. Samuel Robinson, who is the head of the Boston Floral Supply Co., was asked about the new arrangement, he said it was made in order to reduce expenses and also to enable his concern to give the trade better service. Hereafter a much larger business in cut flowers will be done at the head-

quarters of the Boston Floral Supply Co. on Arch street. The members of the B. A. Snyder Co. had developed an extensive trade in cut flowers and of course this trade will go with the combined organization.

CORN BORER HEARING.

An Important Session Held at Washington, Tuesday.

A very largely attended and important hearing on the European corn borer situation was given by the Federal Horticultural Board at Washington last Tuesday. The Massachusetts delegation, the personnel of which was given in last week's HORTICULTURE headed by Commissioner Gilbert, met the night before with representatives of New Hampshire, New York and Pennsylvania, and agreed upon a program of action. The hearing was attended by a number of western people who had become alarmed at the spread of the borer, but after a general discussion everybody seemed of the unanimous opinion that the best way to handle the pest was to have the present local quarantines retained and to make careful inspection of all market gardens or other establishments from which suspected crops might be shipped. It is believed that this will be the decision of the Horticultural Board and that no general quarantine of states will be made. Apparently the florists will not suffer badly from the new arrangement. An emphasis is being placed on the statement that there really is no grounds for the fear which has arisen throughout the West.

A Card This Size

Cost only \$1.00 per Week
on Yearly Order

It would keep your name and your specialty before the whole trade.
A half-inch card costs only 45c. per week on yearly order.

ACACIAS.

The characters of the divers forms of acacias are well fixed and established. When they are raised from seeds they come as true to type and make as good and splendid specimens as when propagated by cuttings. Also less labor and care and attention is required in their multiplication when resorted to the natural means. When, therefore, seeds are obtainable, this mode of propagating them is always to be preferred. When they are ripe they should be sown in pans and kept in gentle heat till they germinate. Then they should be removed to a cooler place. When, however, they are to be propagated by cuttings, it should be done in the latter part of spring or early in the summer. The earlier in the month of June the better. The wood should be neither succulent nor too hard. Half ripened wood is the ideal and only kind to look for and to take for this purpose. They usually require a very long time to root, but no heat is necessary to aid them in this process. The only way to encourage them is to keep the propagating bench shaded and the cuttings cool and moist.

They should be potted in a compost of fibrous sandy loam soil, peat or leaf-mould, well rotted cow manure, and with some sand. They make all their growth only during the summer months and no labor should be spared to encourage them at this period. Their watering must be copious and thoroughly attended to and never allowed to suffer from want of water. Like ericas, they want and delight in plenty of it. It is also very desirable and of great benefit to them that they be syringed at least once a day. As they advance in growth they should be pinched or cut back in order that they branch and assume a more or less symmetrical shape. Although they may be plunged out during the summer months in the open, in a semi-shaded place, more satisfaction will be derived when young plants are kept indoors, provided the houses are well shaded and ventilated.

Old specimens, plants carried over from one season to another, should be cut back and immediately repotted after they have done flowering and kept under glass till they commence to break. About June they should be plunged out in the open and with the approach of cold weather taken in. After they are housed no attempt should ever be made to force them. Heat, after their completion of growth, is quite detrimental and hinders their full development. All the heat they need at this stage is to keep them

above freezing. It is only when they are grown cool that they are luxurious and healthy and develop into perfection. A temperature of 50 degrees throughout the winter months will splendidly usher them into their flowering season, which is always either in early or late spring, according to their nature.

There are several hundred described species in this genus, but the number adapted for pot culture and excellent for commercial purposes is rather limited. These briefly described below are some of the desirable ones.

A. armata—A very handsome shrub, usually 6 to 7 feet high, flowers dark or deep yellow and very fragrant, appearing early in March.

A. argyrophylla—A shrub rarely exceeding three feet, flowers nice yellow and abundant, in March or April.

A. Drummondii—This is the most elegant one of the genus, 3 to 4 feet, flowers lemon color, very freely produced, from March to June.

A. hispidissima—A very showy and attractive species, flowers deep yellow, in great profusion, in April.

A. longifolia—An excellent tall and erect shrub, very vigorous and free growing, flowers medium yellow, in March.

A. pubescens—Another tall but more or less pendant species, very floriferous, flowers bright yellow, in March.

A. verticillata—This is a spreading shrub, 4 to 5 feet high, flowers rich yellow, in April.

S. J. SHERMAN, B. S.

GOOD HEDGE PLANTS

In New England there are several evergreens which can be used to advantage in making hedges. The common hemlock, when in good condition, makes one of the most attractive com-

bination screen and wind breaks which can easily be found. An unusually fine example always attracts the attention of visitors to the Bayard Thayer estate of Lancaster, Mass., of which Mr. William Anderson is superintendent.

On the same estate there is a hedge of *Taxus cuspidata* which is a revelation to people who have never seen this splendid plant used in that way. This Yew is perfectly hardy and keeps its shape well for many years. It would be well if nurserymen would pay more attention to *Taxus cuspidata*, for it is one of the most useful plants that has ever been introduced, and should have a wide sale throughout the country. There are several forms at present, but the number could be increased indefinitely and to great advantage. Seedlings are sure to show wide variation and among them would be forms that might be employed in a great many ways. There is no difficulty in raising seedlings, although the seed germinates very slowly. It is to be hoped for the sake of the country's horticultural interests that nurserymen will give increased attention to *Taxus cuspidata*.

When Boards Disagree

There is one feature about the proposed quarantine regulations of the Federal Horticultural Board against New England and New York on account of the European corn-borer which should receive the attention of all dahlia and gladiolus growers. The Federal Board specifically designates dahlia and gladiolus bulbs meaning, of course, corms and tubers) as not subject to the embargo, because not capable of carrying the borer. Now there is very good reason to believe that with this point as an argument, the growers would have no difficulty in inducing Illinois to suspend its state quarantine so far as it relates to gladiolus corms and dahlia roots. Of course the Illinois board may feel that it must stick to its program to save its face, as it were, but on the whole we believe that it will defer to the supposed greater knowledge of the Federal Board. At any rate, these different boards ought to co-ordinate. If we can't get them to agree among themselves as to what are dangerous carriers and what are not, we certainly shall find ourselves in a parlous state.

Hard times

Fortunately coal is beginning to reach New England, although it has been badly delayed by repeated storms. In most instances it has come in time to save the florists from loss, although there are several big growers who could count the boards in the floors in their bins before the new supply arrived. A few florists have been obliged to close down their houses, or at least a part of their range. It is rather curious to find two simultaneous reports coming in from New Bedford, one to the effect that William P. Peirce had been

obliged to close up his greenhouses on account of the coal situation and that Edward Davis, of the same place had closed up because he couldn't get help. The coal shortages come spasmodically, as it were, but the labor shortage we apparently have always with us. This is getting to be one of the most serious phases of the business, and many an employer has found himself doing work this season which in the past had been delegated to a laborer.

During the season of big storms florists have also been sadly handicapped by difficulty in making deliveries. Even in the case of funeral orders it has been almost impossible many times to get the goods through at the hour specified. In some instances railroad delays have proved pretty expensive, as in the case of large quantities of Valentine violets shipped to New York, but held up by storms. Altogether florists have been having a decidedly uncomfortable month, for along with the difficulties mentioned have come storms of such severity as to break down houses and ruin valuable crops. It is safe to say that the present winter and especially February of this year 1920, will long be remembered by florists the country over. Certainly it has been "hard times"—in one sense of the word.

Free seeds and quarantines We have laughed at Uncle Sam and his free seed idea for a quarter century but the laugh has been mostly on account of the way it was done. The

idea behind the thing originally was a good one. That idea, fundamentally, was to increase a love of horticulture among the people located far from civilized centers. When the law was first passed there was little in the way of mail order seed trade, and folks living in the far corners had little chance of getting seeds to make a garden so they never thought of making one. Of course, when the mail order seed houses took the matter up the necessity for Uncle Sam's efforts ceased, and the custom should have been abolished—instead of being turned into a vote getting graft for congressmen. But compared with the quarantines, it is not worth mentioning. If it doesn't help any now, at least it does no harm—which quarantines do.

Now in regard to quarantines, Kirby M. White, of D. M. Ferry & Co., hit the nail on the head when he said:

"Garden seeds do not carry weeds. No state law can control interstate commerce in seeds as to truthness or reliability. State laws, as heretofore enacted, have held considerable power for harm but little or no power for good."

That is perfectly true. The idea back of all this legislation is to hinder. Thou shalt not do this. Thou shalt not do that. But never a single effort to *help in any way*, in an industry, deep and intricate, the finer points of which are not indicated on the surface. Mr. White says further:

"The value of breeding is ignored. The time will come when the public in regard to seeds will have to follow the lead of those in animal husbandry in realizing that breeding is the one hope of horticulture. All lesser desiderata must be subordinated to breeding, certainly nothing must be allowed to observe its right."

If our legislators, state and national, would give thought to this idea—of helping the seedsmen to breed better, and still better seeds—they would earn the plaudits of mankind. Let them forget a little about 100 per cent. growth and 100 per cent. purity. Let them remember that a very choice, highly bred, strain—even if it only grows 50 per cent.—is incalculably more valuable than a poor strain that grows 100 per cent.

Let everybody turn in, and let the universal slogan be—**Help Horticulture. Instead of Repressive Quarantines—extend the Helping Hand!**

—Geo. W. Watson.

RAMBLING OBSERVATIONS OF A ROVING GARDENER

At recent exhibitions in Boston visitors have been greatly interested in a remarkable new strawberry exhibited in bottles by Mr. Lewis Graton, of Whitman, a strawberry grower of long experience. It is with pleasure that I learn of Mr. Graton's intention to put this strawberry on the market this season, for it seems to me that it has great possibilities. Mr. Graton himself is not an extensive commercial grower, but has spent many years in perfecting this particular variety, hoping to make it the finest strawberry on the market.

The absolutely perfect strawberry still eludes us, and doubtless always will, because of the variety of our tastes and requirements. One person may prefer a sweet berry, and will deem such a berry as approximating to his standard of perfection. Another will think that this sweet berry of the other's preference, lacks the essentials of aroma and flavor that mean perfection to him. If one is a commercial grower and desires to broaden his market, his ideal is a berry that will stand long transportation without deterioration.

Since the introduction of the so-called everbearing strawberries, some tell us that the perfect strawberry must be everbearing. I believe this is asking too much. We don't expect a Baldwin or a Northern Spy to be at their best in August or September. Neither do we expect a Yellow Transparent to last all winter. Strawberries, like humans, have their limitations. Some men charm us with exalted poetry. Some sweep the heavens to discover new constellations. Some delve in the ever-cooling strata of our old earth to read at first hand the history of our globe; but the great majority of us have to be content with humbler tasks.

"Some, and I am one of these," said Mr. Graton to me recently, "have looked for a strawberry that would possess as many as possible of the best qualities of the very best, and as few as possible of the undesirable qualities of the others. For a good many years I have sought the perfect strawberry, and latterly I have done a good deal of experimenting to reach this goal. And I hope I may be pardoned for stating that I have been more successful than I had dared to hope.

"My ideal of a strawberry is of one

possessing a distinct and pervasive aroma, and that unmistakable flavor so often lacking in cultivated strawberries. It should have a rich, deep color clear through and be without green tips. It must have good size and it should hold its size to the last picking. It should be sufficiently firm to stand reasonably long transportation. It should make a goodly number of strong runners. And lastly the root system should be strong and deep to enable the plants to withstand the vicissitudes for dry seasons."

The St. Martin which Mr. Graton has developed from seed possesses these desirable qualities to an eminent degree. The large berries are a dark, rich red clear to the center, and are without green tips. The flavor is delicious, just the flavor looked for in a high class strawberry. Some persons have pronounced it even superior to the Marshall as to flavor.

Sixteen St. Martins have filled a quart basket, and it holds its large size to the last picking. Fourteen berries have heaped a pint basket at the twenty-fourth picking of the season. It is excellent for canning, and it retains its high qualities in the jar.

It has a perfect blossom, and it makes an abundance of long, strong runners. One plant set in April had fifty well rooted plants on November first of the same year.

While it is unsurpassed as a table berry, it is sufficiently firm to endure reasonably long transportation. Three or four years ago I sent some St. Martins to a friend at a distance of over

four hundred miles, and they reached their destination in good condition, notwithstanding the fact that they were fully ripe when forwarded.

This great strawberry was not developed by strictly scientific processes of pollenization, but is the result of a seed sown with some others at Trumansburg, N. Y., in 1909. The seeds were taken from well ripened, typical specimens of the following varieties: Brandywine, Ridgeway, Miller, Glen Mary, Commonwealth, and New York. The resultant seedlings were gradually cut down to the one that is now the St. Martin.

The original work on the St. Martin was done in New York state, but some years ago Mr. Graton moved to Massachusetts, bringing the plants with him. In 1919 it received the silver medal at the strawberry exhibition of the Massachusetts Horticultural Society. Mr. Graton had a somewhat sentimental reason for giving the berry the name which it bears, for St. Martin, near Montreal, is the town where as a bare footed boy he gathered the wild strawberries that grew in abundance in the dewy meadows.

Altogether eleven years have been required to bring the new berry to a point where it would be put on the market, and it seems to me that the faithful, conscientious application which Mr. Graton has given the task entitles him to the reward which he now seems likely to receive.

I understand that M. H. Walsh, the famous rose grower of Woods Hole, Mass., and originator of Excelsa, is a staunch opponent of the quarantine as it now stands and would like to see some concerted action taken to have it amended. By the way, Mr. Walsh has a son in Congress, and doubtless he would be willing to lend his aid.

**Flowers Under
Glass**

Keep constant watch of your young
rose plants so that they will not be-
come dried out at the bottom of the
pots. Sometimes the water runs
down the sides instead of saturating
the soil. It is worth while knocking
the plants out of a few pots occa-
sionally to see how the roots are
looking. If they are too dry, give
them a thorough drenching. Try to
keep the smaller plants to the front
where they will get the most sun.
If allowed to remain among the taller
specimens they will naturally grow
increasingly weaker.

If you want to keep Lilies-of-the-
Valley coming along steadily to use
for cut flowers, you should start a
fresh batch of pips once a week. It
will take about three weeks at this
season to bring them into flower.
Valleys for Easter should be started
very quickly now, being carried along
in a fairly cool house. Figure for
about four weeks at a temperature of
55 to 60 degrees. When the buds
have appeared keep your house cool
at all times in order to harden them
up. Never make the mistake of
wetting the buds. They must be
kept dry.

Violets may be propagated any time
from now until the first of April, but
it is most important not to take
cuttings from plants which have the
least sign of spot. Be very careful
that the cuttings do not wilt, either
before or after they are inserted in
the sand. They like a cool house
with a temperature not above 48 de-
grees. They may be rooted either on
benches or in well drained boxes of
sand. It is something of an art to
regulate the amount of water. They
should not have too much nor become
too dry. Frequent sprinklings given
by an experienced man will keep
them thriving, but they should always
have an opportunity to dry off before
night comes on. Violets like an
abundance of air, of course, and on

very bright days some shade will be needed.

Don't be in a hurry to plant Sweet Alyssum seed for Memorial Day. If the seed goes into the flats between the 15th of March and the 1st of April, there will be plenty of time. When the plants are large enough to handle, get them into other flats, setting them two inches apart each way, and afterwards shift to 2½-inch pots if you want to handle them in pots.

This is a good time to think about buying seedlings or potted stock of Asparagus plumosus in order to have a supply for the Easter trade. Get the little plants into 2½-inch pots as soon as convenient, and carry them along in the house between 50 and 55 at night. This decorative material is always in demand and it pays the florist to have a supply.

Geraniums must be hurried along a little perhaps for the Easter season. There will be a big demand for geraniums this year and they should sell at good prices. Remember that they need a heavy soil and that firm potting will help to make them flower early. Light soil is one reason why they fail to bloom freely. Give the geraniums all the sun possible and keep them in small pots. They will sell readily in 3½-inch-pots if having a good bloom at Easter. There is every reason to believe that baskets will be used as freely at Easter time as they were on Christmas, and these little geraniums are excellent for basket purposes.

PENNSYLVANIA FLORIST INJURED

After drawing a lot of hot cinders from under the boiler, Mr. T. J. Opperman, a florist at Washington Heights, Harrisburg, Pa., poured cold water on them. An enormous amount of gas was immediately formed overcoming Mr. Opperman. He fell, breaking an arm, but revived sufficiently to crawl out of the boiler pit, collapsing in the potting shed, where his employees found him.

He was soon revived and removed to his home close by. He is over the effects of the gas and the arm is doing as well as can be expected of it.

OYSTER ROAST FOR WASHINGTON FLORISTS.

The Washington Florists' Club is starting the new club year with an old time oyster roast. During the war the florists of the National Capital refrained from their usual gaieties and adopted a resolution postponing all of their big entertainments. It was recently discovered that there was a tidy little fund available for a real entertainment and J. Harper Hetherington, manager of the Washington Floral Company, was selected to make arrangements for an oyster roast to be given in the greenhouses of that company. The florists selected Feb. 28 for the event.

"We believe in 'Say It with Flowers' as we do in our evening prayer," says Mr. Hetherington's announcement of the event. "The Flower Week recently held here will be the chief topic of discussion. We will discuss our future activities along that line. I think we had a very successful campaign. We let the people see that the florists of Washington were on the job."

GOOD GARDENERS SCARCE.

J. F. Meehan Talks About the Matter at Pennsylvania Horticultural Society Meeting.

The third lecture of the present winter's course was given at the New Century Club, Philadelphia, on Tuesday last, Feb. 17th. The attendance was very good. Mr. J. Franklin Meehan was the lecturer, his subject being, "Landscape Work, with Special Reference to the Suburban Garden."

Mr. Meehan gave a very good lecture, imparting much valuable information to those present. He divided his subject into three parts. First, Conception, Conceiving and Planting, work to be done. Second, Executive, or carrying out the plans. Third, Maintenance. The lecturer dwelt at great length on this third part of his subject, and said, "Where are the men to come from in the future, who can take care of the work done by the landscape gardener, after he is through with the operation." He stated that the gardener of the old school was fast disappearing and that there were no new men coming along to take his place. By the gardener of the old school, he meant the man in charge of the private estate, capable in all branches of horticulture, who loves his work and loves plants and flowers. If you visit him, and in walking around the estate you stop to admire a specimen tree, this man can give you the whole history of that tree, and all peculiarities pertaining to it. In a few

Just Out

The Nursery Manual

By L. H. Bailey

An indispensable book for every nurseryman. Complete directions for propagating every kind of nursery stock, with many illustrations. Copies sent from the office of HORTICULTURE upon receipt of price, \$2.50.

DREER'S CANNAS

This season we harvested the finest and largest crop of Cannas that we have ever grown.

KING HUMBERT

And all the other good varieties you should have are included in our list and the roots are heavy and firm.

PRICES: The prices quoted are for dormant roots, which can usually be supplied until about the first of April, after which pot plants will be sent out and in which the advance in price will be as follows: All varieties listed at \$7.00 or less per 100 will be supplied in pot plants at \$8.00 per 100 or \$70.00 per 1000, and on varieties listed above \$7.00 per 100 there will be no change in price between dormant roots and pot plants.

All have green foliage unless otherwise specified.

TWELVE SPECIAL VARIETIES

Carmine Beauty. Deep bright carmine flowers freely produced high above the heavy dark green foliage which has a narrow red margin. 4½ ft. 15 cts. each; \$1.50 per doz.; \$10.00 per 100; \$90.00 per 1000.

Cheerfulness. No more appropriate name could be given to this brilliant novelty. Its beautiful bright fire-red or deep orange flowers appear early and continue without interruption until frost. Add to the prevailing color a golden border and center with each petal flaked carmine-crimson and you may form some conception of this fascinating variety. 3½ ft. 10 cts. each; 85 cts. per doz.; \$6.00 per 100; \$50.00 per 1000.

City of Portland. A wonderful bright rosy-pink, much deeper in color than Mrs. Alfred Conard or Hungaria; a free-flowering, vigorous grower. 3½ ft. 20 cts. each; \$2.00 per doz.; \$12.00 per 100; \$100.00 per 1000.

Fairy Queen. The dwarf, compact plants of this distinct novelty are covered with flowers from spring until fall. The plant rarely exceeds 3 feet in height. The flowers, of a clear rose-pink, are of medium size, good substance and borne upright on stout stems in great abundance. Each flower has a distinct cream-colored border.

We believe Fairy Queen will become one of the very popular Cannas. 60 cts. each; \$6.00 per doz.; \$50.00 per 100.

Flag of Truce. A large-flowered, creamy white with faint pink dots on each petal. The general effect is white. Not as white nor as tall as Eureka, but quite distinct and valuable. 4 ft. 35 cts. each; \$3.50 per doz.; \$20.00 per 100.

Golden Eagle. A wonderful clear golden-yellow of free, upright growth. The flowers are produced in large clusters well above the foliage. 4 ft. 35 cts. each; \$3.50 per doz.; \$20.00 per 100.

Harmony. Great clusters of good-sized, well-formed Geranium red flowers are arranged on good stems in such a manner as to give the trusses an almost globular appearance. 3½ ft. 20 cts. each; \$2.00 per doz.; \$15.00 per 100.

Pocahontas. (Bronze-leaved Olympic). Large oriental-red flowers borne on firm upright stems, just high enough above the foliage to show the entire head. The foliage is a dark bronze-green with emerald shadings; the ribs a darker bronze. 4 ft. 20 cts. each; \$2.00 per doz.; \$15.00 per 100; \$100.00 per 1000.

Poppy. Intense poppy-red. Large perfect florets in good trusses over greenish-bronzy foliage. Rich and effective. 5 ft. 20 cts. each; \$2.00 per doz.; \$10.00 per 100; \$90.00 per 1000.

Remarkable. This effective bronze-leaved variety stands out boldly among other sorts, not only on account of its height (6 ft.), but because of the beautiful scarlet-carmine trusses of bloom surmounting the rich green-bronze foliage. 20 cts. each; \$2.00 per doz.; \$10.00 per 100; \$90.00 per 1000.

Surprise. The brightest red Canna we have. It surpasses in brilliancy such popular varieties as Meteor and Lafayette and produces its great trusses with equal freedom. 4 to 5 ft. 35 cts. each; \$3.50 per doz.; \$25.00 per 100.

The President. When the Canna Firebird was introduced its immense florets and bright red color immediately insured its popularity. In offering The President we may best describe it as possessing all the good qualities of Firebird enhanced by extraordinary vigor and perfect healthy foliage. It grows to a height of 5 ft. and produces its immense trusses of giant florets in great profusion. The most sensational introduction of recent years. 35 cts. each; \$3.50 per doz.; \$20.00 per 100.

DREER'S SELECTED CANNAS

Including many comparatively new varieties, which we can offer in quantity at popular prices.

	Doz.	100	1000
Allemania (Orchid Flowered). Salmon with golden markings; 5 ft.	\$0 50	\$3 50	\$30 00
Alphonse Bouvier. Brilliant crimson; 6 ft.	50	3 50	30 00
Austria (Orchid Flowered). Large, pure canary-yellow with reddish dots in center of upper petals; 5 ft.	50	3 50	30 00
Beacon. Rich cardinal-red; 3½ ft.	1 00	7 00	60 00
Brilliant. Rich yellow with two red petals; 3½ ft.	50	3 50	30 00
Cloth of Gold (Dreer's). Very free flowering, golden yellow; 3 ft.	60	4 00	30 00
Dazzler. One of the best, deep fire-red, very free; 3½ ft.	1 00	7 00	60 00
Dragon. Very rich dark, ox-blood red; 3 ft.	75	5 00	40 00
Dr. E. Ackerknecht. Carmine lake, suffused with deep carmine, bronze foliage; 4 ft.	50	3 50	30 00
Duke of Marlboro. An attractive deep brilliant crimson; 4 ft.	50	3 50	30 00
Eureka. The best white for massing, very free and of fine habit; 4½ ft.	2 00	15 00	125 00
Fanal. An intense, fiery cinnabar-red, an ideal grower holding its flowers well above the foliage, one of the best bedders; 4 ft.	85	6 00	50 00
Favorite. This is the best red spotted yellow Canna yet introduced. The color is a rich, deep golden-yellow, the flowers are produced on strong stems well above the foliage; 5 ft.	50	3 50	30 00
Feuermeer. Brilliant fiery-scarlet; 4 ft.	85	6 00	50 00
Firebird (Oiseau de Feu). A remarkable variety perfectly formed florets, 7 to 8 inches across, of a brilliant cardinal-red; 4 ft.	1 50	10 00	90 00
Gaiety. Reddish-orange mottled with carmine and edged with yellow. The tongue is yellow and densely spotted with carmine; 4½ ft.	50	3 50	30 00
Garam. Very large bright carmine-red flowers, freely produced; 3½ to 4 ft.	50	3 50	30 00
General Merkel. Scarlet suffused with orange, base and edge of flowers marbled with golden-yellow; 4 ft.	50	3 50	30 00
Gladiator. Deep yellow freely dotted with red, a popular bedder; 4½ ft.	50	3 50	30 00
Goethe. Very attractive. Bright deep orange flowers of a very penetrating shade; 4 ft.	85	6 00	50 00
Gold Bird (Oiseau d'Or). This is the yellow companion to Firebird; the immense soft canary-yellow flowers are of good substance; 4½ ft.	85	6 00	50 00
Golden Gate. Yellow and red; 4 ft.	60	4 00	30 00
Hungaria. Flowers large, in good-sized trusses freely produced. The color is a beautiful rose-pink; 3½ ft.	85	6 00	50 00
Italia (Orchid Flowered). Bright orange-scarlet, with broad golden-yellow border; 6 ft.	50	3 50	30 00
J. D. Elsele. Vermillion scarlet overlaid with orange, good bedder; 4½ ft.	60	4 00	35 00
Jane Addams. Color a deep rich yellow with a touch of red at the throat; a clean, vigorous grower of upright habit; 4½ ft.	75	5 00	40 00

	Doz.	100	1000
Mrs. Alfred Conard. One of the very best cannas in commerce today. The large exquisite shaded salmon-pink flowers are produced in great abundance on robust upright plants; 4 ft.	1 75	12 00	100 00
Mrs. Karl Kelsey (Orchid Flowered). Orange-scarlet, suffused and striped with yellow; 5 ft.	50	3 50	30 00
Mrs. Woodrow Wilson. A rich but soft crimson-pink, with very large flowers, a robust grower and free bloomer, 4 ft.	2 00	15 00	
Olympic. Rich Oriental-red, shading lighter to the centre and dappled carmine. The individual florets and trusses are very large and of excellent form; 5 ft.	85	6 00	50 00
Orange Bedder. One of our own introductions and unquestionably the best of its color, a particularly bright orange with just sufficient scarlet infusion to intensify the dazzling mass of color; very free flowering. Awarded a certificate of merit by the S. A. F. & O. H. at New York, August, 1917; 5 ft.	60	5 00	40 00
Panama. The color and markings of this splendid Canna are unusual; the rich orange-red face of the petals is bordered with a broad edge of golden-yellow; 5 ft.	60	4 00	35 00
Pennsylvania. Vermillion-scarlet overlaid with orange; 5 ft.	50	3 50	30 00
Philadelphia. Rich deep red; 4 ft.	60	4 00	35 00
Queen Charlotte. Rich pomegranate-red bordered with golden-yellow; 3 ft.	85	6 00	50 00
Rosea Gigantea. Large flowers, borne in such abundance that the mass of color is amazing. A deep rich rose, almost a coral-carmine; 4 ft.	1 25	8 00	70 00
Salmon Queen. Rosy salmon-scarlet, blending to a rosy carmine towards the centre, a very effective bedder; 5 ft.	85	6 00	50 00
Scharfenstein. The beautifully formed, large round florets are produced in compact but graceful trusses. The color is a unique light red salmon with orange and carmine suffusions that forms a most attractive addition to the range of colors found in Cannas; 5 ft.	85	6 00	50 00
Schopenhauer. A rich brilliant red with yellow throat, very free; 3 ft.	75	5 00	40 00
Souv. de F. Langle. Very distinct orange-red color, edged with gold; 4½ ft.	75	5 00	40 00
Superb. Deep salmon with bronze foliage; 4½ ft.	60	4 00	35 00
The Gem. An entirely distinct spotted variety. The immense trusses of flowers are borne on upright branching stems well above the foliage, and are of deep cream or straw-yellow, spotted with deep carmine; 4½ ft.	1 50	10 00	90 00
Uhlberg. Entirely distinct, of a soft rosy-carmine; the throat of the flower is of a creamy-yellow, and the edges of the petals are also pale yellow; 3 ft.	60	4 00	35 00

	Doz.	100	1000
King Humbert (Orchid Flowered). The most popular Canna. Great orange-scarlet flowers surmount the vigorous dark bronze foliage throughout the season; 5 ft.	75	5 00	45 00
Lafayette . In some respects resembles the variety "Meteor" but the flowers are not quite as dark, stands more erect and the plant grows taller; 5 ft.	1 00	7 00	60 00
La France . Deep carmine pink; 4½ ft.	1 25	8 00	70 00
Lahneck . A free grower. The color is rose with lines and shadings of scarlet carmine hues, a narrow golden border adds to its beauty; 4 ft.	85	6 00	50 00
Louis Reverchon . A splendid bedder, large cochineal-red flowers; 4½ ft.	60	4 00	35 00
Maid of Orleans . Rich cream ground, mottled and shaded soft pink; 4 ft.	60	4 00	30 00

	Doz.	100	1000
Venus . Flowers of fair size, of a soft rosy pink with a pretty mottled border of creamy yellow; 3½ ft.	75	5 00	40 00
West Virginia . Intense rich crimson-scarlet with golden edge; 3 ft.	50	3 50	30 00
Wintzer's Colossal (Orchid Flowered). The largest flowered Canna. The florets often measure eight inches across and are of a bright scarlet; 5 ft.	75	5 00	45 00
William Bates . A splendid free flowering yellow of good size; 5 ft.	1 50	10 00	90 00
Wyoming (Orchid Flowered). Massive orange flowers which make a strong contrast with its rich bronze foliage; 6 ft.	50	3 50	30 00
Yellow King Humbert (Orchid Flowered). A sport from King Humbert in which the foliage is green and the flowers yellow with red spots. Very attractive.	75	5 00	45 00

HENRY A. DREER, 714-716 Chestnut St. Philadelphia, Pa.

The above prices are intended for the Trade only.

MINNESOTA STATE FLORIST CLUB MEETING.

The February meeting of the Minnesota State Florist Club was held at the University greenhouses, Southeast Minneapolis, February 19, 1920. About thirty members were in attendance. After a trip through the greenhouses and a study of some ninety varieties of cacti in one of these houses the regular business meeting of the Association was held. Among other things it was voted to ask the Secretary of S. A. F., to confer with the Federal Horticultural Board, requesting that all of the hearings of this Board be grouped at one, or possibly two, times during the year so that it would not be necessary for florists and others interested to make frequent trips across the country in order to be present at these meetings. Prof. W. S. Cooper of the University gave a very interesting lantern talk on "Ecology of Plants," especially in certain districts of California, showing views of the big redwoods and a considerable variety of California vegetation. Mr. August Vogt, of St. Paul, read a paper on "Proposed Plan of Florist Co-operation." This brought out an interesting discussion in regard to the florist business.

MINNESOTA NOTES

Easter stock is coming along pretty well, but will be none too plentiful as the country districts are buying heavily.

A. Lauritzen Warrendale, greenhouses St. Paul, lost his potting shed, two cars and had one greenhouse badly damaged by fire recently.

Max Kaiser of the Merriam Park Greenhouses, has returned from a Texas trip.

Supt. Theodore Wirth of the Minneapolis Park System, was at the University of Illinois the last week of February to deliver several lectures before the Department of Landscape Gardening.

The storage sheds of the Minne-

apolis Park System burned February 15, destroying considerable equipment. The loss is said to be about \$50,000.

Fred Busch of the Busch Greenhouses is spending a vacation in California.

NEW GLADIOLI

The following varieties of gladioli are offered for registration by John Lewis Childs, Flowerfield, N. Y. If no objections are filed prior to March 15, 1920, the same becomes complete:

Conspicuous (Childsii). Beautiful clear cardinal-red, with a large white throat. A very attractive combination of color. Originated by John Lewis Childs.

White America. Buds and partially expanding flowers, pale flesh, 136(½). Flower opens snow white, 2(1), with a faint streak of violet mauve, 195(1), or paler in the throat. Has the same strong habit of growth, form of flower and substance as America, of which it is a seedling.

PUBLICATIONS RECEIVED.

The Nursery Manual, by L. H. Bailey. Price \$2.50. The Macmillan Company. It is thirty years ago that the nursery book prepared by Liberty H. Bailey was first given to the public. Ever since that time this book has been considered a standard and has passed through no less than twenty-one editions previous to the edition which is now being put out under the title, The Nursery Manual.

In its present form, the work has been entirely rewritten and brought up to date in every way. In addition to the most complete directions for propagating all kinds of nursery stock, it contains an extended alphabetical list of plants with full indications under each one for propagation. The book contains a large number of helpful illustrations and is written in such a way that it will serve the purpose of the student, the commercial nurseryman and the private grower alike. In fact, it is a work which no one who has to do with nursery stock can afford to be without.

DREER'S "Riverton Special" Plant Tub

No.	Diam.	Ea.	Doz.	100
10	20 in.	\$4.50	\$49.50	\$375.00

DESTROYED BY HAIL

Last Summer a florist who had imagined
he was outside of the hail section lost
upwards of 50,000 square feet of glass
by hail with no insurance to recom-
pense him.

He is now a member of the Florists'
Hail Association of America.

Profit by experience and join the Asso-
ciation now. Address

JOHN G. ESLEB, Secretary
Saddle River New Jersey

NEW HAVEN FLORISTS AND QUARANTINE 37.

Florists all over the country are
showing increased interest in the mat-
ter of the numerous quarantines now
being placed. The following letter
has been handed to us by Mr. J. K.
Alexander of East Bridgewater, Mass.
It reads as follows:

"Our Society is heartily in favor of
the stand you have taken in regard
to the Illinois Quarantine, as pub-
lished in HORTICULTURE. A vote was
passed at our meeting to oppose the
states passing laws of this kind; un-
less checked now probably every state
will pass similar laws which would be
disastrous to the Dahlia industry. I
will also bring this matter up at the
Executive meeting of the American
Dahlia Society to be held in New
York early in March.

Yours very truly,

THE NEW HAVEN COUNTY HORTI-
CULTURAL SOCIETY,

WM. J. RATHGEBER, Sec.

LANCASTER COUNTY, PA., FLOR- ISTS' ASSOCIATION

Rather a small number attended
the meeting on Thursday, Feb. 19th
in spite of the fact that the matter
of increasing the dues was up for
consideration. This was partly the
fault of the weather, as many of the
members of this Association are men
who attend their own fires and can-
not leave if the weather is severe.
The dues were left at the old rate
but all of the ladies who transferred
from the Ladies' Auxillary are to pay
full membership dues and be entitled
to full membership privileges. We
are not going to be left behind in the
emancipation of women movement.

The lecture of the evening was by
F. C. Bucher, farm expert for Lan-
caster County, and the subject soils.
Visitors were Mr. T. J. Nolan and a
representative from the Robert Craig
Co.

W. Atlee Burpee exhibited a vase
of their new sweet peas in such fine
shape that there are no adjectives to
properly describe them.

ALBERT M. HERR.

PARTICULAR AS TO VARIETY.

"Have you no potted geraniums?"

"No. We have some very nice
chrysanthemums."

"I must have geraniums. They are
for my wife."

"I'm sure she'd like these chrys-
anthemums."

"You don't understand. The geran-
iums are to replace some I promised
to take care of while she was
away."—Stray Stories.

GROWING LILY OF THE VALLEY.

Of all the imported bulb stock, during the war, none was missed more than the beautiful lily of the valley. Here is a plant which I am sure can be produced on a commercial basis equal to the best imported Berlin crowns, says Frank W. Gilbert in the Canadian Florist. The heat and cold does not affect it, providing it has the proper situation. There are such situations where, when once started, it could produce all we would require.

The lily of the valley is a native of Great Britain. I have seen it growing beside the ditches in the woods and shady places, sending its rhizomes under ground and spreading all over just above the moss line, where the roots can reach the water, yet where it is dry on the surface.

In choosing a site, two things are necessary,—water and shade, or partial shade, during the hot months of summer. The soil should be a sandy loam, with a clay or cool bottom. Provision should be made for irrigation, or the Skinner system, much the same as one would for Ginseng.

In preparing the land I would sub-soil it two feet deep, not trench it. Work in on top a good dressing of leaf mould, working it down level as a seed bed. I would choose the young pips which have been grown here for stock as it takes three years to grow a strong flowering pip.

In sorting out the pips I would break the rhizome about one inch below the pip to induce them to make fibrous roots. The best time to start them is the early fall, as soon as the foliage turns yellow.

In planting stretch a line and cut straight down with a spade. Place the pips upright, about one inch below the surface and two inches apart in the row, with nine inches between rows. Make your beds as wide as you like, using a light cultivation to keep the weeds down. The following fall I would give a light coating of one-year-old barnyard manure and the same the next year. You will find that the second year from planting, young growths will come up over the bed. These will give more stock for planting. When you lift your pips the third year, lift your forcing crowns in the fall and store in a cool place, where they will not dry out.

Looking at this from a commercial standpoint, 4,000 square yards can be made productive, leaving 840 square yards for paths. They would produce 288,000 pips, which at \$10.00 per 1,000, would bring \$2,880.00 per acre. The initial cost of stock and labor would be the largest outlay.

THE BOILER OF Unequalled Fuel Economy

Kroeschell Boilers, the best by test since 1879. Forty years' experience.

THE QUALITY PLACE OF BOSTON

Regarding the Kroeschell, it is the best we have ever had and satisfactory beyond our expectations. It heats up especially quick and has saved us considerably already in the price of fuel. When we are in need of another boiler we will give the Kroeschell the first consideration.

After using your No. 12 Kroeschell Boiler I came to the conclusion that had I to install more boilers it would be the Kroeschell and no other. It really is a pleasure to heat, no trouble to get the desired heat in a very short time.

(Signed) CHRIST. WINTERICH,
DEFIANCE, OHIO

THE MARKET

During the past week some decided changes have occurred in the market situation. Flowers have come in more rapidly than they could be moved. Probably the weather has had something to do with short sales but in any event there has been a very liberal supply and consequent drop in prices. In Boston there has been a general sliding off in value all the week. Roses have run from 4 to 15c. with carnations from 6 to 10c., excepting exceptionally fancy stock of Laddie and Rosalia. Sweet peas have gone fairly well at \$1.50 and \$2.00. Callas are now down to \$2.00 and the market is full of them. Stevia is practically out and other things are selling slowly. Reports from Philadelphia show that while sweet peas are coming in freely, they are of excellent quality, which holds true of freesias and daffodils. There as elsewhere violets are in good supply and moving slowly. Gardenias are a feature of the Philadelphia market and moving well. This is practically the story for all of the other markets. There is a general decline in prices with a decided slump in roses in New York.

BOSTON.

W. E. Lenk, formerly with the Halifax Gardens, is about to establish a new plant in Arlington. He proposes to erect three Hittings houses, 340 x 46 feet. Ground will be broken March 15th. Two Bigelow boilers of 125 h. p. each will heat the plant. Roses will be grown exclusively. Two of the houses will be in operation in the fall, and the third will be ready next spring. Mr. Lenk is known as one of the most successful rose growers of New England.

The Boston Florists' Association will hold its next meeting Tuesday, March 2d. It will be devoted largely to a discussion of the wholesalers' problems.

An important meeting of the Dahlia and Gladiolus growers of New England is scheduled for today, Saturday, at the State House in Boston, to consider the Illinois Quarantine.

I. Mirsky, a salesman in the market, who recently lost his wife just after she had arrived from Poland, has been given a substantial check by fellow salesmen, customers and growers. For four years Mr. Mirsky tried to get his wife out of Poland, but she lived only four days after she arrived.

NASSAU COUNTY HORTICULTURAL SOCIETY.

A special meeting of the Nassau County Horticultural Society was held in Pembroke Hall, Glen Cove, Long Island on Wednesday, February 18, at 7 P. M.

President Thomas Twigg occupied the chair.

James Hutchinson, Herbert Woodger, Stanley Balance, Alfred Woodger, David Dean, William Young, Robert W. Burnett, Edward Manda, John D. Wilson, and William Alexander were elected to active membership and one petition for active membership was received.

President Twigg was empowered to appoint a committee to secure judges for all shows and exhibitions to be

held by the society in the coming year.

Mr. George Platt, one of our active members died with pneumonia last week and the secretary was instructed to write a letter of sympathy to Mrs. Platt and family.

The exhibits for the next monthly meeting to be held March 10th will be Pot or Pan of Tulip, 12 mixed Roses, 12 spikes of Antirrhinum.

ARTHUR COOK, Cor. Secy.

PHILADELPHIA.

J. Otto Thilow will address the Florists' Club March 2nd on "Horticulture in the South Sea Islands," illustrated by stereopticon. He was fortunate in securing some splendid pictures on his recent trip there, and this will be well worth going to see—in addition to hearing the comments of a trained observer in our own line of business.

Recent Philadelphia visitors include Mr. Eckstein, Eckstein-Whitney Co., Buffalo, N. Y.; Elmer J. Weaver, Ronks, Pa.; E. P. Hotscher, Manheim, Pa.; Charles M. Weaver, Ronks, Pa.

FERNS

THE VICTORY FERN (*Nephrolepis victoria*)

We take pleasure in offering this new and valuable variety of *Nephrolepis*. It is a beautifully crested form of "Teddy, Jr." with fronds frequently subdivided on the ends, making a most unique, distinct, and desirable variety.

This fern was

AWARDED A BRONZE MEDAL

at the S. A. F. Convention at Detroit in August, 1919. The judges of the award reported as follows: "Special stress is laid on the new fern Victory, with a rapid growth and a branching at end of fronds, making it a shapely plant. It should be a commercial success, and we **RECOMMEND IT MOST HIGHLY.**"

Strong plants, 2½-inch pots.....\$3.00 per dozen, \$20.00 per 100
Strong plants, 3½-inch pots..... 7.50 per dozen, 50.00 per 100

NATIONAL PUBLICITY CAMPAIGN.

Had flowers been plentiful, the business for St. Valentine's Day would have been such as to make the day rank, as a flower day, next to Mother's Day. The unfortunate condition of the flower markets throughout the country which existed before and during the St. Valentine's Day business period, curtailed possibilities very considerably, and the volume accomplished was limited only by the supply of flowers available. In the emergency there was a generally good demand for plants.

Now, what has placed St. Valentine's Day on the map of business if not our Publicity Campaign? Two or three years back the business for this day was very ordinary in character. A good business prospect was passing into obscurity for want of exploitation. Our Publicity Committee took the matter in hand, and through judicious yet most impressive advertising in the magazines, and dissemination of reading articles which were favorably received by a large number of newspapers throughout the country, among them some of the largest, in all of which articles the suggestion was apparent that flowers were more suitable for St. Valentine's Day gifts than anything else, the public led to see that a splendid old custom was falling into the discard, with the result that there has been a revival highly profitable to our industry. This campaign work continued through two more seasons has had the effect desired. To insure all possible publicity for the day, our Promotion Bureau has urged florists individually to connect with the Campaign advertising through the use of their local newspapers' advertising columns, and has supplied many hundreds of special electrotyped advertisements for this purpose, all of which in use have added to the publicity for the day as well as serving the local interests of the advertisers. An additional aid this season has been the enormous quantity of poster stamps and window posters put out by our Promotion Bureau.

A similar procedure has characterized the campaign work for Mother's Day. We all know that this has been a "made" day for florists, made through publicity, in which the work of our Publicity Committee has been wonderfully conspicuous. All in the trade would suffer if interest in Mother's Day were allowed to flag.

ORCHIDS

We grow and sell nothing but ORCHIDS. If you are in the market for this class of plants we respectfully solicit your inquiries and orders. Special lists on application.

LAGER & HURRELL, Summit, N. J.

Already attempts have been made by hostile interests to sever the connection of flowers with this day of days. Only organized effort can cope with a situation of this kind, and we have it in our Publicity Campaign.

But the Publicity Campaign can be only what the members of our trade make it, and they are far short of making it all they could. Only a small percentage of those engaged in our industry are contributing to its support. These contributors have the interests of the trade generally at heart. They are conscious of the great good our campaign is accomplishing, see their shares of the benefit materializing in their own business.

DIAMANT. Pure white.....	2.75	18.00
*GOLDEN AGE. Sulphur yellow, free flowering..	1.75	12.00
*PRIMROSE DAME. Primrose yellow, free flowering.....	2.75	18.00
*ROBERT BROOMFIELD. Fine large white, tall grower.....	1.50	10.00
*STORM KING. Pure white, free bloomer, long stems, very satisfactory.....	1.75	12.00
*STRADELLA. Purple, free flowering, long stems	1.75	12.00
VIVIAN. White heavily tipped violet.....	2.00	15.00
WHITE SWAN. Pure white.....	1.75	12.00

POMPON.

*DARKEST OF ALL. Deep crimson, nearly black, free flowering.....	\$1.50	\$10.00
*ELFIN. Yellow, good everyday variety.....	1.75	12.00
LA PETITE BARBARA. Small white.....	1.75	12.00
*LITTLE BELLE. Lilac pink, free flowering....	2.00	15.00
*SNOW CLAD. Small pure white, very free.....	2.00	15.00

The above list includes only those sorts suitable for commercial purposes, but those marked (*) we recommend especially for florists' cut flower trade.

Not less than six of a kind at dozen rates, or twenty-five of a kind at hundred rates

ASTER SEED

High grade tested stock for the commercial florist, raised by leading Aster seed specialists.

EARLY.

QUEEN OF THE MARKET. White, Royal white, shell pink, rose, lavender, purple and mixed, $\frac{1}{8}$ oz. 30c.; $\frac{1}{4}$ oz. 50c.; $\frac{1}{2}$ oz. \$1.00; 1 oz. \$1.85.

MEDIUM EARLY.

ROYAL ASTERS. Long stem branching habit, free from laterals, a valuable type; white, shell pink, rose, lavender, purple, mixed, $\frac{1}{8}$ oz. 40c.; $\frac{1}{4}$ oz. 75c.; $\frac{1}{2}$ oz. \$1.35; 1 oz. \$2.50.

MIDSEASON.

MIDSUMMER INVINCIBLE. An all around valuable florists' market sort. White, shell pink, rose, lavender, purple and mixed, $\frac{1}{8}$ oz. 60c.; $\frac{1}{4}$ oz. \$1.00; $\frac{1}{2}$ oz. \$1.75; 1 oz. \$3.00.

The Three Best Rochester Types—MIKADO PINK, LAVENDER PINK, WHITE ROCHESTER, $\frac{1}{8}$ oz. 75c.; $\frac{1}{4}$ oz. \$1.25; $\frac{1}{2}$ oz. \$2.25; 1 oz. \$4.00.

PINK ENCHANTRESS. An excellent midseason branching; $\frac{1}{8}$ oz. 75c.; $\frac{1}{4}$ oz. \$1.25; $\frac{1}{2}$ oz. \$2.25; 1 oz. \$4.00.

KING ASTERS. Slightly quilled petals with incurved centers;

We have taken space at the International Flower Show in New York, and L. J. Reuter will be in attendance the entire week of March 15th, and will be pleased to meet all our friends. If we can be of any assistance to visiting florists, don't fail to call on us.

L. J. REUTER CO. Plant Brokers 15 Cedar St., WATERTOWN STA. BOSTON, MASS.
Short P. O. Address: L. J. Reuter Co., Boston 72, Mass.

GENERAL NEWS NOTES.

Mrs. Jennie P. Snow of Sharon, Mass., met with a serious disaster in the loss of her largest greenhouse, caused by the great weight of snow and hail on the roof. Although six men and boys worked all Sunday trying to clean the snow off, it finally caved in. About 5000 feet of glass in the building and the loss is estimated at about \$3000.

The Rochester Florists' Association

is strongly opposed to the proposed bill to establish a quarantine preventing the interstate shipping of cut flowers, plants and similar products. Resolutions were adopted at a meeting of the association protesting against such a bill which, it is asserted, will cripple the flower and seed business in the Genesee Valley.

H. J. Hughes has given up his flower store at Sanford, Me., and returned to Dover.

According to a New York report Charles Thorley, the florist, has purchased the former home of John D. Wing, a five-story dwelling, at No. 16 West Forty-ninth street, which he will alter to house his business for a time at least. The property is 25x100. Mr. Thorley bought the late residence of Mrs. Russell Sage, at No. 604 Fifth avenue, last month through Michael Dreicer for \$441,000.

THE TALK OF THE TRADE

One of the Boston papers is responsible for the statement that florists favor daylight saving. There is a question as to how much truth there is in that statement. I have talked with quite a number of florists and practically all of them express themselves as opposing the plan. Some are rather mild in their objections and some are rather strong.

Florists in general are closely akin to the farmer. What is necessary for one in the way of sunshine and climatic effects in general is necessary for the other; take for instance the rose grower. The last cut in the afternoon under daylight saving plan must be made very early, or in other words, while the sun is still high. It isn't easy to get the section men to come back later on and make an evening cut; consequently buds are cut tighter than they should be during the very warm weather or they will be too open in the morning.

Also, the general run of florists are interested in outdoor crops. Many of them have hay crops to handle as well as a variety of crops that are handled also by the farmer, and how many florists there are who are vegetable gardeners also. These are my reasons for saying that I doubt if the florists think differently than the farmer. The farmer is certainly in the minority but he has good solid reasons for opposing the plan, and those who are in favor of it are, generally speaking, in favor of it purely through selfish motives. Evidently the railroads are against it and for a very good reason. Take for instance Massachusetts; if it accepts daylight saving and New Hampshire, Vermont and Maine turn it down, which they seem inclined to do, there will be great confusion, and it is also by no means sure that Rhode Island and Connecticut will adopt it.

In spite of the severe weather that we have experienced for weeks and weeks past, the rose plants under glass are feeling the effects of the sun. Bottom breaks are appearing, the eyes are swelling, and a more vigorous growth is manifesting itself all the way through. This means mulching, as well as more water and more syringing. Of course there are some growers

who are so unfortunate that they are without sufficient coal to carry them beyond a few days and are living in a sort of hand to mouth way as regards the coal pile. These growers are of course handling their roses at a lower temperature than is good for them, and this will mean less water and less feed. Those, however, who are pushing their roses along normally will do well to give the plants a good mulch.

Cow manure is always to be preferred for mulching, but there are very few growers who are fortunate enough to be able to mulch with this. An excellent mulch can be made up with horse manure by turning it several times, mixing a small amount of soil with it and adding bone meal. You needn't be afraid of horse manure burning or doing too much in any way if you use it carefully. Turn the hose on to it just as fast as it is put on the beds; one man with the hose to follow up as the other men do the mulching will take the fire out. Leave a little draft of air on to let the ammonia escape, syringe thoroughly on each bright day, and if plenty of water is used there will be no burning.

There was a time when we were afraid to use horse manure, but that day has passed. Some florists mulch with this entirely and if used frequently and not too thick, excellent results are obtained. If cow manure is used, generally speaking, it is better to use a little soil with this also, providing the beds are shallow and the plants will stand a little building up with soil on top. If they are filled to the top with soil, use the manure clear.

The rose plants now show the natural tendency to jump ahead so be sure that you don't try to hold them back. Syringe frequently, keep the wood soft, the atmosphere damp, and give them all the water that they will take. They will show their appreciation.

A little talk on chrysanthemums for the coming season will not be out of place at this time. It is time now to propagate your stock, as well as buy those varieties which you have decided to handle as new ones for next season.

Starting off first with the large flowered type, I am reminded of one in

particular which has made good wherever it has been marketed, and that is the variety Barbara Davis. The bloom is bronze shaded with a lively red; the color is very difficult to describe. The growth is stocky, short-jointed, with heavy foliage, and if not planted too late, produces stems as long as is necessary for the market.

Another one that is exceptionally good if you want a very late one is Golden Mistletoe, a sport of Mistletoe, identical in growth but has a good clear yellow color and can be marketed well into December.

Where fancy flowers are wanted, the white and yellow Chadwick are still the standbys for late varieties. For the grower, however, who wants average commercial quality I would name the following as those which give good satisfaction:

In White, Early Frost, Oconto and Smith's Advance are heavily grown for early. Charles Rager and White Chieftain are good midseason varieties, and for late, Glenwood Hall, Timothy Eaton and White Seidewitz are satisfactory. Of course for very late, those which will come into December, we have Hamburg Late White and Mistletoe.

The very earliest yellow is Golden Glow, followed by Chrysolora, Marigold and Robert Halliday. Mrs. M. R. Morgan, Mrs. C. C. Pollworth and Golden Gleam are good midseason varieties, and one that has not been grown very heavily but is certainly a promising one is Richmond. It is called an early Bonnaffon, which describes the variety in every way. Every commercial florist should try out this sort as it comes in ahead of Bonnaffon and I know of no variety at its season that is better. For late, the old standby Major Bonnaffon must always be considered. Yellow Eaton is also a standby for this season.

In early pink, we have Pacific Supreme and Unaka, which are generally grown. Another variety, however, which is coming into favor and which is not grown as much as it deserves is Mrs. W. T. McNiece. For pink midseason, the field may safely be left to Chieftain, and following that into the later pinks, we come to Dr. Enguehard and Edyin Seidewitz. For those who do it well, and it really is not a hard

variety to grow, Wells' Late Pink is very desirable. This comes in some seasons in good shape for Thanksgiving, but it can be had later. Hamburg Late Pink is being introduced this year and gives promise of being a good commercial sort. It is a sport of Hamburg Late White, which means the same blood as Maud Dean, but the originators claim that Hamburg Late Pink does not show the center if taken from very late buds. We think about Oct. 1st is what they recommend.

Of course there are any number of other varieties that can be mentioned, some of which will do better than these with some growers, but generally speaking I believe those I have mentioned are the ones which are grown heavily and with the most satisfaction to all. I will take up the pompons next week.

St. Patrick's Day is almost here, and apparently there is going to be a widespread call for shamrocks. For many years John F. Rupp at Shiremanstown, Pa., has been a very extensive grower. A few years ago he was considered the second largest grower of shamrocks in the country, William K. Harris, of Philadelphia, being the largest. Whether this is the fact now or not I am not sure, but Mr. Rupp tells me that he now has about 150,000 plants on his benches. He also tells me that the seeds are imported every year from Cork, Ireland, and planted out of doors in cold frames, where they are left until in November, when the plants are potted up into 2½ and 3-inch pots. He believes that plants grown indoors all the time, that is, the seeds sown in a greenhouse, do not give as good results. Mr. Rupp ships his plants all over United States and into Canada. Even Southern florists take a considerable number.

The plant which is grown for shamrock is *Trifolium minus*; at least that is what the florists call it, and it is under that name that A. Blanc, of Philadelphia, introduces the "only genuine shamrock." It is really a variety of our common white clover, *Trifolium repens*. Whether this is the true shamrock or not, nobody really knows, and nobody probably ever will know. It is simply a matter of difference of opinion at the present time, for a great many people claim that the wood-sorrel (*Oxalis Acetosella*) is the real shamrock. W. M. in the *Cyclopedia of Horticulture* has this to say about it: "Moreover, according to Sowerby the wood-sorrel is in perfection on St. Patrick's Day, while white clover is not. The wood-sorrel is sent in great quantities from Ireland to

London for St. Patrick's Day. On the other hand, it is said that clover is the plant most commonly used in Ireland. Half a dozen other plants have their followers, and these are all plants with three leaflets. Nevertheless, there are those who deny that St. Patrick used the shamrock as a symbol of the Trinity. These declare that the water cress is the true shamrock. The question will always remain an open one."

WHOLESALE'S NIGHT

Important Meeting of the Boston Florists' Association.

Tuesday night's meeting of the Boston Florists' Association was very largely attended, and the discussion which was carried on largely by the wholesalers aroused much interest.

Mr. Charles Robinson, chairman of the wholesalers, led the discussion. Mr. Robinson laid the falling off in the demand for flowers to high prices. He said that the florists in the smaller places outside of the city limits felt that the high prices must drop because they cannot continue to do business unless they do. Mr. Robinson said that the wholesalers were trying the hardest of anybody in the trade to move flowers, and were paying higher prices in proportion than any other line. He also said that he believed that when out of town florists telephoned in for goods, their orders should be given to the wholesalers alone.

Mr. William Thurston, manager of the Cooperative Market, made a reply to some of the charges made at the last meeting. He spoke in part as follows:

I have been invited to attend this meeting and was informed that I should have an opportunity to make a few remarks in reply to the statements made about myself and the Boston Flower Exchange at your last gathering.

At the last National Florists' Convention in Boston, there were delegates from our largest American cities who were instructed to study the system and methods of the Boston Florist Exchange, to see if our practical ways could be successfully copied in their native cities.

We have the reputation of having the largest and the best market for the growers benefit in America, and to publicly publish a series of false, discrediting and untruthful statements about an institution which is so admired by other cities, is little short of a crime.

Now to get down to details, I want

to answer the charge of retail selling in the market. This is one thing I have always opposed and fought unsuccessfully. We have had rules against it and at different times I have started out on campaigns to stop it, but the trouble is that no rules yet made had the necessary teeth in them, or in other words there has not yet been devised a way to inflict a penalty on the offender that would positively and effectively stop this practice. My efforts, whether persuasive or threatening, have been ignored and on occasions where the offenders have been given attention by the Board of Directors, they have explained that the buyer was a relative, wife, sister, or uncle's wife or sister's chum, or that the buyer was a wholesale cigar or clothing dealer who had sold them goods and had been invited to drop in so they could return the favor.

What can be said in cases like that? How can a legitimate case be made out against an offender and how can a penalty be inflicted? The Board of Directors have not discovered a remedy so why not have those retailers who complain make suggestive corrective criticism and give us some intelligent and effective plan to produce the desired results. But let us take a broad view of this subject and stop and consider that everyone of us, sooner or later, will have things happen that will put us under obligations and favors to our neighbor and fellow-man.

Now a florist is particularly fortunate in being in a line of business where he can nicely return these said favors and obligations by gifts of flowers or selling at wholesale prices.

But you may say that the party you saw in the market was your customer. Of course it was your customer—but because he or she does favor you with their trade, do you think you exercise a control over their acts or the acts of their friends who may happen to be some salesman or grower or myself, one who may be indebted to your customer and who is repaying that mentioned indebtedness in our own private way.

Then again some of our growers get an order to be delivered in Boston or the suburbs. His greenhouses may be 25 miles away and owing to lack of material, uncertainty of express delivery and handling, he simply telephones to me for assistance and I have the piece made up for him and delivered as he instructs. Also flowers for hospitals the same way.

Being a stall holder and paying rent for his own place of business in our market, it does seem he has the right and privilege to attend to this part of his business without interference from

the retail stores or the management of the market.

Again there are instances where proprietors of retail stores get too many orders for the same evening and they call on a market salesman to assist him and I positively know of an entire wedding outfit of eight bouquets baskets and other times of several funeral designs *made up in the market because* the salesman could not leave as he was expecting shipments from his greenhouses.

Should an outsider decide or object to any deal between two occupants of the same business house?

Now they want to know if it is fair to have a salesman buy up flowers from each other or before the market opens.

I believe the Board of Directors are the best judges of this question and it *may* be a *question* in some cases and then again there are instances where it should stand no interference from an outsider.

For instance I can't see where any comments should be forthcoming in the case of a small grower and stallholder who sells his own flowers, has twelve or more hours work to do at the greenhouse, is short of help there and can't spare any time. He comes to the market early and wants to return quickly.

Now a salesman knowing these conditions offers him a price for his entire lot of goods and makes his ordinary salary commission out of the difference between the buying price and the selling price.

Should this be anybody's business outside of the contracting parties? Is not this stallholder simply transacting his business in his own establishment, the selling branch of his greenhouse plant.

The growers are not stupid, they know the market prices and are not selling their flowers to the salesman for nothing. The salesman cannot *ask* more than the market price, and the grower has the favor done him of quickly getting back to his work in his greenhouse and avoids the responsibility of waiting and collecting his money from some slow paying buyers. Just reason it out yourselves and see if it is not a rather bold assumption on the objectors part to attempt to interfere.

It is asked, "is it fair to have the manager buy flowers to fill orders?" *On every lease a stall holder signs there are a set of rules on the back, and Rule 17 reads:* The manager at his own discretion, may purchase telephone or telegraph orders but under no conditions will the corporation hold itself liable.

ALFRED M. CAMPBELL begs leave to extend a cordial invitation to all those who would like to look over a promising vista of **EASTER LILIES** and other specialties for the coming holiday, to visit his flower farm at **STRAFFORD, PA.**, and see for themselves and be well repaid in pleasure and profit. Now is the time to make reservations. Really good Easter stock is scarce. Strafford only 15 m. out Main Line **PHILADELPHIA.**

Without any fear of contradiction I brand the statement that I am in the habit of buying flowers in the market to fill retail orders as a malicious and harmful lie, and particularly offensive, because I *do* pass up such opportunities to my financial detriment and by so doing I often create feelings against me from my friends. Now that I have explained things does any one blame me if I violently resent this unnecessary dictation from outside parties and if I question the authority of anyone to thus interfere with these described rights and privileges of our growers?

After all I have said on this subject I still want you to feel that I am broad enough to accept any intelligent corrective *suggestions*.

I emphasize suggestions instead of criticisms, *if* they are based on a fair and generous view of any situation, and I will try to carry out any of these suggestions if they are *for the benefit of and for the good* of the business in general.

Elijah Gorney arose to say that he had not meant to make any personal reflections on Mr. Thurston in his remarks a month ago.

Mr. Edward Welch, of P. Welch & Co., said that most of the wholesalers' trade went out of town and that the retailers in the city seldom bought of them unless their market was closed and they were forced to do so. He also condemned the practice on the part of retailers of buying from private estates, and said that the retailers often went to out of town markets to buy, frequently having to pay more than they would have been charged in Bos-

ton. He closed by saying, "Let us cut out all this sand-bagging business and get together to elevate the trade."

Thomas F. Galvin said: "If a poor piking florist like myself can afford to buy flowers for my rathskeller, I see no reason why the big men should find much fault." He also said that he believed the growers were entitled to all which they received for their goods and were at liberty to get more if they could.

Mr. Samuel Robinson argued that much good has been done by the Association and that more good would be accomplished if people would talk as freely at the meetings as they did outside. He declared that artificial flowers were justified by the needs of the times, such as on Memorial Day and other occasions when fresh flowers could not be obtained.

Benjamin Snyder stated that at least 65 or 70 per cent. of all the flowers coming into the market were handled by wholesalers and that they were devoting their whole efforts at finding or creating new markets for flowers. He deprecated the habit of some rose growers who graded their roses poorly. Nine inch flowers were graded from a poor nine inch down to no stems at all, while those of the longer grades were often weak and wobbly although they might measure up to the proper length.

Mr. Sydney Hoffman then arose and urged the members of the Association to get together in an effort to raise enough money to advertise liberally in the papers for the purpose of moving flowers at the present time when the market was overstocked. It is probable that this plan will eventually go through.

The Blackstone plan

At the recent convention of the Tennessee Florists at Knoxville, Mr. Z. Blackistone, of Washington, made an excellent address on local publicity. It seems to us, however, that a few of the points which he made should be given very careful consideration before they are accepted by florists in general. Mr. Blackistone's argument in favor of a better general and technical education among all workers in the floral trade can hardly be controverted. Likewise his proposal of a spring flower week campaign for different communities is reasonable. His third proposition which calls for a general newspaper publicity campaign the year round with a "Say it with Flowers" week in the fall can be endorsed by progressive florists everywhere. It is quite likely true that there is grounds for the assertion that the ordinary florist is not as well posted about his business as he should be and could be. There are many factors entering into the growing and sale of flowers, designing of set pieces, the decoration of homes and public buildings, and the proper handling of cut flowers, which florists overlook to a large extent. In the matter of publicity, too, the average florist, not having had any training in the advertising field, finds himself at a disadvantage.

It is no doubt true that greater concerted and co-operative effort is needed to build up a market for flowers, but we seriously question whether Mr. Blackistone's plan is not open to criticism. Mr. Blackistone argues that the mission of flowers is to spread beauty, fragrance, sunshine, happiness, love, sympathy. All this is admitted, but when the recommendation is made that the florists of each community for one week of the year, in the spring, assemble their surplus flowers and give them away, we feel a little doubtful. Presumably considerable advertising would be derived from a "Florist's Spring Sunshine Week" as Mr. Blackistone would call it, but isn't there the danger, on the other hand, that flowers would be cheapened in the eyes of the public and that selling would really be rendered more difficult? It is argued that the flower business is founded on the gift idea. Well, so is the candy business to a large extent, but how often do we find a candy store giving away confectionery? The surplus and damaged goods and the stale stock may be offered at a lower price, but

something is received for it. Nobody ever thinks of getting candy from a candy maker for nothing.

Mr. Blackistone says that it is one of the joys of the florist's profession that they have the opportunity to impart pleasure by giving away flowers, and that if no business returns come from it, yet the giver will reap heaps of satisfaction. We admit all this, yet it seems to us that the stability of the trade is threatened by a practice which leads the public to believe that the florists can afford to give away their products. It is human nature to begrudge payment for anything that was once obtained for nothing. If the flowers might quietly be taken to the poorer districts of the city and given to weary mothers and ill-nourished children to whom a blossom really comes as a ray of sunshine, there would be some source of satisfaction. Also there would be good advertising in having mark-down sales, with the explanation carefully set forth that these sales were made possible only by certain temporary conditions. All sentiment aside, we believe the public should always feel that cut flowers in the shops are just as much a merchantable product as candy or stockings or gloves.

It seems to us that a great opportunity for developing an increased flower trade in Boston as well as disposing of an unexpected surplus was wholly missed

The matter is brought up here because it would seem as though florists in every city should be prepared to meet such a situation and to turn it to advantage instead of weakly submitting to a loss. As a result of the weather conditions and transportation difficulties the greatest surplus that has been known in the market for many months was piled up. The ice-chests were full and the benches were crowded. Naturally it was impossible to dispose of large quantities of flowers before they spoiled. Penn was the only retailer who made the most of the situation by advertising a reduction in flowers, and he did not reach the point of explaining to the public why this reduction was made possible, which we think he ought to have done.

Now in almost any other line of business the trade would be so organized that a situation like this could be made of real benefit to the people in it. Suppose that the florists' association had possessed a marketing committee whose duty should include devising methods to deal with a surplus. Suppose also that this committee should have rounded up the wholesalers and proposed a general campaign for increased flower sales. The next step would have been to get in touch with the leading retailers and to offer them a big reduction in price if they would do their part, which would consist of taking space in the Sunday newspapers to announce a special sale of flowers on Monday. These advertisements should have stated the facts plainly—that is, that because of the transportation troubles an accumulation of flowers had piled up in the local markets. The advertisement should have gone on to say that the flower merchants had got together and decided to give the public the benefit of this situation, and that they were doing this by cutting the prices in half or nearly that in order that everybody might have flowers on that occasion.

We feel that with this frank statement and good sized copy in the papers, there would have been a rush of business the next morning that would have entirely cleaned up the surplus and left retailers and wholesalers alike with the jingle of coins in their pockets. Of course nothing of this sort can be put through without organization and without having some good brains on the spot, but it is the kind of program which would be of the greatest value to florists. Not only would they clean up their stock, but they would also get new people into their stores and lay the foundations for future business.

ALEXANDER'S DAHLIAS

For Florists and Seedsmen

If you are looking for something good for your florists' business, try my New Cut-Flower Varieties offered below. I highly recommend them:

MAUDE ADAMS

(New Show Dahlia)

A pure snowy white very daintily overlaid and suffused the sweetest shade of rose-pink imaginable. It is the best of my introductions for florists' use, and a variety I can highly recommend. "Maude Adams" is the most prolific Dahlia of its color. It has good stems and is an early Dahlia to blossom, continuing throughout the entire season. It has the necessary features that make it stand shipping well, and makes up good in all kinds of work. Strong divisions. \$3.50 per dozen, \$20.00 per 100; clumps at \$5.00 per dozen, \$35.00 per 100.

HORTULANUS FIET

(Giant Decorative Dahlia)

Beautiful salmon-pink with a slight blending of yellow. Good divisions. \$15.00 per 100, \$2.00 per dozen.

MADONNA

(New Peony-Flowered Dahlia)

A very beautiful white, very slightly tinted with a most delicate shade of lavender-pink. The form of the flower is original, each petal curling and twisting in a very pleasing manner. An excellent cut-flower variety. Strong divisions. \$1.50 per dozen, \$10.00 per 100; Clumps, \$3.00 per dozen, \$25.00 per 100.

MINA BURGLE

(Decorative Dahlia)

The finest scarlet cut-flower Dahlia to my knowledge. Flowers of large size, on long, wiry stems, well above the foliage. Good divisions. \$1.50 per dozen, \$10.00 per 100; clumps, \$2.00 per dozen, \$15.00 per 100.

FRANK A. WALKER

(New Decorative Dahlia)

A charming shade of lavender-pink, with long stiff stems, making it first-class as a cut-flower Dahlia. An exceptionally early bloomer. Good divisions. \$3.50 per dozen, \$25.00 per 100; clumps, \$5.00 per dozen.

MRS. WARNAAR

(Peony-Cactus Dahlia)

Gigantic flowers of creamy white, suffused a delicate shade of pink. An early continuous bloomer. Stems from eighteen to thirty-six inches long. Good divisions. \$5.00 per dozen, \$35.00 per 100.

If you are interested in Cut-Flower Varieties, I will recommend to you the best varieties in the colors you want, and give you the benefit of my twenty-five years' experience as a Dahlia Specialist.

MY TRADE LIST OF 1920 gives complete descriptions and prices of Over 300 of the Most Up-to-Date Dahlias in the World, and is mailed free. Write for it now.

J. K. ALEXANDER, The Dahlia King

The Largest Dahlia Grower in the World East Bridgewater, Massachusetts

THE MARKET.

The market has been going down steadily for the last week due both to a largely increased supply and a comparatively light demand. Truth to tell, the market is stocked more heavily than for many months past, and apparently a reaction has set in against the high prices which have prevailed for a long time. This is especially noticeable in the small towns, from which places orders are coming in very slowly. In Boston, some kind of an energetic campaign must be undertaken if the stock is to be cleaned up at all well.

Roses are selling at 16c., with specials at 25 to 50c. Many carnations are going at 2c., while 5c. is a high price. Callas have come down so low that many sold at \$1.00 per dozen, although the very best ones bring \$3.00. Sweet peas range all the way from 50c. to \$3.00, according to quality and the salesman's ability. Snapdragons sell from \$1.00 to \$3.00, and Violets sell none too well at 50c. to \$1.00 per bunch. Freesias are rated at from \$3.00 to \$10.00.

In New York, the situation is much the same, although roses are running a little higher than in Boston. Carnations are quoted at from \$3.00 to \$6.00 the first of the week, but kept steadily

dropping. Boston prices hold good for most of the other flowers, although violets are even lower than in the Boston market. Snapdragons are running somewhat higher. Tulips sold fairly well, the price ranging from \$6.00 to \$8.00. Paper whites and jonquils bring \$4.00 to \$6.00.

There has been a considerable drop in prices all along the line in the Philadelphia cut flower market. Nothing sensational or unlooked for, but gradual and steady as the week rolled by. On March 1st, the general run is from 25 to 50 per cent. lower than one week ago. Roses and carnations are covered by the 25, while sweet peas and calendula might be classed in the 50. Quality is better, if anything, and a big business is being done, although the flu. and other epidemics have largely abated. Lent does not seem to have hurt demand to any great extent this season.

The story is about the same in all the other markets, excepting that Buffalo is getting rather better prices than either New York or Boston for carnations, snapdragons and violets. Japanese lilies are plentiful enough to be quoted in Buffalo and sell from \$8.00 to \$10.00. Mignonette in the same market brings \$6.00 to \$10.00 and calendulas \$5.00 to \$6.00. Altogether

it is a very different condition from that which existed a few weeks ago, and the trade is making a desperate effort to move stock more readily.

COAL SITUATION VERY BAD

When HORTICULTURE was going to press last week the outlook was for the speedy arrival of sufficient coal to keep most of the florists going without loss. An additional storm, however, with the piling up of transportation difficulties and other troubles prevented the arrival of coal and created a very serious situation. At this writing several growers near Boston say that they can hold out only a short time longer. In other parts of New England, especially in Vermont, there is only coal enough for a day or two.

WAX BROS. IN A NEW HOME.

Wax Bros., who have long been located at Tremont street, Boston, are now getting settled in their new store at 44 Temple Place. The new place of business is located in the heart of the shopping district and is three or four times as large as the old store. It has been attractively decorated and handsomely furnished, and of course contains the large assortment of carefully chosen flowers for which Wax Bros. have become famous.

Flowers Under Glass

Many plants will be benefited to a considerable degree by an application of lime, especially in houses where bone meal has been used liberally. Lime seems to make it possible for the bone which remains in the soil to be taken up and utilized. Fresh, air-slacked lime is good when free from lumps, but probably hydrated or agricultural lime is preferable, although it costs more. It's a good plan to work the lime into the soil before applying water. Of course, no good grower will use lime where he has just put on a fresh application of manure, bone or tankage. Lime is not needed to make the fertilizer available at first, and too much ammonia would be liberated. While this advice about lime applies to many plants, it is especially applicable to the growing of roses.

This has been an exceedingly difficult winter in all houses where it has been necessary to keep the temperature rather high. The severe cold winds have made unexpected inroads on the coal pile and only thoroughly well constructed houses have been kept at the right temperature without undue forcing of boilers. Many growers have run their houses cooler than they would have preferred, and with the coming of the warmer weather it will be desirable to push the temperature up again. Sixty-four degrees at night is about right for plants starting into growth, but when flowers are coming a little cooler temperature is needed in order to develop large blossoms. In any case watch out for mildew if you have to conserve coal, and keep the heat on well into the evening. Foggy, cloudy days are especially dangerous, and care must be taken then to keep the temperature up. This is good practice also after watering.

It is not an easy or even a pleasant task to perform, but all the drainpipes should be put into working condition before the big thaw comes. A thaw is inevitable, and unless pipes, catch basins and sewer openings are free, a lot of damage is likely to be done. Sometimes it pays to have a few tile drains laid where water frequently col-

lects, but of course, this is a job for warmer weather. Florists who have connected houses side by side have had a large amount of extra work this year on account of the snow which they have had to shovel out from the valleys. A winter like this makes the man who has separate houses congratulate himself.

There is every reason to believe that the demand for gladioli will be heavy this season, and wise florists will make fresh plantings every ten days or two weeks, even though the bulbs are higher than in past years. It remains a question whether the glads are best grown in solid beds or on benches, but in any case they should be kept coming along in good supply. Remember that the public always has a preference for the softer colors, and especially the better shades of pink. If you have had a market that would take freesias well, you may be reasonably certain that it will take gladioli too.

It is now time to sow sweet peas for Memorial Day and to have a good supply of flowers for the weeks following. Plant the seeds in a solid bed if you can. Many growers find that they can utilize the center of the house to advantage in this way, having benches on the sides. The arrangement gives them plenty of head room, which is most important with sweet peas. There are growers who grow their sweet peas on raised benches, but they have to give the plants much more attention than the man who has them in beds, and the flowers are seldom as good.

NATIONAL ASSOCIATION OF GARDENERS.

A gardeners' conference, under the auspices of the National Association of Gardeners will be held in the Engineering Building, 29 West 39th street, New York City on Thursday afternoon, March 18 at 2 o'clock, to which all those interested in the profession of gardening are invited. An opportunity will be presented for a general discussion of the association's policies, the work outlined for it, and the operation of the Service Bureau. This meeting occurs during the week of the Flower Show.

An executive meeting of the trustees and board of directors will be held at the Engineering Building, in the forenoon of the same day.

The Garden Club of America, which is manifesting an interest in the aims of the national association, will be addressed by William N. Craig of Brookline, Mass. on "The Gardener and His Cause" at the meeting of the club in New York City on March 17. Congressman M. L. Davey of Ohio will also address the meeting on Quarantine Bill No. 37. In a recent issue of the Garden Club Bulletin an article appeared by M. C. Ebel on "The Professional Gardeners."

WILL SAVE FLORISTS MONEY.

The F. T. D. Establishes a Bank Account Across the Line.

To facilitate, encourage and develop a closer relationship and a larger volume of international F. T. D. business this office has decided to broaden out and establish an International Clearing House whereby to save our members the unnecessary exchange rate that is forced upon our Canadian brothers.

The F. T. D. office has decided to establish a bank account on the Canadian side as well as an account on this side, to mail checks owed by American F. T. D. A. members to Canadian members from the Canadian bank, and Canadian bills due American members will receive American checks from the F. T. D. A. office.

Therefore, if you have any bills due Canadian members send them to this office with your check to cover, this will be deposited in the American bank and a check to cover your bill issued from the Canadian bank and likewise with the Canadian bills, their checks deposited in the Canadian bank and a check issued from the F. T. D. A. office instead.

Remember, that with co-operation we can do a great deal of good.

Yours for more F. T. D. A. co-operation,

ALBERT POCHELON, Sec'y F. T. D. A.

WASHINGTON OYSTER ROAST.

"And a good time was had by all," amply describes the Oyster Roast staged by the florists of Washington in one of the large greenhouses of the Washington Floral Company, in Alexandria, Va., on the evening of February 28. Led by a delegation from Gude Bros., in a large limousine, the florists made quite a procession journeying from Washington to the historic Virginian city in a string of poor men's Packards.

The greenhouse was decorated with palms and ferns and American flags. At one end a platform had been set up for "speakers," but this was largely utilized by a colored orchestra that set loose a considerable amount of "jazz." Oysters and clams on the half shell and cooked in several styles, with all the fixings, were served.

Among the speakers were David G. Grillbortzer, president of the Washington Floral Company; J. Harper Hetherington, manager of the Fourteenth Street Store of that company; William F. and Adolph Gude, of Gude Bros.; Captain James, of the British Army and Z. D. Blackistone.

Mr. Hetherington was in charge of transportation arrangements and the commissary, while Mr. Grillbortzer

looked after things in Alexandria. The latter delivered a few words of welcome and then urged that all of the florists do their utmost to make the coming convention and show of the American Carnation Society a success. The guests pledged their co-operation and gave a rising vote of thanks to Mr. Grillbortzer and to Mr. Hetherington for the excellence of the entertainment.

MICHIGAN QUARANTINE

The state of Michigan has placed a quarantine order against corn and a large number of plants from New England on account of the European corn borer, but has specifically excluded the corms of gladioli and the tubers of dahlias without stems, as has the Federal Horticultural Board.

RAMBLING OBSERVATIONS OF A ROVING GARDENER

With the increasing attention which is being given to garden refinements, more interest is being shown in dwarf border plants and in edgings. This applies not only to the kinds of flowers and plants chosen, but also to the manner in which they are used. I think it must be admitted that English gardeners are far ahead of those in this country in matters of this kind. It is with pleasure, therefore, that I give here the results of experiments made over several years by Mr. W. Robinson, long known as one of the most expert British gardeners, and chronicled in *Gardening Illustrated*. Some of the plants mentioned by him are not very suitable for use in New England gardens, but most of those included in the list here given will thrive in this climate. What is said from here on is in Mr. Robinson's words:

In my youth I saw many miles of Box edgings being clipped, and also endless labor bestowed on the clipping of Yews for hedges—a mean, wasteful work for the most part, and often done at a season when good work might have been done. This was the sort of plan of work shown in the old garden designs, which might well be mistaken for patterns on a wall. When I had a garden of my own I made up my mind to stop all such waste and ugliness, and so got some old York stone paving, which, broken up, made edgings to last for hundreds of years. Also, I had in the place rough sandstone rock, which gave bolder edgings for rougher shrubs. Given these stone edgings, I enjoyed much beautiful life of alpine and rock plants, which seemed to like the edging-stone as much as in any rock garden. In this way may be grown numbers of beautiful plants, which, though not in place in the bed itself, will give an added grace of color and flower.

The Wall Hairbell (*Campanula muralis*).—Of all the things used, this is the most long-lived and useful. Other Hairbells of the mountains and Alps are difficult to grow, and even in careful hands are lost, but this lovely Hairbell is difficult to kill. It creeps up rocks, and even penetrates walls. This has been my best edging plant, flowering for years, and so densely that the number of bells in one foot of the line could not be counted.

Australian Everlasting (*Helichrysum bellidifolius*).—A newly come

plant, this surprises me by its fitness for the work, being dwarf, abundant in bloom, and free-growing anywhere on walls and as an edging.

Rocky Mountain Phlox (*P. subulata* and other dwarf kinds).—I have had these for many years now on the top of a dry stone wall dividing the lower garden from the rising ground, and their fine colors and other qualities have pleased me well in groups, which last for years in good health. Quick to grow, they are among the good edging plants that help to keep down the weeds.

Gauze Plant (*Gypsophila repens*).—Of all I have tried, this has been the best as to endurance, being good in color and long in bloom. It has been more than ten years in one edging without it ever showing any sign of weakness. It flowers all through the summer and right into the autumn, and is a great gain. The pink variety is just as useful as the white. Sometimes other plants, as the wall Hairbell, stray into it, and that is an added charm.

The Dwarf Lavender.—Of my edgings none meets with more approval than the Dwarf Lavender. It is not only more compact than the usual forms, but the flowers are of a deeper color. The Lavender, growing and seeding freely over a vast area on the warmer slopes of the Alps and in many lands around the great sea, varies much, and to that habit we owe

this and other forms. The Dwarf Lavender makes a neat edging in the fruit or kitchen garden where the large forms might be in the way.

Mountain Sandwort (*Arenaria montana*).—This very fine rock plant makes the loveliest edging of the bold kind that one could desire. Put over a line of sandstone blocks it flowered very beautifully, and is, so planted, very well fitted as a frame for shrubs. It is perfectly hardy and long-enduring.

Tufted Pansies (hybrids of *Violas*).—A fascinating host of these, of simple and often exquisite colors, makes lovely margins to flower-beds of roses or other favorite plants. Easy of increase and culture in cool soils, and best in the cool northern hill land, many fine kinds, like John Quarton and Lady Knox, are well known. This should not prevent us raising from seed, as in that way we get vigorous plants to form edgings or carpets, and may chance to raise a good thing now and then. In that case choose seed of the smaller race rather than the showy garish pansy.

An Alpine Toadflax (*Linaria pallida*).—A modest, patient, and delightful little creeper in and out of the stone edging, always increasing and always in flower bordering the Carnation bed or other not robust plants as it is so very dwarf. It is easy of increase as if it enjoyed the garden.

Pinks (*Dianthus plumarius*).—The welcome fragrance and pretty gray color of these make them welcome as edgings, and they often give us good effects. In my soil they are not so enduring as on calcareous or free, sandy soil. The Maiden Pink (*Dianthus deltoides*) is a hardy and bright-flowering

'Rock Garden Along a Path

plant used with some effect, but the season of bloom is not long. In its vast family in northern and alpine lands there may be some free and hardy enough to make an edging in the choicest flower-bed.

Purple Rock-Cress (Aubrietia).—Of the multitude of rock and alpine plants that come to these islands, this is distinctly the most useful, growing on walls, rocks, and wherever a few grains of it are sown. Edgings formed with it are beautiful in every way, those best made of rich purple kinds. At one time different Latin names were given to the forms of the plant, but they are all varieties of one mother plant, though varying much in lovely color, and all as hardy as the Dock. Their flowering season is very early and very long—usually three months—which is a great advantage. The growth is so dense that the plants are able to keep free of weeds, and edgings made with them will endure for years.

Rockfoils (Saxifraga).—The mossy kinds grow freely in cool soil, but are apt to perish in a dry one, and, therefore, are only useful in shade. The Silvery Rockfoils I used with good result, but these are apt to get patchy in time, and the flowers are rather in the way. Yet I am grateful to them, for silvery bells of the Aizoon group often carried me through before getting so keen on the plants that grace the beds with their flowers all the summer. The great Indian Rockfoils have a different use.

The Japanese Stonecrop (Sedum spectabile).—Long an admirer of this fine, tall Stonecrop, I tried it around a mass of Rhododendrons and other bold shrubs, and there it thrived and made a lovely belt of color every autumn for over twenty years. But in war-time the shrubs began to encroach and the unmown grass to come in, and so with regret we had to change it.

The Carpathian Hairbell (C. carpatica).—There are several good forms of this fine plant, a white and delicate intermediate color, between white and blue. All mixed formed an attractive edging to a bed of Rose Zephirin on its own roots. A good perennial, may it remain long at its post.

Hepatica (Anemone Hepatica).—Often too scarce for edgings, and often seen as poor forgotten dots, I have at last taken courage and made some edgings of it in the past fine October days. But as it has a poor chance in the open sun, it is used to border the paths under the pergola, where the shade, it is hoped, will be right for its health and endurance. The plants are all of the wild blue kind, never having seen any of the

double kinds or other variations so pretty.

LETTER FROM AMMANN.

He Tells About the Progress of the American Flower Growers' Association.

February 27, 1920.

March 17 and 18, the Committee on Constitution and By-Laws for the National Growers' Association will meet in New York. We will appreciate suggestions anyone has to offer. Write them to the undersigned.

Immediately after Easter I shall be ready to visit any community and assist in organizing a local organization. Write so that dates may be agreed upon. We shall not encourage the organizing of locals with a membership of less than twenty-five.

Let us take time by the forelock and organize as many locals as we can prior to the big National Meeting at Cleveland in August.

Illinois already has one local with 100 members, and we expect in the near future, to organize two more locals. So, get busy, you other states, write the undersigned and let us help you.

Why You Need a National Growers' Organization—Because:

It will constantly work for your interests as a flower grower.

It will elevate the flower business in general and make it both more pleasant and profitable.

It will safeguard your heavy investments in an extremely hazardous business.

It will afford protection from unjust, unfair and harmful legislation.

It will assist you in the production of high grade flowers and plants.

It will remove the drudgery of the grower.

Its activities will procure prices for

a grower's products commensurate with the chances he takes.

It will help you to solve many perplexing problems.

It will extend the demand for your products.

It will minimize the annual waste of flowers.

Why the National Growers' Organization Needs You—Because:

With you the organization is stronger than without you.

Your experience will be a valuable asset.

Team work is a necessity always.

More abuses in the trade can be corrected with your assistance.

Meetings are of greater value when many participate.

We live but a short time, so let's make the most of it.

Your financial support will permit the organization to extend its activities.

The more intelligence assembled, the greater the force.

In unity there is strength.

It will add one more booster for better conditions in the trade.

Your interests are common with those of many others.

RHODE ISLAND NURSERYMEN

Providence, R. I.—Asserting that not one cent has been appropriated by the state for the benefit of nurserymen here, while other states expend large sums, the Rhode Island Nurserymen's Association unanimously voted to ask the legislature for \$2,500 to properly inspect and supervise "cleaning up" work in the nurseries.

The following new members were elected: L. F. Kinney, Kingston; W. H. Hollinsworth, Providence; H. H. De Wildt, Providence; Lawrence Hay, East Providence; E. Leemery, Woonsocket; Thomas Shaw, Forestdale; Herman Dolbeck, Woonsocket; Percy Sherman, Portsmouth, and August Ourade, Narragansett Pier.

The following officers were elected for the ensuing year: President, C. W. Morey of Woonsocket; vice-president, Walter Barth of Newport; secretary,

D. A. Clarke of Fiskeville; treasurer, V. A. Vanicek of Newport; executive committee, H. H. De Wildt of Providence, C. M. Holland of Woonsocket and William A. Hollingsworth of Providence.

Paul V. Fortmiller in discussing the "Present and Future Demand of Nursery Stock," called attention to the fact that conditions at the present time are different from any previous season, foremost of which is the shortage of nursery stock. He explained this shortage because of unusually large demand for nursery stock that has been created by so many workmen who through the greatly increased wages have purchased their own homes and are now beautifying their places. Another reason for the shortage was because of the lack of labor during the war, which curtailed the production of stock. The quarantine also has contributed to the shortages.

SULPHURIC ACID FOR SWEET PEAS

It Has Proved an Effective Aid to Germination.

In the English Sweet Pea annual for 1920 Mr. T. A. Weston writes very interestingly about the use of sulphuric acid as an aid to germination. He says:

Prior to the discovery that some Sweet Pea seeds were particularly hard and almost impervious to moisture, many seeds were sown which never appeared, or at least were so slow in germinating that they were given up as lost. Prior to the days of the Spencers, seed for the most part was very cheap, and it was only when the rage for novelties developed that growers realized how difficult some seeds were to germinate. In later years varieties came into commerce that gave a percentage of seed so hard that months in the soil had no effect. The trouble was not wholly connected with the Spencer varieties.

With the chipping treatment growers were able to ensure a quick and even germination of their Sweet Pea. It was a fairly easy plan for the amateur. For the trade grower, who handled seed by the pound, it was by no means a joke, but with new and expensive varieties there was no alternative, until the acid treatment was discovered.

It is some years since I first made known in a gardening contemporary the sulphuric acid method of treating seed, which gives equally good and perhaps better results than chipping, without the latter's difficulties. The treatment may be applied to all varieties, but split seeds should not be subjected to it.

The discovery was hit upon more or less by accident, when experiments were made with a view to discovering whether sterilization of seed would be helpful against rot, etc. Most growers have experienced the rotting off trouble, and some years ago a worker at one of the American Universities set out to circumvent this and many other Sweet Pea diseases, "Streak" included. On the latter subject I had considerable correspondence with him, even supplying him with materials. We found no real cure for "Streak," but the acid treatment of seed was one discovery of importance.

At one time I had the impression that the darkest colored seeds were the hardest, but many tests disproved this, inasmuch that even white seeds will remain dormant over long periods. I have found seeds of King White, own saved, absolutely unchanged after 24 days sown in a slightly heated pit.

When writing to advertisers kindly mention **HORTICULTURE**

The worst sinner, however, was a specially good pink selection I made from Money-maker. Not anticipating trouble, I sowed three hundred and nine seeds on October 18th without treatment. Twenty days later, finding only six above the soil, I made an examination, and in the end had to earth out the entire batch. Two hundred and sixty-six were absolutely flint, the remainder either just chitting or swelled. The cuticle of the dormant ones so strongly resisted the knife, that I decided to give them 30 minutes in acid. Four days after resowing every seed I examined had emitted its rootlet.

The treatment is simplicity itself. Turn the seed into a pan or dish, and pour over it sufficient sulphuric acid, full strength, to wet the whole when well stirred. If desired, cover entirely with acid. The safety line for the hardest seed is 30 minutes. Some will stand more, but one hour will kill practically every seed. My own experience is that the greyish stony looking seeds are the toughest, and thirty minutes is their portion. Between 15 and 30 minutes is effective for brown to black, whilst 10 minutes is a safe period for white and mottled seed such as the lavender varieties give. This season, having all home saved seed, I gave the R. F. Felton seed only five minutes, and the same for white seed. The hard unswollen examples in the untreated King White, however, suggest that 10 to 15 minutes can be administered, but all splits should be removed. After soaking, which, by the way, shows no visible effect, wash the seed thoroughly in several changes of water and lay out until sufficiently dry to make sowing easy. The acid can, of course, be used time after time. It is easy to pour it off into another pan, so that several lots may be under way. Only earthenware pans must be used, the ordinary clay seed pan being quite suitable.

HORTICULTURAL SOCIETY OF NEW YORK

A lecture on "Rose Gardens" will be delivered on Wednesday, March 17th, 8.15 p. m., at the American Museum of Natural History, 77th street and Central Park West, at a meeting of the society to be held on that date. The lecture is by Mr. Edmund M. Mills, president of the Syracuse Rose Society, an enthusiastic amateur grower of roses for over forty years. He will have much to tell us about the rose and its culture, and those who do not attend will be missing a great opportunity. An invitation is extended to all to attend. There is no admission charge to the lecture.

THE BOILER OF Unequalled Fuel Economy

Kroeschell Boilers, the best by test since 1879. Forty years' experience.

THE QUALITY PLACE OF BOSTON

Regarding the Kroeschell, it is the best we have ever had and satisfactory beyond our expectations. It heats up especially quick and has saved us considerably already in the price of fuel. When we are in need of another boiler we will give the Kroeschell the first consideration.

(Signed) WM. W. EDGAR CO.,

When You Buy—Get a Kroeschell

2,016,286 sq. ft. of glass was equipped with Kroeschell Boilers during the year of 1916.

OHIO'S CELEBRATED CYCLAMEN SPECIALIST

After using your No. 12 Kroeschell Boiler I came to the conclusion that had I to install more boilers it would be the Kroeschell and no other. It really is a pleasure to heat, no trouble to get the desired heat in a very short time.

(Signed) CHRIST. WINTERICH,
DEFIANCE, OHIO.

George Watson's Corner

"You in your small corner and me in mine."

Alfred M. Campbell extends a cordial invitation to visit his place at Strafford just now and see the finest block of Easter Lilies in this part of the country. It is none too early for the storemen to be looking around and making their arrangements on this great specialty for the coming holiday and Mr. Campbell's fame as a successful grower of it is now well established. He is also strong on Hydrangeas and several other standbys.

Hush! Tell it not in Gath. Another atrocity. The boys have quieted down a bit on the billboard matter, but I was up in the Pennock Market today and overheard a Fishtown florist asking for green dye. Now we'll be having to go around the other way to avoid the awful green carnation. If good old St. Patrick were alive today he'd sure excommunicate for that kind of villainy.

Many florists outside of Philadelphia will be sorry to hear of the death of Charles H. Eimerman, which occurred Feb. 29th. He was a prominent member of the legal profession and for over twenty years took an active interest in the doings of the Florists' Club, of which he was an associate member. He was a keen bowler and an expert at shuffleboard and was generally well up towards the top whenever there was a tournament. While small in stature he was "all there" physically and very much of a man. He numbered among his legal clients many men prominent in our business, among them the late William K. Harris, who remained his bosom friend to the last. In early life he entered Girard College, that famous institution for orphan boys, and graduated from there with the highest honors. He was 59 years of age, a member of the Union League and many other societies.

My old friend Bill Baker was tendered a surprise party at his home in Philadelphia, March 1st. The supper was followed by a dance and there were a few speeches and some merry-makings generally in the course of the evening. The presentation from his old friends took the form of a gold mounted French briar and a big can of the finest Umpty Ump mixture. Also a silk American flag. The chief conspirators in planning the program were William Crawford and Miss Mary Baker. Among those present were Bart Cartledge, Bob Kift, Charley Kahler, Ben Starkey, Gene Bernheimer and other old friends of the family. A very pleasant and merry evening was spent, and our old friend, who carries his eighty years with great sprightliness, was made happy by seeing others happy, and felt quite swelled up—as he had a good right to be. Long life to him.

BOSTON.

The passing of John Charles Olmsted, the landscape architect, has been learned with deep regret. Mr. Olmsted, who was long associated with the late Frederick Law Olmsted, has done much very important work throughout the country.

Mr. James J. Casey, proprietor of the Rosary Flower store at Copley Square was married recently to Miss Minnie E. O'Brien of Quincy.

For the past two weeks or more Penn the Florist has kept crowds of people in front of his windows by a most gorgeous display of decorated weeds. These novelties, which are being put out by a Chicago firm, include a great number of common field and garden weeds as well as other wild plants, all of them painted or otherwise colored so as to produce most remarkable tints and shades. Penn is using them very lavishly, and as few people in Boston ever saw them before, they naturally arouse a great amount of curiosity as well as admiration. They have sold well, too, and are capable of being used in a great many ways as a supplement to flowers.

The company which is to be formed by the merger of the Boston Floral Supply Co. and the B. A. Snyder Co. will be known as the Boston Floral Supply & Snyder Co.

MANDA ORCHIDS SHOWN IN BOSTON

Joseph Manda of West Orange, N. J., showed 20 vases of cut orchid blooms at Horticultural Hall, Boston, where an illustrated lecture, the first of a series on "The Living Plant," was given by Prof. W. J. V. Osterhaut, professor of botany in Harvard, last Saturday afternoon. With the aid of lantern slides, the speaker described the requirements for successful germination and the forces which direct the root in its search for food and water.

Two exhibits in the Manda collection which attracted much attention were cut blooms of the brasso-cattleya *Leemaniae*, one a fine yellow and the other a beautiful greenish-yellow, the blossoms measuring several inches across. Other specimens of this variety were *Thorntonii*, *Veitchii* and the large-flowered *Marie*. Of *Cattleya Schoederiae* there were fine specimens of *Veronica* and the richly-colored *Victory*. A striking specimen was the *laelio-cattleya Arcturus*, with a combination of brilliant purple and burnt orange colors.

Of *cattleya trianae* there was a fine specimen of the new variety, *Mrs. E. Warren Hood*, of a pale lavender tint, the throat of yellow and the lip of rose purple and lavender.

FERNS

THE VICTORY FERN (*Nephrolepis victoria*)

We take pleasure in offering this new and valuable variety of *Nephrolepis*. It is a beautifully crested form of "Teddy, Jr." with fronds frequently subdivided on the ends, making a most unique, distinct, and desirable variety.

This fern was

AWARDED A BRONZE MEDAL

at the S. A. F. Convention at Detroit in August, 1919. The judges of the award reported as follows: "Special stress is laid on the new fern Victory, with a rapid growth and a branching at end of fronds, making it a shapely plant. It should be a commercial success, and we **RECOMMEND IT MOST HIGHLY.**"

Strong plants, 2½-inch pots.....\$3.00 per dozen, \$20.00 per 100
Strong plants, 3½-inch pots..... 7.50 per dozen, 50.00 per 100
Extra fine specimens: 8-inch, \$3.00; 10-inch, \$5.00; 12-inch, \$7.50

NEPHROLEPIS:

Elegantissima, elegantissima compacta, 3½-inch.....	Each \$0.25
Elegantissima and elegantissima compacta, 6-inch.....	.75
Muscosa, 5-inch.....	.75
Elegantissima and elegantissima compacta, 8-inch.....	2.00
Elegantissima and elegantissima compacta, 10-inch.....	4.00
Harrisii, 8-inch.....	3.00
Dwarf, Boston, 8-inch.....	2.00

If plants are shipped in pots, 10% additional.

F. R. PIERSON, Tarrytown, N. Y.

FERNS

We have on hand for immediate shipment a splendid lot of **Pot Grown Ferns.** All extra good value for the money. Shipped without pots.

NATIONAL PUBLICITY CAMPAIGN.

When the far reaching results of our Campaign are not noticeable as to promote interest such as is shown in the following letter, it is time that the large body of florists who have not yet subscribed to our Campaign Fund should appreciate what is being done for them.

Corp. of CHAS. F. MEYER,
99 Warren St., New York.

March 2, 1920.

John Young, Secy.

National Publicity Campaign.

Dear Sir:—On my recent trip South and West I took particular notice of the Publicity Campaign and was much gratified and pleased to see the good impression it made upon the public, and its beneficial results to the trade. Indeed, the slogan, "Say it with flowers," expresses so much in all conditions of life, be it love, friendship, sickness, death, etc., that it has taken a strong hold on the public, and I really believe that the increased demand in flowers is to a large extent owing to it and the advertising in general. All of which impressed me very much and made me feel that the advertising crusade ought to be supported liberally. So when I reached Omaha and dropped in to see Mr. Hess, of Hess & Swoboda, he easily detected the weak spot in my armor and neatly extracted a promise from me of a further contribution to the fund on the part of my firm. Therefore, you will please find enclosed check of my firm for \$100.00 as an additional contribution to the Publicity Campaign, and hoping that it will help the good cause along. I remain

Yours very truly,

CHAS. F. MEYER.

President of Corp. of Chas F. Meyer.

Our slogan is, undoubtedly, forcing its way rapidly into the public mind. It is not a mere jumble of words, as most other trade slogans are, it is straight to the point with its message, and permits of no misunderstanding. Hardly a day passes when there is not received at the Secretary's office some proof of its reception by the public.

Of late the cartoonists on the big newspapers seem to have taken it up, and we receive many clippings showing its use. All this is publicity, and its great value is fully recognized.

We sometime ago were advised that a proper appraisal of our slogan's value would be a million dollars, but

RACINE, WIS.

It is safe to say now that it is worth to us a great deal more. It should be remembered, though that this great asset would speedily fade away if the slogan were allowed to fall into disuse. Only by using it continually can we maintain its value, and to assure this we must have the money to carry along our Campaign.

And, all things considered, it is such a little we ask. We have been going along on the volunteer system of contributing, which many of our staunchest supporters declare to be a wrong procedure. But we did hope, and hope still, that it will serve our purpose. We never for one moment thought that a wideawake florist would be a "slacker," but if we are to judge our returns so far, there is a big army of slackers, and we are quite sure that the majority of those in this army do not really want to be there. Either they do not understand our Campaign, or they are negligently putting off the writing of a cheque with the thought that any time will do. They are wrong. We need their support now, right at this very time. Our Publicity Committee have struggled along in the face of great difficulties for the want of money—ready money—to work with. They have often incurred liabilities in anticipation of being able to meet them from our collections, and have come through, as a member of the committee expresses it, "by the skin of our teeth." All this anxiety you, Messrs. Non-Subscribers, can relieve or prevent. This Committee is working for you, for your interests, for your prosperity. Will you not pay their way, at least in the proportion that you would pay for a trifling service, which is all they ask. Your share of the expense is within your own estimate. You can make it five dollars if you please, or as much more as you wish. If you only do a \$5,000 business, a five dollar contribution would amount to just one-tenth of one per cent. Can you afford it? Certainly, you can—it is hardly the cost of a box of cigars.

The Publicity Campaign is conceded to be the best thing ever promoted in the interests of florists. Support it and you support your own enterprise.

JOHN YOUNG, Secy

1170 Broadway, New York

A. F. Keenan & Co., of Chicago, have filed a petition in bankruptcy, with the object of securing legal release from liabilities contracted several years ago. Mr. Keenan has been in the army service, and hopes to again enter the flower trade. A discharge has been asked and a hearing set for April 12.

Vol. XXXI

MARCH 13, 1920

No. 11

THE TALK OF THE TRADE

Some time ago I wrote about the popularity of forced lilacs in Philadelphia. I find that they are also in favor in parts of the west. Possibly they are not quite so common in the stores as in Philadelphia, but florists make generous use of them. Samuel Murray said to me recently:

"We have grown lilacs for many years. It is true that we do not sell a great many plants, but we use the flowers in corsage bouquets with cattleyas, and in general floral work. We have always been able to work them up to good advantage. Unfortunately they have been rather poor this year."

Mr. Murray is very proud of his splendid group of nectarines. Altogether he has eighteen good sized plants in tubs, and they attract much attention, as they are now in full bloom. It is easy to see that Mr. Murray finds great enjoyment in growing these plants. He said with enthusiasm:

"It does my heart good to look at them, and they are worth all their cost and care."

Last year the crop of nectarines produced were excellent in flavor, as several of the store's good customers have reason to remember. Mr. Murray is liberal in distributing the fruit, and says that the nectarines prove an excellent advertisement for him.

Apparently Easter lilies are more abundant in some parts of the West than in many eastern cities. Mr. Murray, in any event, says that while they were very short last year, he will have plenty of lilies this season, and that they are the best he has grown for years. Altogether Mr. Murray, this veteran florist of Kansas City, deserves the congratulations of his friends, for he says that he has never been in better health and that business up to Lent this year was the best in his history.

An advertisement from the Horticultural Advertiser (England) contains a possible pointer for growers in this country who have novelties or improved varieties to put on the market and want to let people know

about them without much trouble. It reads:

"The king of early forcing daffodils is coming to show himself to the British nurserymen and seedsmen."

It then goes on to say that on certain days a representative of A. Philippi & Sons, of Hillegom, Holland, will be at Covent Garden Market and also in Williamson's Hotel to introduce this new flower, which is described as the best of all good varieties. How easy it would be for American growers to announce that a similar exhibit would be given at a stated time at any wholesale market in Philadelphia, Boston, New York, Baltimore, or Washington, or at similar places in other cities.

Apparently florists are not planting nearly so many gladiolus bulbs as

usual for forcing this season. No doubt this is due to the high prices being charged for the bulbs. After all, though, these prices seem higher than they really are because of the sharp contrast to those which prevailed while the war was on. It is only a few years ago that florists paid fifty cents apiece for bulbs of America, although of course they did not grow them in any extensive way. After awhile America was selling for fifty cents a dozen, then dropped to thirty cents, and before the end of the war could be bought for ten to fifteen cents a dozen. There is every reason to believe that the growers will get their money back, for the blossoms will come at a time when they will be needed.

It is well that the list of florists' varieties is being somewhat extended. Of course the old time favorites con-

Madam Mouillere, One of the Best French Hydrangeas

tinue to sell in greatest numbers. Everybody knows America and buys it, although as a matter of fact there are other better kinds for forcing, as for example, *Glory of Holland*. To be sure the latter is classed as white with a slight tinting of pink, but America usually comes pretty light when forced under glass. A considerable per cent. of Americas are pretty apt to come blind, which is a disadvantage not possessed by some of the other kinds.

Brenchleyensis, one of the first kinds to be forced, would still be grown very widely if the bulbs could be obtained freely. Its name insures its sale, and yet it, too, is distinctly inferior to other kinds for forcing, although this much should be said to its credit—almost every bud opens, indoors or out.

One of the now popular forcing varieties, *Halley*, can hardly be improved upon, although it doesn't sell as well as it should. Likewise *Panama*, *Peace* and *Augusta* are extra good florists' flowers. Mr. B. Hammond Tracy has selected a number of others which he considers of great value to the florist for commercial purposes, the list including *Chicago White*, *Dawn*, a fine color pink with good keeping qualities, *Delice*, which is forced quickly, *Independence*, a brilliant begonia-pink flower, *Lily White*, which Mr. Meader of Dover bought from Kunderd and is featuring, *May*, white lightly flecked with crimson, *Myrtle*, clear delicate rose pink, *Niagara*, yellow, and *Willie Wigman*, blush.

Like many of the growers, Mr. Tracy is putting out a new white, although it is not likely to be taken up by florists at present, as the bulbs cost five dollars each. This variety is called *Madonna*, and is pure white even to the anthers, while most of the so-called whites have some other tints. According to Mr. Tracy many of the florists do not know how to grow gladioli under glass to best advantage. For one thing they often do not plant the bulbs deeply enough. The right depth, he says, is about four inches, although six inches is none too deep in the open ground. The need of keeping the ground moist is sometimes overlooked, too. Another mistake sometimes made is expecting to get the best flowers from the biggest bulbs. Oftentimes moderate sized bulbs if perfectly sound give unsurpassed blooms.

It is very pleasing to note the interest shown by the growers in general around Boston in the formation of the proposed National Growers' Associa-

tion. As you all know, the work in connection with this association is now in the hands of a committee and this committee will report at the S. A. F. convention in Cleveland next August and definite plans will be placed before the growers and an association permanently formed with by-laws and officers elected and a grand start is expected.

There is no question that this association will be of great value to the growers and florists around Boston, and they are looking forward to the time when our ex-president, J. Fred Ammann, will visit Boston and assist in the formation of a local branch. Mr. Ammann is covering the country in this work and is coming here from New York where he will be in attendance at the International Flower Show. Full particulars and information will be given the Massachusetts florists as to the formation of this local branch and it is advisable for one and all to attend that meeting, which will probably be held March 23d. Arrangements are not yet completed, but enough has been done and we can assure Mr. Ammann of a big attendance when everyone can hear his plans and fortunately be able to take advantage of work that has previously been done in other sections where many difficulties have been ironed out. Everything is going along smoothly now the formation of this association is assured.

THE EASTER OUTLOOK.

There is every reason to believe that baskets are going to be just as high in favor at Easter as they were at Christmas time. Many of the most progressive retailers are planning to use these baskets in great numbers because by their aid it is possible to satisfy a customer with smaller plants and fewer flowers. Mr. Henry Robinson, one of the largest wholesalers and manufacturers in the East, says that he is having an unprecedented demand for these baskets this year, and that probably thousands will go out from his establishment alone. There are many plants which look well in baskets but *Genistas* can be handled to especial advantage in this way. Retailers selling *genistas*, though, should take pains to instruct their customers as to their care if they want the results to be satisfactory. In ordinary rooms *genistas* are prone to drop their flowers very quickly, but if the plants are kept in a cool room and the roots kept moist, the flowers will last fairly well. If you by any chance have *spiraeas* for sale, tell your customer to keep water standing in the saucer under the plant as long as the flowers exist. This is the one great secret of keeping the *spiraeas*

in bloom for a satisfactory length of time. You might also tell your customer that the plant may be set out in the garden when spring comes.

Probably you have noticed a distinct tendency away from red roses of the climbing type at Easter and in favor of pink and white sorts. This means that the day of the *Crimson Rambler* is over, although it is still sold to some extent. Dorothy Perkins, *Tausendschon* and such *Baby Ramblers* as Mrs. Cutbush, Ellen Poulsen and *Baby Dorothy*, make most delightful bushy plants which sell freely. Of the other roses, *Magna Charta* and *Frau Karl Druschki* remain high in popularity. Ulrich Brunner and Mrs. John Laing have sold well in recent years. Take care to have these large flowered roses timed so that the blossoms will not be full blown. Customers like them when they are just showing color.

Apparently the French hydrangea will go far towards taking the place of Azaleas. Perhaps it will help their sale if you explain to your customers that they were originated in the famous Lemoine Nurseries at Nancy, France, where the American soldier first went into the front line trenches, and that for a long time American guns stood between these nurseries and destruction. Fortunately French hydrangeas are not hard to handle, and there is a good stock on hand.

With Easter coming early, it will not be difficult to have a good stock of bulbous plants ready, and they always sell well at Easter. The enterprising florist, therefore, will arrange early for a wide and varied stock of plants and have the store filled to overflowing when the call comes.

NEW ORCHID SOCIETY.

A Meeting to Be Held in Boston During the Show.

It is believed that the occasion of the big orchid show in Boston, from March 24 to 28, will offer an excellent opportunity for the formation of a National Orchid Society. For some time orchid growers have felt that such an organization was needed, and there seems to be no reason why an orchid society should not be as successful as the *Dahlia Society* or the *Peony Society*. It is expected that a large number of those interested in orchid culture, including some of the most prominent growers in the country, will attend the show, and a meeting to discuss organization has been called for Thursday evening, March 25, at 7.30 o'clock at Horticultural Hall. If the representation is as large as the originators of the movement hope, the society will come into existence at once.

DREER'S CANNAS

This season we harvested the finest and largest crop of Cannas that we have ever grown.

KING HUMBERT

And all the other good varieties you should have are included in our list and the roots are heavy and firm.

PRICES: The prices quoted are for dormant roots, which can usually be supplied until about the first of April, after which pot plants will be sent out and in which the advance in price will be as follows: All varieties listed at \$7.00 or less per 100 will be supplied in pot plants at \$8.00 per 100 or \$70.00 per 1000, and on varieties listed above \$7.00 per 100 there will be no change in price between dormant roots and pot plants.

All have green foliage unless otherwise specified.

TWELVE SPECIAL VARIETIES

Carmine Beauty. Deep bright carmine flowers freely produced high above the heavy dark-green foliage which has a narrow red margin. $4\frac{1}{2}$ ft. 15 cts. each; \$1.50 per doz.; \$10.00 per 100; \$90.00 per 1000

Cheerfulness. No more appropriate name could be given to this brilliant novelty. Its beautiful bright fire-red or deep orange flowers appear early and continue without interruption until frost. Add to the prevailing color a golden border and center with each petal flaked carmine-crimson and you may form some conception of this fascinating variety. $3\frac{1}{2}$ ft. 10 cts. each; 85 cts. per doz.; \$6.00 per 100; \$50.00 per 1000.

City of Portland. A wonderful bright rosy-pink, much deeper in color than Mrs. Alfred Conard or Hungaria; a free-flowering, vigorous grower. $3\frac{1}{2}$ ft. 20 cts. each; \$2.00 per doz.; \$12.00 per 100; \$100.00 per 1000.

Fairy Queen. The dwarf, compact plants of this distinct novelty are covered with flowers from spring until fall. The plant rarely exceeds 3 feet in height. The flowers, of a clear rose-pink, are of medium size, good substance and borne upright on stout stems in great abundance. Each flower has a distinct cream-colored border.

We believe Fairy Queen will become one of the very popular Cannas. 60 cts. each; \$6.00 per doz.; \$50.00 per 100.

Flag of Truce. A large-flowered, creamy white with faint pink dots on each petal. The general effect is white. Not as white

nor as tall as Eureka, but quite distinct and valuable. 4 ft. 35 cts. each; \$3.50 per doz.; \$20.00 per 100.

Golden Eagle. A wonderful clear golden-yellow of free, upright growth. The flowers are produced in large clusters well above the foliage. 4 ft. 35 cts. each; \$3.50 per doz.; \$20.00 per 100.

Harmony. Great clusters of good-sized, well-formed Geranium red flowers are arranged on good stems in such a manner as to give the trusses an almost globular appearance. $3\frac{1}{2}$ ft. 20 cts. each; \$2.00 per doz.; \$15.00 per 100.

Pocahontas. (Bronze-leaved Olympic). Large oriental-red flowers borne on firm upright stems, just high enough above the foliage to show the entire head. The foliage is a dark bronze-green with emerald shadings; the ribs a darker bronze. 4 ft. 20 cts. each; \$2.00 per doz.; \$15.00 per 100; \$100.00 per 1000.

Poppy. Intense poppy-red. Large perfect florets in good trusses over greenish-bronzy foliage. Rich and effective. 5 ft. 20 cts. each; \$2.00 per doz.; \$10.00 per 100; \$90.00 per 1000.

Remarkable. This effective bronze-leaved variety stands out boldly among other sorts, not only on account of its height (6 ft.), but because of the beautiful scarlet-carmine trusses of bloom surmounting the rich green-bronze foliage. 20 cts. each; \$2.00 per doz.; \$10.00 per 100; \$90.00 per 1000.

Surprise. The brightest red Canna we have. It surpasses in brilliancy such popular varieties as Meteor and Lafayette and produces its great trusses with equal freedom. 4 to 5 ft. 35 cts. each; \$3.50 per doz.; \$25.00 per 100.

DREER'S SELECTED CANNAS

Including many comparatively new varieties, which we can offer in quantity at popular prices.

	Doz.	100	1000
Allemania (Orchid Flowered). Salmon with golden markings; 5 ft.....	\$0 50	\$3 50	\$30 00
Austria (Orchid Flowered). Large, pure canary-yellow with reddish dots in center of upper petals; 5 ft.....	50	3 50	30 00
Beacon. Rich cardinal-red; $3\frac{1}{2}$ ft.....	1 00	7 00	60 00
Brilliant. Rich yellow with two red petals; $3\frac{1}{2}$ ft.	50	3 50	30 00
Dazzler. One of the best, deep fire-red, very free; $3\frac{1}{2}$ ft.....	1 00	7 00	60 00
Dragon. Very rich dark, ox-blood red; 3 ft..	75	5 00	40 00
Dr. E. Ackerknecht. Carmine lake, suffused with deep carmine, bronze foliage; 4 ft.....	50	3 50	30 00
Duke of Marlboro. An attractive deep brilliant crimson; 4 ft.....	50	3 50	30 00
Favorite. This is the best red spotted yellow Canna yet introduced. The color is a rich, deep golden-yellow, the flowers are produced on strong stems well above the foliage; 5 ft.....	50	3 50	30 00
Gaiety. Reddish-orange mottled with carmine and edged with yellow. The tongue is yellow and densely spotted with carmine; $4\frac{1}{2}$ ft.	50	3 50	30 00
Garam. Very large bright carmine-red flowers, freely produced; $3\frac{1}{2}$ to 4 ft.....	50	3 50	30 00
Gladiator. Deep yellow freely dotted with red, a popular bedder; $4\frac{1}{2}$ ft.....	50	3 50	30 00
Goethe. Very attractive. Bright deep orange flowers of a very penetrating shade; 4 ft..	85	6 00	50 00
Gold Bird (Oiseau d'Or). This is the yellow companion to Firebird; the immense soft canary-yellow flowers are of good substance; $4\frac{1}{2}$ ft.....	85	6 00	50 00
Golden Gate. Yellow and red; 4 ft.....	60	4 00	30 00
Italia (Orchid Flowered). Bright orange-scarlet, with broad golden-yellow border; 6 ft.	50	3 50	30 00
King Humbert (Orchid Flowered). The most popular Canna. Great orange-scarlet flowers surmount the vigorous dark bronze foliage throughout the season; 5 ft.....	75	5 00	45 00
Lafayette. In some respects resembles the variety "Meteor" but the flowers are not quite as dark, stands more erect and the plant grows taller; 5 ft.....	1 00	7 00	60 00
La France. Deep carmine pink; $4\frac{1}{2}$ ft.....	1 25	8 00	70 00
Lahnbeck. A free grower. The color is rose with lines and shadings of scarlet carmine hues, a narrow golden border adds to its beauty; 4 ft.....	85	6 00	50 00
Louis Reverchon. A splendid bedder, large cochineal-red flowers; $4\frac{1}{2}$ ft.....	80	4 00	35 00
Maid of Orleans. Rich cream ground, mottled and shaded soft pink; 4 ft.....	80	4 00	30 00
Mrs. Karl Kelsey (Orchid Flowered). Orange-scarlet, suffused and striped with yellow; 5 ft.	50	3 50	30 00

	Doz.	100	1000
Mrs. Woodrow Wilson. A rich but soft crimson-pink, with very large flowers, a robust grower and free bloomer, 4 ft.....	2 00	15 00	
Olympic. Rich Oriental-red, shading lighter to the centre and dappled carmine. The individual florets and trusses are very large and of excellent form; 5 ft.....	85	6 00	50 00
Panama. The color and markings of this splendid Canna are unusual; the rich orange-red face of the petals is bordered with a broad edge of golden-yellow; 5 ft.	60	4 00	35 00
Philadelphia. Rich deep red; 4 ft.....	60	4 00	35 00
Queen Charlotte. Rich pomegranate-red bordered with golden-yellow; 3 ft.....	55	6 00	50 00
Rosea Gigantea. Large flowers, borne in such abundance that the mass of color is amazing. A deep rich rose, almost a coral-carmine; 4 ft.....	1 25	8 00	70 00
Salmon Queen. Rosy salmon-scarlet, blending to a rosy carmine towards the centre, a very effective bedder; 5 ft.....	85	6 00	50 00
Scharfenstein. The beautifully formed, large round florets are produced in compact but graceful trusses. The color is a unique light red salmon with orange and carmine suffusions that forms a most attractive addition to the range of colors found in Cannas; 5 ft.....	85	6 00	50 00
Schopenhauer. A rich brilliant red with yellow throat, very free; 3 ft.....	75	5 00	40 00
Souv. de F. Langie. Very distinct orange-red color, edged with gold; $4\frac{1}{2}$ ft.....	75	5 00	40 00
Superb. Deep salmon with bronze foliage; $4\frac{1}{2}$ ft.	60	4 00	35 00
The Gem. An entirely distinct spotted variety. The immense trusses of flowers are borne on upright branching stems well above the foliage, and are of deep cream or straw-yellow, spotted with deep carmine; $4\frac{1}{2}$ ft.	1 50	10 00	90 00
Uhlberg. Entirely distinct, of a soft rosy-carmine; the throat of the flower is of a creamy-yellow, and the edges of the petals are also pale yellow; 3 ft.....	60	4 00	35 00
Venus. Flowers of fair size, of a soft rosy pink with a pretty mottled border of creamy-yellow; $3\frac{1}{2}$ ft.....	75	5 00	40 00
Winter's Colossal (Orchid Flowered). The largest flowered Canna. The florets often measure eight inches across and are of a bright scarlet; 5 ft.....	75	5 00	45 00
William Bates. A splendid free flowering yellow of good size; 5 ft.....	1 50	10 00	90 00
Wyoming (Orchid Flowered). Massive orange flowers which make a strong contrast with its rich bronze foliage; 6 ft.....	50	3 50	30 00
Yellow King Humbert (Orchid Flowered). A sport from King Humbert in which the foliage is green and the flowers yellow with red spots. Very attractive.....	75	5 00	45 00

To comply with a new Post Office requirement, when writing to HORTICULTURE, please use the following form:

HORTICULTURE, 78 Devonshire Street, Boston 9, Mass.

The city of Boston is divided into districts, and each district is numbered. If you will observe the number allotted to HORTICULTURE, it will facilitate the delivery of mail to this office.

At the last meeting of the Horticultural Club in Boston a matter came up in a joking way which the newspapers have taken seriously and given considerable prominence to. At that meeting a plea had come in from the Horticultural Society of the North of France for material to aid in replanting that war devastated land. It was stated that four thousand members of this society, including horticulturists, market gardeners and nurserymen, needed help. During the discussion Mr. John Farquhar arose and made a motion that Congress be petitioned to send France the seeds which have been prepared for congressional distribution in this country. Word has just come in that the Senate committee had refused this year to recommend the passage of the bill authorizing the usual distribution of government seeds. Mr. Farquhar's motion was put and carried in a spirit of joviality, everybody realizing that the annual distribution of seeds from Washington was nothing but a farce. The newspaper reporters, however, when they heard the story, took it seriously, with the result that one newspaper even published a lengthy editorial discussing the proposition.

As a matter of fact this very method of disposing of government seeds might well be considered in all seriousness. In any event the action of the Horticultural Club brought before the public the fact that France needs seeds badly and that seedsmen and others in this country have genuine opportunities to help their fellow workers over seas. There should be a generous response, but care should be taken not to send seeds which cannot be used. In northern France, for example, sweet corn, peppers and other long season crops cannot be grown successfully.

It isn't intended, though, that the shipments should be restricted to vegetable seeds. Flower seeds are wanted

just as badly. Cuttings and plants can be used, too. Even catalogues are desired, for that matter, so that the French people can buy what they want when they have the money.

At the meeting in Boston Mr. Farquhar immediately offered a collection of seeds; Mr. William Sim said that he would send over a generous amount of tomato seed; and others present who had no seeds to send dipped into their pockets and raised a total of over sixty dollars to buy seeds and plants of various kinds. Perhaps their generosity will prove an incentive to other organizations throughout the country. The Boston Post has found an opportunity for the exercise of considerable sentiment in this connection, as will be seen from the following quotation:

"The planting season will soon be here. American seeds would create a spirit of appreciation in rural France, not only when the sowing was going on but during the growing time and the harvest. And many a French grandfather may say to his grandson in days to come, 'That is a strain of seed that was sent me from America just after the great war. I have carefully kept it during all the years. I hope you will carry it on after me.'"

Every horticultural interest should rejoice in the growing appreciation of the flower shows and the tendency to put them on a more stable basis. The big show to be held in New York the coming week promises to be one of the most successful and most largely attended ever held in this country. Some features of former shows will be lacking, and the results of the war's restrictive measures may be seen. Yet the arrangements call for an exhibition which will be of the greatest value and interest to the flower loving public. And after all it is for the public that these shows are being given. For a long time the trade did not seem to appreciate this fact, and trade features were given special attention. Without question every member of the trade who attends this show will be benefitted in his business as a result. The main point, though, is to have the show one to which the public will flock in great numbers and where it will receive such an inspiration as will bring about a much greater use of cut flowers, as well as a much wider planting of gardens and estates. It is in this way that the trade will be helped, and everything which is done to make the show a success will be like casting bread upon the waters, with the absolute assurance that it will return again.

Possibly less has been heard about the show in Boston which will come on the following week, and yet there is promise that it will be one of the most important flower exhibitions ever given in New England. The chief feature will be a display of orchids from the Burrage establishment in Beverly. It is expected that this exhibit alone will fill the lecture hall, making it far and away the largest display of the kind even seen in America. Hardly second in interest, though, will be the Japanese azaleas which E. H. Wilson, assistant director of the Arnold Arboreteum, brought back from Japan last April. There are over a hundred of these azaleas, and they have been grown with the utmost care in the greenhouse of Professor Sargent. They are now coming into flower, and will be at the height of their beauty the week of the show. These azaleas, which for the most part are kinds never before seen in this country, are of wondrous beauty, and it is expected that they will cause no less than a floral sensation. Indeed, it was a feat of no small moment to get these living plants across the Pacific and then across the American continent and have them ready to show at a public exhibition a year later. Altogether, flower lovers have a great treat ahead of them, whether they go either to the New York show or the Boston show, or better still to both.

Grand Exhibition

OF

Orchids and Other Plants

Horticultural Hall, Boston,
 Wednesday, March 24 to Sunday, March 28, inclusive

Under the auspices of the

MASSACHUSETTS HORTICULTURAL SOCIETY

Magnificent Display of Orchids from leading Private and Commercial Growers. Wonderful Collection of Japanese Azaleas from the Arnold Arboretum, never before shown.

\$5,000 IN PRIZES

In connection with the above, the annual Spring Show of the Massachusetts Horticultural Society will be held, with liberal prizes for bulb plants, carnations and other flowers.

Applications for space, prize schedules and information should be made to

FLORISTS**

**Flowers Under
Glass**

Easter is coming along rapidly and by this time lilies should be showing well advanced buds. The skill of the florist must now be exercised in handling the plants so that they will come at just the right time. It is considered the best plan to grow them at a temperature of from 60 to 65 for a week, then gradually cool them off. Of course if you have a lot of lilies which are backward you will need to push them hard to have them catch up with the rest of the stock. This means not only a high temperature but plenty of water both at the roots as well as frequent syringing.

Increased interest is being shown in orchids this season in the east, perhaps because of the big New England show being staged this month. Orchids therefore should sell well in the flower stores. Miltonias will be coming along now and should have a place where they can be near the glass but shaded slightly. These orchids need plenty of ventilation and by means of ventilators you can also keep the temperature down. Don't forget a light syringing overhead when days are bright and fumigating once a week lightly to control thrips. Cattleyas that have been newly potted up require careful watering until their roots reach the compost. It is better, all things considered, to under water than to over water. Apply the water in the morning and syringe well so that they will dry off before night comes. A little shade will be needed, but only enough to break the direct rays of the sun. A sponging with Aphine or Imp soap is a great help. About sixty degrees is the right night temperature, with seventy or more when the sun is up.

It is about time to be transferring
pansies started from seed in Novem-
ber or December to hot beds or cold
frames. If a hot bed is used it should
have only a mild heat as rapid growth
will not be desirable. Be sure that
the pansies are kept moist at the
roots, and when the days begin to
get warm remove the glass for a part
of the time.

Florists who have a good sale for
cannas are now starting a part of
their stock into growth. Early plants
will be obtained in this way and there
is always a demand for pot-grown
cannas when the season is young. It
isn't every city that offers a good mar-
ket for cannas, but in some places the
plants sell remarkably well. Place
the roots on a few inches of sand, soil
or dampened moss over bottom heat
and leave them until the crowns are
distinctly developed. Then they can
be cut up with one shoot to each
piece and the pieces potted using 3
or 4-inch pots. It is decidedly to the
advantage of the grower to use small
pots because space is none too plenti-
ful at this season, and cannas sell
about as well in 3-inch as in 5-inch
pots. This applies of course to the
bedding sorts. Fancy stock may re-
quire a different treatment with re-
potting.

Jas. R. Steinicke has sold his green-
houses at Old Orchard, near St. Louis.
Richard Hassell is the new proprietor
and will devote himself mostly to the
growing of carnations.

SEEK QUARANTINE CHANGE.

Efforts of the Dahlia and Gladiolus Growers in New England.

The dahlia and gladiolus growers of New England are making vigorous efforts to induce the state of Illinois to modify its European corn borer exclusion quarantine so as to allow the entrance of gladiolus corms and dahlia tubers. Last Saturday morning a meeting was held at the office of Commissioner Gilbert in the State House, Boston, and it was voted to have Mr. Gilbert send a telegram to the Illinois State Board of Agriculture pointing out that the Federal Horticultural Board at Washington had admitted that dahlia and gladiolus bulbs without stems were incapable of transmitting the borer, and asking that the Illinois Board follow the example of the National Board in giving these bulbs a clean bill.

Commissioner Gilbert was also requested to wire Chairman Marlatt of the Federal Horticultural Board, requesting him to use his influence with the Illinois Department of Agriculture to obtain this modification of the Illinois ruling.

New England growers are receiving large numbers of orders from Illinois amateurs as well as from commercial growers, and of course are unable to fill them, which means a big loss and works an unnecessary hardship on the flower lovers of Illinois.

Commissioner Gilbert received on Tuesday morning a telegram from the Commissioner of Agriculture of Illinois in which he said that the matter of quarantining New England material would be referred to the Advisory Board, at whose suggestion it was originally established.

It remains to be seen of course what the Advisory Board will do, as the Commissioner's telegram was wholly noncommittal.

LADIES' SOCIETY OF AMERICAN FLORISTS.

Through the courtesy of Mr. A. L. Miller, president of the S. A. F. and O. H., the members of this Society are invited to avail themselves of the privileges and comforts of the booth which has been donated by him as their headquarters.

The president, Mrs. B. Hammond Tracy has issued a call for the meeting of the Board of Directors of the Ladies' Society of American Florists on Thursday, March 18th, at 2 o'clock, at the Grand Central Palace International Flower Show. Several matters of importance must be attended to and every member of the Board is urged to attend or appoint a proxy.

CHRYSANTHEMUM GALL MIDGE.

The chrysanthemum gall midge, *Diarthronomyia hypogaea* Leow, has been responsible for considerable damage in the eastern United States during the past five years. This insect was probably brought into this country from Europe on chrysanthemum plants. It was first discovered in the United States at Adrian, Michigan in 1915, but now occurs in nearly all states where chrysanthemums are grown.

The adult is a small slender two-winged fly which lays eggs between the hairs of leaf or stem, particularly of the new shoots. Each maggot or larva forms a separate gall, within which it transforms in 40 to 50 days. Galls occur on leaves, tender shoots, and flower sepals, those on the shoots causing the most injury. Some varieties are more susceptible to attack than others. The appearance of the galls and the adult fly laying eggs are shown in the accompanying illustration.

Early in 1919, Mr. M. P. Zappe, assistant entomologist of the Connecticut Agricultural Experiment Station conducted in two large greenhouses, some experiments in controlling this pest. In these tests were greenhouse benches, screened and unscreened, treated with carbolic acid emulsion, nicotine sulphate, arsenate of lead, fish oil emulsion, powdered tobacco, and "Scalecide." Untreated sections were kept under observation as checks. The first applications were made January 3, and the treatment was repeated every three or four days until March 3. All plants were badly infested with galls.

The best results followed the use of nicotine sulphate (40 per cent.) one teaspoonful to one gallon of water plus one ounce of common yellow laundry soap. Of course the old galls remained, but at the end of the experiment no new galls could be found on the plants; consequently the treatment must have killed the insects before they could make new galls. Apparently this treatment kills the eggs or the young larvae before they enter the tissues.

"Scalecide," one part diluted with thirty parts of water, was effective, as there were no new galls at the end of the experiment, but there was slight injury to the leaves.

Carbolic acid emulsion and fish oil emulsion both were of some value, as there were only a few new galls on the treated plants at the end of the experiment.

Arsenate of lead and tobacco dust seemed to give no protection, as there were about as many new galls at the end of the experiment as at the beginning.

Some growers deem it necessary to spray every day or every other day to hold this pest in check, but the work of Mr. Zappe indicates that if the nicotinic and soap spray be applied thoroughly twice a week, for a period of six or eight weeks, the plants may be freed from galls. Doubtless fewer treatments will hold the pest in check.

W. E. BRITTON.

Connecticut Agricultural Experiment Station.

GROWERS TO ORGANIZE.

Meeting to Be Held at the American House March 23.

The work of organizing the Boston growers as a branch of the National Growers' Association has been begun. Mr. E. Allan Peirce and Mr. Samuel J. Goddard are now sending out notices for a meeting to be held at the American House on Tuesday, March 23. It is expected that there will be a very large attendance of growers from different parts of New England and that when Organizer Ammann comes he will receive a very warm welcome.

CO-OPERATION.

Mr. Samuel Robinson Shows How It Can Be Adapted to Present Conditions.

I have been asked to express my view concerning the advancement and progress of the Florist Business, especially right here in the East. I know of nothing that will advance the progress of our business so much as Co-operation. There is, perhaps, no other business which lacks this element so much as the florist business. Why? Because the men connected with the business are more ignorant of business affairs than in other lines? No, not at all—much to the contrary.

I can scarcely keep from expressing my feeling that I am proud to be numbered among many of the men who are so intimately connected with this line of trade; men who know, and know well how to measure other men; men who know that the true measure of a man's ability lies principally in the power to help others, and so add to their progress; men who know that the amount of money each man makes is no precise measure of service which he has rendered to his fellowmen, or the progress which such a man has made possible.

Wherein then, lies the great trouble? I answer in the lack of activity, leadership and Co-operation. Just ask yourself what has been done toward the advancement of the flower business in the last thirty years? Very little, aside from Mr. Henry Penn, who has led the florist business to a higher plane of success. What real Co-operation exists among the growers, wholesalers, retailers and the public at large? None. In my opinion there is only one method which will remedy the existing dreamlike conditions. This remedy is Co-operation—Co-operation of the right kind—Co-operation simply for the promotion of the flower business.

Telling a grower that he is exacting too high a price for his product, and asking him to lower his price is not Co-operation. It is childishness. The indestructible economic law of supply and demand inevitably determines the price of an article. To feel that our affairs will develop without effort, that the public at large will continue to buy flowers, more and more, as the years go on, without some adequate way of pointing out the grandeur of flowers is simple folly, not Co-operation.

There is no exact and concise definition of the term. When a motor is constructed in such a manner as to obtain the highest efficiency, we say that the parts co-operate highly. But it must be borne in mind, as the re-

sult of a scientific principle, that the motor will never give us the Maximum Electrical Energy without Co-operation of the parts. Without Co-operation of the parts in relation to the whole, there must result a waste of energy. As another example, take the human body, a very complex machine. We cannot deny that the hands co-operate with the feet, the arteries co-operate with the blood vessels, etc. An enormous waste of human energy will result unless this anatomical Co-operation exists, or is made to exist.

There is absolutely no difference in the results obtained when it comes to the flower business. It goes without saying that the resources of the growers are dormant and undeveloped. The value of flowers in the home, in the hospital, in the theatre, etc., is in no way pointed out to the public at large. Glutted markets are too frequent. The florists of Boston and the New England States are entirely disorganized. More than half do not know that the other half is alive. I have no doubt in my mind that proper Co-operation along these lines would be fraught with a marked tendency toward the reduction of these evils.

It is indeed a pleasure to feel that some of our florists have awakened from a long dream. I mean specifically the formation of the Boston Florist Association. This association brings us on the threshold of a new era, which, with proper leadership, efficient management, which spells Co-operation, this association can do innumerable good for our flower business. But we must remember, as Ralph Waldo Emerson put in one of his famous essays—

"For good thoughts are no better than good dreams unless they be executed."

SAMUEL ROBINSON.

THE MARKET

There has been no important change in the markets of the country during the past week. There has been, to be sure, a slight stiffening which leads all hands to hope that in a week or two the gluts will be over and profits greater. Nevertheless, prices have remained just about the same in all of the markets. Until the middle of the week there was a downward tendency, especially in New York, Pittsburgh and Buffalo. It certainly has been a buyer's market and there has been a general tendency on the part of the retailers to take advantage of the situation. This was noticeable in Boston where dealers got together and made special advertisements in the daily papers to promote the sale of flowers. Possibly the Boston people have not done the job quite so effectively as the Chicago florists, but have made a move in the right direction. Certainly the Chicago florists have found how to do retail advertising to the queen's taste.

Of course stevia is out of the market. Paper whites have been very short and in some places not to be obtained. Pittsburgh reports some very fine orchids which have sold from 75c. to \$1.00 each. In that market pussy willows are going well at from \$5 to \$6 and daisies \$3. Tulips are appearing and selling for about the same price as daffodils, that is, 6c. Violets are away down and it is safe to say that there is little money being made when they sell for from 75c. to \$1. Carnations have naturally followed the downward tendency.

It is understood that Mr. A. Jablonsky, of Clayton, Mo., is to erect three new greenhouses, each 32 x 300 feet, using pipe frame construction throughout.

SALEM MASS.

BOSTON'S BIG SHOW.

Orchids and Japanese Azaleas to Be the Features.

Rare orchids from every country under the sun are to be exhibited at the great Orchid Show of the Massachusetts Horticultural Society, which will be held at Horticultural Hall, in Boston, Wednesday to Sunday, March 24 to 28. Applications for space will exceed the capacity of the exhibition halls. More than three hundred thousand dollars' worth of orchids, it is estimated, will be shown.

Albert C. Burrage, of Boston, who has the largest private collection of orchids in this country, will make exhibit from his twenty or more greenhouses at "Orchidvale," near Beverly Farms, which will completely fill the large lecture hall. The hall will be arranged with trees, palms and other tropical vegetation, with the orchids growing on them as they do in their native haunts. Although made to appear like a section of the tropical jungle the various plants will be displayed to show each one to the best advantage. Orchid growers of Boston, Western Massachusetts, New Jersey, New York and Philadelphia will exhibit at the coming show.

Assistant Director, E. H. Wilson of the Arnold Arboretum announces that that institution will make an exhibit of some 130 Japanese Azaleas which have never before been shown in this country. These plants were secured from Japan and are now being prepared in the famous Sargent Greenhouses at Brookline, so that they will be in flower at the time of the exhibition in March. There will also be large exhibits of other plants, but the orchids will be the main feature of the show, more than \$3,500 in addition to gold, silver, and bronze medals having been allotted for prizes for this

class of plants and flowers alone.

The purpose of this exhibition is to interest a larger number of people in this most beautiful class of plants. The extension of orchid culture within the last quarter of a century has been remarkable. In large collections there still remains a wide field for the exercise of cultural skill, and it is to develop this that the Massachusetts Horticultural Society is holding this exhibition and offering large prizes.

BOSTON.

Among the trade in Boston, the following will visit the New York Flower Show next week: Henry M. Robinson, Wm. R. Nicholson, E. H. Wilson, Donald McKenzie, Henry R. Comley, P. L. Carbone, Henry Penn, Mr. and Mrs. B. Hammond Tracy, W. H. Golby, Herman H. Bartsch, Thomas Roland, P. Welch, Wm. C. Rust, Wm. N. Craig, E. Allan Peirce, Louis J. Reuter, Samuel J. Goddard, W. D. Howard, J. K. M. L. Farquhar, Frank Murray and Peter Arnott. Chas. S. Strout of Biddeford, Maine, is also planning to attend. Messrs. Welch, Roland, Bartsch and McKenzie will act as judges the first day of the show.

At the next meeting of the Garden-

ers' & Florists' Club of Boston, either J. Edward Moon of Morrisville, Pa., or John Watson of Newark, N. Y., will address the club on "The American Association of Nurserymen: Its Aims and Purposes."

The Boston Society of Architects and the Boston Society of Landscape Architects, enjoyed a joint dinner in the Parker House early in the week, with President H. H. Kendall of the former body presiding. Loring Underwood, of Boston, gave an illustrated talk on New England gardens.

CHICAGO FLORISTS' CLUB.

Owing to the inclement weather and blizzard but a very small number of the trade were able to attend the March meeting of the Chicago Florists' Club.

President Waters called the meeting to order at 8.45 p. m. At roll-call the President and secretary were the only officers reported present.

The following were elected to membership: C. A. Wrigley, supplies, 130 N. Wells St., Chicago, Ill.; Albert Koehler, seedsman, 172 N. Wabash Ave., Chicago, Ill.; Vincent Neil, seedsman, 172 N. Wabash Ave., Chicago, Ill.; H. W. Miller, florist supplies, 324 W. North Ave., Chicago; Herbert Stone, retail florist, 4011 Milwaukee Ave., Chicago.

Nominations for membership were as follow: Chas. S. McCauley, grower, Geneva, Ill.; Wm. Langhout, seedsman, 172 N. Wabash Ave., Chicago; Lorenz P. Geiger, plantsman, 4905 Quincy St., Chicago; Edward Clody, retail florist, 3912 N. Clark St., Chicago; George Wienhoeber, retail florist, 41 S. Wabash Ave., Chicago; A. Hall, retail florist, 4700 Sheridan Road, Chicago; H. E. Bruns, retail florist, 3040 W. Madison St., Chicago; Fred Stielow, an expert in this line and some unique

grower, Niles Center, Ill.; C. Clemensen, retail florist, 7801 Exchange Ave., Chicago; Nick Damm, Jr., grower, Morton Grove, Ill.; James R. Paul, landscape gardener, 1112 Lawrence Ave., Chicago; Ernest Weiss, grower, Elmhurst, Ill.

James Morton, Chairman, announced the appointment of the following co-workers on the Garden Committee: Ed. Goldenstein of Vaughan's Seed Store, Ralph B. Howe of W. W. Barnard Company, John Begnan of A. Henderson & Company, Everette R. Peacock of the Everette R. Peacock Company.

Mr. Morton, speaking for his committee, stated that more than 175,000 Hi-Cost-of-Living Gardens will be started in Chicago the coming spring. This committee has laid plans to co-operate with local garden clubs and school gardens in an advisory capacity to advance an interest in horticulture—booklets on garden work will be distributed—an appropriation of \$100 was voted for the use of this committee.

President Waters demonstrated the latest methods of coloring cut flowers as applied so extensively to St. Patrick's Day requirements. "Tim" is

color combinations were shown during the evening. It developed that the March 17th green was the quickest color to show its effect, approximately 30 minutes being required.

The Joy Floral Company of Nashville, Tenn., sent a very fine exhibit of seedling carnations and A. Kirchner of Defiance, Ohio, furnished some blooms of his Pink Sport of Enchantress Supreme. Unfortunately both exhibits were overtaken by the blizzard while in transit and consequently same reached us in bad condition.

An invitation was extended to these parties to send another display for the next meeting.

Secretary Lautenschlager explained the new coal ordinance which was recently passed by the city council of Chicago. This ordinance was primarily drafted to regulate the resale of coal. Owing to the omission of the words "For Re-sale" all industries purchasing coal in carload lots would be required to take out a license of \$1500.

The Chicago Florists' Club and other Industrial Organizations entered a strenuous protest against this ordinance and it was requested that same be repealed or amended at once to exclude florists and all industries obliged to purchase coal in carload lots as consumers of same. From all indications this request will be carried out in the very near future, as the act will surely be declared unconstitutional as it stands at present.

Mr. Joseph Kohout, president of the Commercial Flower Growers of Chicago, now known as Local 1 of the National Association was scheduled to present a report in behalf of this organization. Owing to inability of Mr. Kohout to attend our meeting his report will be presented at the next meeting.

The next meeting of the Chicago Florists' Club will be held at the Randolph Hotel, Thursday, April 8th, at 8 p. m.

F. LAUTENSCHLAGER, Secy.

GENERAL NOTES.

Elmer E. Blood, a well known florist of Brockton, Mass., recently passed away. He was born in East Pepperill, June 27, 1876. He was in the flower business for 20 years, and his place on Grove street was a prominent establishment.

CONSTRUCTIVE OR DESTRUCTIVE?

In all branches of industry there are usually two classes of men who belong either to the constructive or the destructive class and invariably you can judge them by their mode of action. There are many who by reason of their sentimental and moral consciousness feel they are a part of life's work and are ever ready to lend a helping hand for a cause that is beneficial to others, and therein get their greatest pleasure.

On the other hand, there is the type of being who by his indifference and selfishness has no time to interest himself in anything that is not for his personal gain. Yet he manages to get along for a time until he begins to reason with himself and finds out that by straightforwardness and earnestness he can accomplish much for others and at the same time result in bigger things for himself. This in a nutshell is the answer to many men in our line who have endeavored to show a constructive nature by tying up with the doings of the S. A. F. and the constituent bodies; the most active of these being the F. T. D.

Every now and then we hear of a man complaining that he derives no benefits and why should he devote time and energy to such a cause and the Rotarians slogan might well apply here, "He profits most who serves best;" it's an ideal that is worth living up to and by practicing this motto he will gain the three essentials for happiness—health, honor and harmony.

Run up and down the lists of men who are doing things and see if they possess these accomplishments and then ask yourself. Am I among this group? And, if not, why not.

One of the first steps worth taking would be to join the S. A. F. then the F. T. D. and the third step—your contribution to the National Publicity Fund, which is doing a big service to the trade generally where progress is the password and constructive action is the net result of which you become a part, then will you be a party to the best effort the S. A. F. ever fostered.

Elbert Hubbard, wisely said, "If you don't love your job, don't worry about it; some one else will soon have it."

Here is an opportunity that is bound to help, and yet —

Well, the answer is. Will you send your check?

That tells the story.

Have you faith in your business?

Of course you have. On with the work.

THE BOILER OF Unequalled Fuel Economy

Kroeschell Boilers, the best by test since 1879. Forty years' experience.

THE QUALITY PLACE OF BOSTON

Regarding the Kroeschell, it is the best we have ever had and satisfactory beyond our expectations. It heats up especially quick and has saved us considerably already in the price of fuel. When we are in need of another boiler we will give the Kroeschell the first consideration.

(Signed) WM. W. EDGAR CO.,
WAVERLEY, MASS.

No Masonry—No Tubes

TUBELESS BOILER

Kroeschell Bros. Co., 466 W. Erie St.
CHICAGO

When You Buy—Get a Kroeschell

3,016,286 sq. ft. of glass was equipped with Kroeschell Boilers during the year of 1919.

OHIO'S CELEBRATED CYCLAMEN SPECIALIST

After using your No. 12 Kroeschell Boiler I came to the conclusion that had I to install more boilers it would be the Kroeschell and no other. It really is a pleasure to heat, no trouble to get the desired heat in a very short time.

(Signed) CHRIST. WINTERICH,
DEFIANCE, OHIO.

Little Talks on Advertising

It seems to me that the Heepe Company of Akron, Ohio, has about the right idea in its methods of reaching the public with its floral offerings. I like the way in which they feature one thing at a time, bringing it to the attention of their readers in bold, strong type. Before me I have a copy of this advertisement as it appeared in the Akron Journal on Friday, February 20. This ad. is two columns wide, surrounded by an attractive drawn border and reads as follows:

SPECIAL SALE OF SPRING FLOWERS DAFFODILS \$2.00 per dozen

From now on flowers will be plentiful owing to the increased sunshine and daylight, and consequently lower prices will prevail.

THE HEEPE COMPANY
37 South Main St.,
Metropolitan Building

It is safe to say that this advertisement brought a big demand for daffodils. The inference to be drawn from the advertisement was, of course, that these daffodils were a bargain at two dollars a dozen and whether they were or not the ad. would greatly increase the sales. The suggestion that flowers will be cheaper from now on is enough to awaken a responsive note in the thought of buyers and influence them to purchase more freely. Incidentally florists evidently are beginning to feel that the peak of the high prices has been reached and that it is necessary to lead the public to expect a gradual drop. The Heepe Company is following very much the kind of suggestion which HORTICULTURE has been putting out in this department. The making of a Saturday special is a case in point. Certainly there is no reason why florists as well as candy makers or fruit stores should not advertise special sales. This is a perfectly legitimate and a business paying plan.

Truth to tell florists have yet much to learn about up-to-date methods of retail advertising.

The Knoble Brothers, of Cleveland, Ohio, are consistent advertisers and realize the value of large space. Their advertisements are put out in almost exactly the same way as that followed by department stores and other retail establishments. "Say it with flowers" is featured in large type at the top of their ads. And other points are brought out one by one on consecutive days. A recent advertisement reads in part as follows:

"If ever you were sick and received a few flowers conveying the thought of a friend, then you understand what it means to 'say it with flowers' for the sick. And to express such thoughtfulness nothing exceeds the appropriateness of flowers. So we count among our specialties numerous flower arrangements that interest the convalescent with their delightful freshness and color.

"Remember it's what you send not the amount that counts. Here is a list of appropriate suggestions:"

The ad. then goes on to give a list of different plants, such as daffodils, tulips, primroses and cinerarias, with

the prices of each. In a box at the bottom of the advertisement is this statement:

"Through 1,500 associates we can telegraph your thoughts to sick friends in distant cities."

It will be seen that one salient feature runs all the way through this advertisement, namely the desirability of expressing sympathy and friendship for shut-ins by the use of flowers. We believe that this is an important point in good advertising and that the Knoble Brothers are winning business for themselves by their practice of quoting prices in large figures.

The American Greenhouse Manufacturing Co. has opened an office at Seattle, Wash.

Mr. D. D. P. Roy has become superintendent of Villa Velie at Moline, Ill., the estate of W. L. Velie, the automobile manufacturer.

The American Greenhouse Manufacturing Co., of Chicago, has been given an order for six steel-frame greenhouses to be constructed for the Joy Floral Co., at Nashville, Tenn. Each house will be 36 x 500 feet.

DREER'S "Riverton Special" Plant Tube

No.	Diam.	Ea.	Doz.	100
10	20 in.	\$4.50	\$49.50	\$375.00
20	18 in.	3.30	36.00	293.00
30	16 in.	2.35	26.00	200.00
40	14 in.	1.90	21.50	170.00

FERNS

THE VICTORY FERN (*Nephrolepis victoria*)

We take pleasure in offering this new and valuable variety of *Nephrolepis*. It is a beautifully crested form of "Teddy, Jr." with fronds frequently subdivided on the ends, making a most unique, distinct, and desirable variety.

This fern was

AWARDED A BRONZE MEDAL

at the S. A. F. Convention at Detroit in August, 1919. The judges of the award reported as follows: "Special stress is laid on the new fern Victory, with a rapid growth and a branching at end of fronds, making it a shapely plant. It should be a commercial success, and we **RECOMMEND IT MOST HIGHLY.**"

Strong plants, 2½-inch pots, \$3.00 per dozen, \$20.00 per 100

NATIONAL PUBLICITY CAMPAIGN

There has been a good demand for the new Easter and Mother's day newspaper electrotypes illustrated in the January issue of the Journal of the S. A. F. and O. H. and their use will link up well with the advertisements for these days appearing in the magazines. The electros are so designed that a business card or other matter can be added to them by the newspaper compositors without injuring the general effect. Florists who have not availed themselves of the various electrotype offers of the Promotion Bureau should send in their orders to the secretary without delay. as on April 1 electrotype foundries all over the country will adopt a new scale of prices, due to the high rate of wages they are now called upon to pay, and these prices will be in the neighborhood of one hundred per cent advance on the prices we are now receiving, as we are running upon a contract placed long ago, and which has permitted of our prices remaining unchanged despite the fact that the foundry quotations have naturally advanced within the past year.

Florists are also reminded that our Series No. 2 lantern slides contains one for Easter. All who use the moving picture houses for their local advertising should have this series. Series No. 1 contains a slide for Mother's Day. All slides are in colors, and there is room on each for a three line imprint, which we furnish.

With the winter practically over, little difficulty is experienced now in the installation of billboard signs. Orders for several of these signs have been received of late and shipments are made from the factory as fast as orders are received. Hundreds of florists have locations upon their own establishments which would suit a billboard installation admirably, and the cost of such a sign, \$50, should not stand in the way of an installation. The slogan "Say it with Flowers" exerts a tremendous power, and used in this form is of great advantage to the Publicity Campaign.

We are still waiting to hear from those florists who have not yet subscribed to the Campaign Fund. Their apathy is hard to understand. Here is a movement destined to put money in their pockets—it is doing it already—yet they are not supporting it. It is no lottery, it is an investment

pure and simple, and good returns must surely result. As one of our enthusiasts recently said: "Through this campaign the florists are doing what they should have done years ago, what other producers have been doing and are still doing—advertising their products. Some concerns are adver-

ALEXANDER'S DAHLIAS

For Florists and Seedsmen

If you are looking for something good for your florists' business, try my New Cut-Flower Varieties offered below. I highly recommend them:

MAUDE ADAMS (New Show Dahlia). A pure snowy white very daintily overlaid and suffused the sweetest shade of rose-pink imaginable. It is the best of my introductions for florists' use, and a variety I can highly recommend. "Maude Adams" is the most prolific Dahlia of its color. It has good stems and is an early Dahlia to blossom, continuing throughout the entire season. It has the necessary features that make it stand shipping well, and makes up good in all kinds of work. Strong divisions. \$3.50 per dozen, \$20.00 per 100.

HORTULANUS FIET (Giant Decorative Dahlia). Beautiful salmon-pink with a slight blending of yellow. Good divisions. \$15.00 per 100, \$2.00 per dozen.

MADONNA (New Peony-Flowered Dahlia). A very beautiful white, very slightly tinted with a most delicate shade of lavender-pink. The form of the flower is original, each petal curling and twisting in a very pleasing manner. An excellent cut-flower variety. Strong divisions. \$1.50 per dozen, \$10.00 per 100.

MINA BURGLE (Decorative Dahlia). The finest scarlet cut-flower Dahlia to my knowledge. Flowers of large size, on long, wiry stems, well above the foliage. Good divisions. \$1.50 per dozen, \$10.00 per 100.

FRANK A. WALKER (New Decorative Dahlia). A charming shade of lavender pink, with long stiff stems, making it first class as a cut-flower Dahlia. An exceptionally early bloomer. Good divisions. \$3.50 per dozen, \$25.00 per 100.

MRS. WARNAAR (Peony-Cactus Dahlia). Gigantic flowers of creamy white, suffused a delicate shade of pink. An early continuous bloomer. Stems from eighteen to thirty-six inches long. Good divisions. \$5.00 per dozen, \$35.00 per 100.

If you are interested in Cut-Flower Varieties, I will recommend to you the best varieties in the colors you want, and give you the benefit of my twenty-five years' experience as a Dahlia Specialist.

MY TRADE LIST OF 1920 gives complete descriptions and prices of Over 300 of the Most Up-to-Date Dahlias in the World, and is mailed free. Write for it now.

Vol. XXXI

MARCH 20, 1920

No. 12

THE TALK OF THE TRADE

I was much interested in what Geo. Watson said to me the other day and I think his remarks well worth passing on. So here they are:

"The artistic arrangement of flowers is a fine art. No amount of telling or trying will make an artist out of one, unless the gift be inborn. The great and only Battles had the gift when he began some thirty years ago to set the pace in Philadelphia, but it took the world a good while to realize it, and even now some of them do not know just what made him rich and famous. One of his favorite quotations in the olden days was. "You can't make a silk purse out of a sow's ear," and that is as true today as it was then. It's like music and poetry—so well defined by Alexander Pope:

—Music resembles poetry; in each
Are nameless graces which no
methods teach,
And which a master-hand alone
can reach.

Window dressing comes under the same heading. It isn't the place nor the materials. It's the artist. Where would Michell's retail following be today without a Philip Freud to put poetry into every business bid in store window or flower show. Philip may have been born with many other natural gifts, but the artistic sense and the ability to express it made him a marked man distinguished and valuable among men equally able in every other direction.

Continued adverse weather has been a source of considerable worry to Washington florists with the near advent of a comparatively early Easter. That city has escaped the terrific storms that spread over the north and west, but it has had its share of cloudy weather with a larger number of rain and snow storms than usual.

"The date is a little against us," said David G. Grillbortzer, of the Washington Floral Company, speaking of Easter coming on April 4. Mr. Grillbortzer is vice president of the American Carnation Society and a member of the executive committee of the Florists' Club of Washington, and has large holdings in Alexandria, Va.

"The delay in getting the Japanese bulbs to the United States set the

growers back a great deal," he continued. "They had to speed up production, but I feel confident that unless we have an unprecedented amount of adverse weather, most of the Washington growers will be right 'on crop.' The plants this year will be much better than during the past two years. Last year we had to depend on bulbs that had been kept in cold storage, it having been impossible to import any because of the embargo against the use of shipping space for that purpose. In Alexandria we have between 5,000 and 6,000 pots bearing from three to fifteen flowers each.

"Hydrangea plants are looking excellent. We will have about 1,500 pots. The wholesale price in this market will probably be about \$3 up. It is impossible at this time to predict the price of carnations. I believe that there will be enough to go around, but orders should be placed early to secure a choice of stock."

Orchids have sold well during the past season. It is true that at the present time prices are practically normal, but midwinter when the flowers were in great demand, the prices obtained were far ahead of those ever before known. In New York about Christmas time it was not unusual for choice flowers to bring five dollars at wholesale. Altogether the commercial growers of orchids have had a good season, and unless conditions become unexpectedly bad returns from orchid growing should continue good.

It seems rather strange to find more than a page of solidly set advertisements in an English garden paper, placed by gardeners and helpers who want positions. The situation in England must be very different from what it is in this country, where gardeners and garden help of all kinds is very hard to obtain. It is true that higher wages are being paid across the water than ever before, but regardless of that fact, the gardeners as a class seem

This is a photograph made by E. H. Wilson of Azuma-Kagami. It is the original pink Kurume Azalea, and is over one hundred years old. See Page 237.

loyal to their profession. It is a question if there will be any trained gardeners in America after a few years unless apprentices appear in larger numbers than at present. And with this unceasing scramble for the almighty dollar, an apprentice's wages do not seem very attractive.

The board of relief of the town of Greenwell, Conn., has dropped \$168,000 from the valuation of the greenhouses of A. N. Pierson, incorporated, boosted by the board of assessors, it was learned yesterday. The company's claim was for a reduction of \$225,000.

The company, through its counsel, protested against the amount listed by the board of assessors on its greenhouses. Last October the assessors revalued the property of the town and when they came around to Pierson's place they increased the amount from \$170,000 to \$410,000. When the company received its notice of increase a complaint was made to the effect that the assessors had listed the property at a rate much beyond its real value.

BELONGS TO MCGREGOR.

"As Near as Your Telephone" a Protected Phrase.

Newburyport, Mass.
Feb. 23, 1920.

Dear Sir:—In your Feb. 14th issue, under the heading "Little Talks on Advertising," there appears a reproduction of J. Albert Brodrib's advertisement making use of the phrase "We are as near to you as your telephone."

The use of this phrase is (and has been so held in previous cases) an infringement of our Trade-Mark and we have so notified Mr. Brodrib today.

Since there are undoubtedly many other florists whose attention will be drawn to that phrase through your article and who may thereby be inclined to use it in their advertising as a result, we think it would be best for your advertising author to let your readers know that it is not a free phrase but protected for our sole use by the trade-mark laws.

Very truly yours,

C. J. MCGREGOR & SONS.

New England florists are being warned to look out for a bad check worker who has been operating in Lawrence, Lowell and other cities. His game has been to buy a floral piece amounting to \$7 or \$8, tender a \$28 check or thereabouts in payment and get the change in cash. He is described as 40 or 45 years old, slim, dark hair mixed with grey, smooth face.

The New York Show

Large Attendance and Many Very Fine Exhibits

The International Flower Show opened in New York, Sunday, March 14th, and it is a good, very good show. The first day's receipts are much ahead of last year. The quality of the stock exhibited is very fine. Some important features are lacking, but the arrangement in general is away ahead of any previous show. The general effect also is very fine.

The second day's attendance also ran ahead of last year, and the success of the show seems assured. The management is great, and everything running smoothly, showing perfect organization.

It is interesting to note the drawing power of the New York Show. The "big fellows" from all over the country are in attendance, particularly Chicago and all Middle West points. It seems certain that a great many of the visitors will come on for the big Boston show next week. Also it is to be hoped that many will arrive in time to attend the meeting of the National Growers' Association called for Tuesday, March 23rd, in Boston, at which time Ex-president Ammann will outline the plans of the new society and establish the local branch.

C. T. Beasley & Co., of East Milton, Mass., were awarded a silver medal for a special exhibit of pansies (not in schedule).

Among the exhibits which attracted particular attention might be mentioned briefly the following:

A. N. Pierson's rose garden is a gem, and first prize well deserved.

The plants of *Cineraria stellata* exhibited by W. B. Thompson and A. Lewisohn were wonderful, also the

marguerites, *schizanthus* and *primulas* shown by A. Lewisohn.

The exhibits of flowering bulbs and plants by A. Lewisohn and Mrs. Payne Whitney in the classes for private growers were simply wonderful, and the collection of bulbous plants by Mrs. Payne Whitney was also very fine.

A. Lewisohn's collection of roses in pots, also his rose garden, were worth going a long way to see.

The Marguerites and *Spiraeas* in the commercial classes shown by F. R. Pierson Co. and Madsen & Christensen were very well-grown, and A. N. Pierson's display of flowering and foliage plants was beautifully arranged.

The rock garden enthusiasts lingered around the exhibit staged by the Detmer Nurseries.

As usual, the ferns exhibited by F. R. Pierson Co. and Robert Craig Co. captured most of the honors in the fern classes. Some beautiful specimens were shown by both firms.

A. L. Miller's lilies came in for much admiration, and these were wonderful in every way.

Joseph Manda's orchid plant display was a wonderful collection of beautiful varieties and a riot of color. Lager & Hurrell's display also came in for much admiration.

The cut roses in the commercial classes were never better, especially American Beauty, *Ophelia* and *Premier*. The 25 undisseeded pink, shown by John H. Dunlop, couldn't be better; mammoth blooms and grand finish.

The display of cut roses by Traendly & Schenck and F. R. Pierson Co. called for some work on the part of the judges in making their decision. It was a big fight and very close, but Traendly & Schenck were given 1st prize.

DREER'S CANNAS

This season we harvested the finest and largest crop of Cannas that we have ever grown.

KING HUMBERT

And all the other good varieties you should have are included in our list and the roots are heavy and firm.

PRICES: The prices quoted are for dormant roots, which can usually be supplied until about the first of April, after which pot plants will be sent out and in which the advance in price will be as follows: All varieties listed at \$7.00 or less per 100 will be supplied in pot plants at \$8.00 per 100 or \$70.00 per 1000, and on varieties listed above \$7.00 per 100 there will be no change in price between dormant roots and pot plants.

All have green foliage unless otherwise specified.

TWELVE SPECIAL VARIETIES

Carmine Beauty. Deep bright carmine flowers freely produced high above the heavy dark-green foliage which has a narrow red margin. 4½ ft. 15 cts. each; \$1.50 per doz.; \$10.00 per 100; \$90.00 per 1000.

Cheerfulness. No more appropriate name could be given to this brilliant novelty. Its beautiful bright fire-red or deep orange flowers appear early and continue without interruption until frost. Add to the prevailing color a golden border and center with each petal flaked carmine-crimson and you may form some conception of this fascinating variety. 3½ ft. 10 cts. each; 85 cts. per doz.; \$6.00 per 100; \$50.00 per 1000.

City of Portland. A wonderful bright rosy-pink, much deeper in color than Mrs. Alfred Conard or Hungaria; a free-flowering, vigorous grower. 3½ ft. 20 cts. each; \$2.00 per doz.; \$12.00 per 100; \$100.00 per 1000.

Fairy Queen. The dwarf, compact plants of this distinct novelty are covered with flowers from spring until fall. The plant rarely exceeds 3 feet in height. The flowers, of a clear rose-pink, are of medium size, good substance and borne upright on stout stems in great abundance. Each flower has a distinct cream-colored border.

We believe Fairy Queen will become one of the very popular Cannas. 60 cts. each; \$6.00 per doz.; \$50.00 per 100.

Flag of Truce. A large-flowered, creamy white with faint pink dots on each petal. The general effect is white. Not as white

nor as tall as Eureka, but quite distinct and valuable. 4 ft. 35 cts. each; \$3.50 per doz.; \$20.00 per 100.

Golden Eagle. A wonderful clear golden-yellow of free, upright growth. The flowers are produced in large clusters well above the foliage. 4 ft. 35 cts. each; \$3.50 per doz.; \$20.00 per 100.

Harmony. Great clusters of good-sized, well-formed Geranium red flowers are arranged on good stems in such a manner as to give the trusses an almost globular appearance. 3½ ft. 20 cts. each; \$2.00 per doz.; \$15.00 per 100.

Peachontas. (Bronze-leaved Olympic). Large oriental-red flowers borne on firm upright stems, just high enough above the foliage to show the entire head. The foliage is a dark bronze-green with emerald shadings; the ribs a darker bronze. 4 ft. 20 cts. each; \$2.00 per doz.; \$15.00 per 100; \$100.00 per 1000.

Poppy. Intense poppy-red. Large perfect florets in good trusses over greenish-bronzy foliage. Rich and effective. 5 ft. 20 cts. each; \$2.00 per doz.; \$10.00 per 100; \$90.00 per 1000.

Remarkable. This effective bronze-leaved variety stands out boldly among other sorts, not only on account of its height (6 ft.), but because of the beautiful scarlet-carmine trusses of bloom surmounting the rich green-bronze foliage. 20 cts. each; \$2.00 per doz.; \$10.00 per 100; \$90.00 per 1000.

Surprise. The brightest red Canna we have. It surpasses in brilliancy such popular varieties as Meteor and Lafayette and produces its great trusses with equal freedom. 4 to 5 ft. 35 cts. each; \$3.50 per doz.; \$25.00 per 100.

DREER'S SELECTED CANNAS

Including many comparatively new varieties, which we can offer in quantity at popular prices.

	Doz.	100	1000
Allemania (Orchid Flowered). Salmon with golden markings; 5 ft.	\$0 50	\$3 50	\$30 00
Austria (Orchid Flowered). Large, pure canary-yellow with reddish dots in center of upper petals; 5 ft.	50	3 50	30 00
Beacon. Rich cardinal-red; 3½ ft.	1 00	7 00	60 00
Brilliant. Rich yellow with two red petals; 3½ ft.	50	3 50	30 00
Dazzler. One of the best, deep fire-red, very free; 3½ ft.	1 00	7 00	60 00
Dragon. Very rich dark, ox-blood red; 3 ft.	75	5 00	40 00
Dr. E. Ackerknecht. Carmine lake, suffused with deep carmine, bronze foliage; 4 ft.	50	3 50	30 00
Duke of Marlboro. An attractive deep brilliant crimson; 4 ft.	50	3 50	30 00
Favorite. This is the best red spotted yellow Canna yet introduced. The color is a rich, deep golden-yellow, the flowers are produced on strong stems well above the foliage; 5 ft.	50	3 50	30 00
Gaiety. Reddish-orange mottled with carmine and edged with yellow. The tongue is yellow and densely spotted with carmine; 4½ ft.	50	3 50	30 00
Garam. Very large bright carmine-red flowers, freely produced; 3½ to 4 ft.	50	3 50	30 00
Gladiator. Deep yellow freely dotted with red, a popular bedder; 4½ ft.	50	3 50	30 00
Goethe. Very attractive. Bright deep orange flowers of a very penetrating shade; 1½ ft.	85	6 00	50 00
Gold Bird (Oiseau d'Or). This is the yellow companion to Firebird; the immense soft canary-yellow flowers are of good substance; 4½ ft.	85	6 00	50 00
Golden Gate. Yellow and red; 4 ft.	60	4 00	30 00
Italia (Orchid Flowered). Bright orange-scarlet, with broad golden-yellow border; 6 ft.	50	3 50	30 00
King Humbert (Orchid Flowered). The most popular Canna. Great orange-scarlet flowers surmount the vigorous dark bronze foliage throughout the season; 5 ft.	75	5 00	45 00
Lafayette. In some respects resembles the variety "Meteor" but the flowers are not quite as dark, stands more erect and the plant grows taller; 5 ft.	1 00	7 00	60 00
La France. Deep carmine pink. 4½ ft.	1 25	8 00	70 00
Lahneck. A free grower. The color is rose with lines and shadings of scarlet carmine hues, a narrow golden border adds to its beauty; 4 ft.	85	6 00	50 00
Louis Beverchon. A splendid bedder, large cochineal-red flowers; 4½ ft.	60	4 00	35 00
Maid of Orleans. Rich cream ground, mottled and shaded soft pink; 4 ft.	60	4 00	30 00
Mrs. Karl Kelsey (Orchid Flowered). Orange-scarlet, suffused and striped with yellow; 5 ft.	50	3 50	30 00

	Doz.	100	1000
Mrs. Woodrow Wilson. A rich but soft crimson-pink, with very large flowers, a robust grower and free bloomer, 4 ft.	2 00	15 00	
Olympic. Rich Oriental-red, shading lighter to the centre and dappled carmine. The individual florets and trusses are very large and of excellent form; 5 ft.	85	6 00	50 00
Panama. The color and markings of this splendid Canna are unusual; the rich orange-red face of the petals is bordered with a broad edge of golden-yellow; 5 ft.	80	4 00	35 00
Philadelphia. Rich deep red; 4 ft.	60	4 00	35 00
Queen Charlotte. Rich pomegranate-red bordered with golden-yellow; 3 ft.	85	6 00	50 00
Rosea Gigantea. Large flowers, borne in such abundance that the mass of color is amazing. A deep rich rose, almost a coral-carmine; 4 ft.	1 25	8 00	70 00
Salmon Queen. Rosy salmon-scarlet, blending to a rosy carmine towards the centre, a very effective bedder; 5 ft.	85	6 00	50 00
Scharfenstein. The beautifully formed, large round florets are produced in compact but graceful trusses. The color is a unique light red salmon with orange and carmine suffusions that forms a most attractive addition to the range of colors found in Cannas; 5 ft.	85	6 00	50 00
Schopenhauer. A rich brilliant red with yellow throat, very free; 3 ft.	75	5 00	40 00
Souv. de F. Langle. Very distinct orange-red color, edged with gold; 4½ ft.	75	5 00	40 00
Superb. Deep salmon with bronze foliage; 4½ ft.	60	4 00	35 00
The Gem. An entirely distinct spotted variety. The immense trusses of flowers are borne on upright branching stems well above the foliage, and are of deep cream or straw-yellow, spotted with deep carmine; 4½ ft.	1 50	10 00	90 00
Uhlberg. Entirely distinct, of a soft rosy-carmine; the throat of the flower is of a creamy-yellow, and the edges of the petals are also pale yellow; 3 ft.	60	4 00	35 00
Venus. Flowers of fair size, of a soft rosy pink with a pretty mottled border of creamy-yellow; 3½ ft.	75	5 00	40 00
Wintzer's Colossal (Orchid Flowered). The largest flowered Canna. The florets often measure eight inches across and are of a bright scarlet; 5 ft.	75	5 00	45 00
William Bates. A splendid free flowering yellow of good size; 5 ft.	1 50	10 00	90 00
Wyoming (Orchid Flowered). Massive orange flowers which make a strong contrast with its rich bronze foliage; 6 ft.	50	3 50	30 00
Yellow King Humbert (Orchid Flowered). A sport from King Humbert in which the foliage is green and the flowers yellow with red spots. Very attractive.	75	5 00	45 00

Entered as second-class matter December 8, 1904, at the Post Office at Boston, Mass., under the Act of Congress of March 3, 1897.

It is with pleasure that we note in the Florists' Exchange a reply to the recent editorial suggestion about the giving away of flowers to push business. We are very glad to have such matters threshed out in the trade press, for it is in this way that different opinions are obtained and beneficial results achieved. We have no desire to force home our particular individual opinions. All that we are doing is in the interests of the trade at large. The writer of the Florists' Exchange excellent article asks: "Is it not far wiser to distribute the flowers gratis than to hold them back and see them wither, fade and disintegrate, especially when every such gift can carry potential publicity that is very likely to bring future profitable sales?"

It is right here that the nub of the matter is to be found. Does the wholesale giving away of flowers promote publicity and so bring profitable sales? If it is true, well and good. It would almost pay the growers to raise flowers for the particular purpose of giving them away, and a glut in the market might be a blessing in disguise. We still adhere to the opinion, however, that the free distribution of florists' stock to people who can just as well afford to buy flowers is a mistake. We believe that it gives a false impression that flowers are easily raised or produced at small cost, and that florists make undue profits from their business. There is already a tendency to look at the industry in this way. The public knows how easy it is to grow flowers out of doors in summer, and doesn't realize that there is a great difference when it comes to growing them under glass in winter. Wouldn't the public appreciate florists' flowers much more if they understood the true facts better?

If the flowers should be disposed of at a special sale, properly advertised, and at a very low price, no one would object, and it would leave a better impression than a free distribution advertised to the same extent. It certainly does cheapen the florists' business to have the public get the idea that flowers are raised in much greater quantities than can be sold. We inevitably hear the remark, "Let them put the price low enough and we will buy them."

It seems to us, therefore, that special sales rather than

gratuitous distribution is for the best interest of the business. Not only will they take care of the surplus, but they will induce buying by people who have not been in the habit of carrying flowers home.

Now this doesn't mean that the flowers should be left to wither, fade and disintegrate if they can't be marketed. A waste is certainly to be deplored. By all means let the surplus not otherwise taken care of be given away to hospitals and churches, or better still, in the poorer sections of the city through the settlement workers. There are many florists who can remember the days in New York when great quantities of faded flowers were swept up and carted away to the river. Of course, this sort of thing is inexcusable. Let the flowers be used for charity, but do not make this a subject for publicity with the expectation that it is going to create a greater demand and so bring about profitable sales.

Perhaps we are wrong. Perhaps the plan can be worked out in one place and not in another, but in any event we believe that it should have careful consideration from all sides before it is added to the many good publicity schemes now under way.

Boston's big show the coming week will be one of the most remarkable ever staged in this country. While it will contain many important features, the orchids will naturally be the center of attraction. This will be true not only because of the lavish way in which they are to be shown, but also on account of the great pains given to the staging of them. It is pleasant to find that the interest in orchids remains unabated and that both private and commercial growers retain their enthusiasm in spite of the ruling of the Federal Horticultural Board at Washington, which makes the importation of these plants impossible. Indeed, some of the commercial men see nothing to be feared from this ruling.

Frank J. Delansky, for example, the famous orchid specialist of Lynn, Mass., believes, we understand, that orchids can be grown so successfully from seed in this country as to meet all demands commercially. In fact, he sees a tremendous development of commercial orchid growing. At the same time he no doubt is congratulating himself on having been fortunate enough to bring in several hundred orchids of different kinds just before Quarantine 37 went into effect.

The officials of the Missouri Botanical Garden concede that orchid growing is yet in its infancy in America, but they also insist that the Federal Horticultural Board has given the orchid grower some extremely difficult problems to solve. This is because Cattleyas of the Labiata type deteriorate under artificial cultivation, according to long experience. In any event it has been the custom in the past to make periodical importations in great quantities in order to maintain the supply. Now it takes five years to grow these plants from seed, and in the meantime prices must necessarily run high. Moreover, it is a question just how many growers will feel like making the necessary investment with the possibility that within the five years' limit the Horticultural Board may voluntarily rescind its action or have its rulings overturned.

If the order holds, florists no doubt will take up other types, and a considerable increase can be obtained by division. Private growers suffer especially from the exclusion order and greatly resent this order, because of the almost total absence of danger from plant pests in orchid importations. Still orchid collections will be extended so far as possible, and it is hoped that this country in the future can build up collections equal to those abroad. Some of the latter, indeed, suffered badly during the war, among the best of those in Belgium being destroyed.

Easter coming early this year, it is probable that most of the stock intended for that occasion is not much ahead of time. From now on considerable time will be necessary in getting ready the baskets, filling the pans and in other ways preparing for the Easter trade. It is important to take advantage of every bright day now to give the foliage plants a good syringing, both over and under the leaves. This will help to control insect pests, but if there is a bad infestation it will be necessary to sponge them with an insecticide. Repotting will soon be in order, the old soil down to the active roots being removed. Have plenty of well enriched potting soil to take its place, and don't forget the necessity of having perfect drainage. This is most essential with all foliage plants.

Seeds of Primulas may be sown from now on until May, and a succession is important because it keeps the flowers coming along in batches instead of having them all come at the holiday season. When the seeds are sown use a light mixture of loam, leaf mold and sand. Do not sow the seed too thickly and cover very lightly, afterwards firming the soil well. The pans require a warm house and should be kept covered with glass until they germinate. After that a temperature of fifty degrees at night will be about right, but get the plants as near to the glass as you can, and when they are large enough to handle prick them out into flats.

Feverfew always sells to some extent, and a little space may well be

devoted to it, preferably using a solid
bed. If you can get small plants now
—and they are being offered to the
trade—plant them out at once if you
want them to flower late in May and
through June. Space the plants a foot
apart and grow them in a cool house.
In some sections Feverfew in pots sells
well in the spring when a customer is
liking them for bedding.

It is time to get in orders for bed-
ding stock which is none too plentiful.
In some sections there seems to be a
shortage of geraniums. This doubt-
less will mean a heavier sale of cannas,
petunias and begonias. As a matter
of fact it would be just as well if cus-
tomers could be induced to use a
wider variety of stock. Many florists
are growing the yellow Polyanthus this
season, perhaps for the first time.
There should be a good market for
them at Easter. As a matter of fact
these flowers sell well both potted and
as cut flowers. Remember that they
need to be grown cool and given plenty
of water. If you keep them in a warm
house, and especially if the atmosphere
is dry, you will have few flowers, al-
though an abundance of foliage. The
temperature of a violet house is best
for them.

Hydrangeas for Easter should be
well along by this time. Color should
be showing well, and if not you had
better give a little more heat to hurry
them along. Don't forget the neces-
sity, however, of hardening off these
and other Easter stock which has to be
forced quickly. You need not worry if
you do not sell all of your plants and
most of the other stock at Easter. You
will still have Memorial Day for a
market, and there is every reason to
believe that there will be a big demand
for potted plants all through the
spring. In any event you can't go
wrong with French Hydrangeas, for
no one can question their increasing
desirability or their value as a sub-
stitute for azaleas.

PLANTS FOR EASTER.

Lilies should now be standing well above the foliage. Keep the night temperature at 60 degrees. Water freely and spray the foliage three or four times a day. Lilies will be worth just 100 per cent more than in former years, so do not fail to give them the attention necessary to have them in flower. If you cannot discern the buds among the foliage, now is the time to resort to hard forcing. Run the temperature up as high as possible, water with warm water and syringe with warmer water, almost hot, says the Canadian Florist. Keep the plants free of aphids by fumigating or spraying. Do your hard forcing now, so that you may have a few days to harden off your plants before selling.

Hyacinths for Easter should be kept in the coolest house possible. Very nice pans of these can be made up from boxed bulbs. Prepare all you can in assorted sizes. If you have a cash and carry trade, it may be well to have a good lot of four and five-inch plants, but if you have to deliver, it will not pay to sell low-priced plants.

Hydrangeas should be kept well supplied with moisture. If your stock is backward, keep them at 60 degrees at night. Give gentle feeding at least twice a week. These plants need plenty of room, if you want the best stock for the holiday. I think hydrangeas should be sold with a cultural direction card attached. In fact, all plants should be sold that way.

Baby rambler roses will for the most part come into bloom in a carnation temperature, but perhaps the variety Orleans will need some forcing—say 60 degrees at night. If your ramblers are pot grown,—that is to say, if they have been in pots since last spring they will come along nicely for Easter. Keep moving them at least once a week, giving a little more space at each move. Cuttings can be taken now, rooted, and planted out next spring. When grown on for two summers, pot up and force them.

Pelargoniums will make good Easter sellers this year. These are best finished on shelves in a cool house. Fumigate regularly for aphids and give light feedings once a week. Ventilate freely.

Pansies—Large plants lifted last fall and wintered very cool make nice subjects to put up in baskets.

A few of the hard-wooded shrubs are very decorative in a store at Easter, but do not as a rule sell readily. This year, being the peace year

THE GROWERS' MEETING.

The following letter is being sent to the growers of Greater Boston:

March 9, 1920.

Dear Sir:

You are earnestly requested to be present at a meeting to be held at 7.30 o'clock P. M., Tuesday, March 23rd, at the American House, Hanover street, Boston, Mass.

At this time Mr. J. F. Ammann of Edwardsville, Illinois; W. R. Pierson of Cromwell, Conn., and others will address the meeting relative to forming a branch of the National Flower Growers' Association.

At a meeting last January, held in Chicago, a preliminary organization was formed to report at the S. A. F. Convention next August, at Cleveland. This organization is to be composed of Growers of Cut Flowers and Plants ONLY, for the mutual benefit in a large way that only a National organization can accomplish.

Whether interested or not, you should be present and listen to what these men of national repute have to say, who at their own expense, have come to talk to us about what may be accomplished by organization, such as:

The stabilizing of prices by mutual co-operation in national and local advertising.

To protect its members against unjust and unlawful exactions; the corrections of abuses; to protect against enactment of damaging laws which may be proposed by those unfamiliar with the requirements of the trade, and the collection and dissemination of this information.

This meeting will be interesting and of personal benefit to each and every one, whether a large or small grower.

Don't forget the date! Tuesday, Mar. 23rd, 7.30 P. M., American House, Boston, Mass.

Very truly yours,
E. ALLEN PEIRCE,
T. ROLAND,
W. H. ELLIOTT,
W. SIM,
W. C. STICKEL,
A. CHRISTENSEN,
S. J. GODDARD,
Local Committee.

The Lord & Burnham Co. has adopted a profit-sharing plan, the details of which have been printed in pamphlet form and will be distributed among the employees of the concern. It gives the company seven percent annual interest on its investment; the remainder of the profit will be divided between the company and the employees. The employees will then be entitled to common stock to be paid for from the dividends of the individual.

Little Talks on Advertising

The easiest thing to do when writing advertising copy is to deal in glittering generalities, but the easiest way is not the best way to sell goods, whether they be flowers or tack hammers. The public likes concrete facts, and you can get its attention much quicker by playing up one single kind of plant or flower than by running through the list of all the different kinds your store contains. That's why the advertising shown on this page today can be set down as a good piece of copy. The eye is caught in one specific article and the brain considers what the eye sees without being confused by a multiplicity of objects. This leads it to think about this particular flower, which leads to a belief that it is needed to brighten the home.

Another point about advertising which is not commonly realized perhaps, is that the public likes big figures, and analysis of advertising factors has shown that any announcement of a large quantity of a given article being put on sale immediately brings about a largely increased demand. It isn't necessary to go into the psychology of the matter, but if the florist can announce that owing to certain conditions he will have several thousand carnations on hand the next day to be disposed of immediately, that a special price is being made to move them, he need have no worry about making his sales. I once heard an article on the flower industry criticized because it had so much to say about the large numbers of flowers and plants raised and sold. As a matter of fact, this sort of thing is good for the trade, if advertising experts are correct. It leads the public to accept the business as one carried on in a large way, thereby dignifying it in its estimation and putting it on a higher mental plane.

I like the way in which the Yuess Garden Co., of Newburgh, N. Y., makes an appeal to the public. To begin with they use the slogan, "Say it with flowers," conspicuously across the top. Underneath is a cut showing the head of the house bringing home a box of roses, which is being welcomed with enthusiasm by the good wife. The advertising then goes on to say, "In these days of rolicking prices of just about everything under the sun flowers offer the most reasonable and the most pleasing of all the remembrances you can take or send to the loved ones at home." The pleasantly intimate phrasing of this advertising makes it good reading. Of course the criticism may be made that it does not conform to

Best Adv. We Have Seen This Week

the requirements stated above in that it speaks of flowers in a general way. Nevertheless the box filled with roses fixes the thought of that particular flower in the mind of the reader.

The Rhinebeck Floral Co., of Rhinebeck, N. Y., is using five or six inches of double column in a series of weekly chats on things horticultural. It makes surprisingly attractive copy, and with an original method of treatment keeps the name of the concern in the mind of the public all of the time, which is good advertising when regular space is being used and general publicity is the aim sought.

It must always be kept in mind that advertising is divided into two kinds. One aims to associate a certain name with a certain article and necessitates constant reiteration. The other seeks

the sale of particular goods at a special time which requires a definite statement as to what is offered, preferably with an explanation of the special sale and a quotation of prices when possible. If a little study is given to this matter it will save the advertiser money and help to make the advertising appropriation go farther.

MR. AMMANN'S BOSTON VISIT

Mr. Fred Ammann of Edwardsville, Ill., will address the growers of Boston and vicinity at The American House, Boston, on March 23 at 8 o'clock p. m. under the auspices of the Flower Markets, on the organization of a growers' association.

Mr. Ammann is a very forceful and entertaining speaker and the committee hopes that a large number of growers will be on hand to welcome him.

It is planned to start a local organization to affiliate with the National Association when that body is permanently organized. The local committee is composed as follows: William C. Stickel, S. J. Goddard, A. Christensen, William Sim, Thomas Roland, E. A. Peirce and W. H. Elliott.

Remember that in unity there is strength, so let us have a large and representative gathering to get a good start for our own protection and for our profession in general. Every one welcome.

Signed for the local committee,

S. J. GODDARD,
E. ALLAN PEIRCE.

AMERICAN GLADIOLUS SOCIETY

Objection having been made against registering the varieties, Conspicuous and White America, the same are hereby withdrawn pending further investigation by the committee.

BOSTON'S ORCHID SHOW.

Next Week's Event Will Be One of Great Importance.

Horticultural Hall, Boston, is undergoing a transformation in preparation for the great Orchid Show to be held there from Wednesday to Sunday of the coming week. The Lecture Hall, in which will be installed the great exhibit from "Orchidvale," the private estate of Albert C. Burrage, has been painted a neutral green, against which the brilliant colors of the flowers will be seen to the best advantage. The red brick walls of the small hall have also been given a neutral tint. Inside the Lecture Hall, great wooden columns are being erected, which when covered with bark, will form the trees of a tropical jungle into which the place will be converted. The orchids will be shown as they naturally grow upon these trunks. The plants will be selected from about twenty-five thousand in Mr. Burrage's greenhouses, the largest private collection in the country.

In the main exhibition hall, a platform has been built fronting the loggia steps, on which will be displayed a marvelous collection of Kurumee azaleas from the Arnold Arboretum of Harvard University. With the exception of a few plants shown at the Panama-Pacific Exposition in 1915 no exhibit of these azaleas has ever been made in America or Europe, they are now being prepared for the show on the private estate of Charles S. Sargent of Brookline. The plants show no leaves but the flowers vary from white to pink, rose, cerise, lavender, mauve, magenta, salmon, vermilion, bright red to deep scarlet. These plants were secured at great expense in Japan and were originated by a Japanese gentleman, named Motozo Sakamoto in the city of Kurume about one hundred years ago and the parent plant from which these descended is still living. The Sakamoto collection, after his death passed into the hands of Mr. Akashi, from whom Asst. Director Wilson of the Arboretum secured these plants.

In the same hall another stand, in form a lunette, is being erected, on which will be shown a magnificent display of orchids from the greenhouses of Julius Roehrs of Rutherford, N. J.

On either side of this azalea exhibit will be arranged specimen plants of acacias from the greenhouses of Thomas Roland of Nahant. Their yellow and green colorings forming an admirable frame for the richly-colored azaleas, behind which will be placed a screen composed of palms

and regal lilies contributed by John K. M. L. Farquhar. One hundred bulbs of this new and beautiful lily, valued at a dollar apiece, will be given each day to the first hundred visitors to the show.

Applications for space indicate that the halls will be more than filled.

During the show several important lectures on orchids will be given, as follows:

Thursday, March 25—Oakes Ames. "Basis of Orchid Classification." E. H. Wilson. "Geographical Distribution of Orchids."

Friday, March 26—W. A. Manda. "History of Orchid Culture in the United States." John E. Lager. "Collecting Orchids."

Saturday, March 27—Geo. P'Anson. "History of Orchids in England."

The Orchid Show will be open Wednesday, March 24, from 12 M. to 10 P. M.; Thursday, Friday, Saturday, March 25, 26, 27 from 10 A. M. to 10 P. M.; Sunday March 28, from 1 to 10 P. M.

The judges at the show will be Samuel J. Goddard, Framingham; Donald McKenzie, Brookline; Frank J. Dolansky, Lynn; Edwin Jenkins, Lenox; Joseph Manda, W. Orange, N. J.; John E. Lager, Summit, N. J.; A. J. Lovelless, Lenox; and Clement Moore, Hackensack, N. J.

REGISTRATION OF NEW ROSES.

Frederick R. M. Undritz, West New Brighton, S. I., N. Y., has requested permission of the Executive Committee of the American Rose Society to change the name of the variety of rose registered by him August 23, 1917, as Frederick R. M. Undritz to "General John Pershing." Inasmuch as this rose has not yet been disseminated, the Executive Committee of the American Rose Society voted to allow this change of name. Unless objections are received in the office of the Secretary of the Society within three weeks of this publication, the registration will become permanent.

General John Pershing. H. W. Dr. W. Van Fleet x Mrs. W. J. Grant (Belle Siebrecht). Climber; foliage same as Dr. W. Van Fleet; very vigorous, perfectly hardy; flower double, four inches in diameter, dark pink, center projecting, medium long, quite fragrant; bud pointed and firm; fifty-three petals, curved, stiff, center close; blooms profusely in June; may bloom later; lasting quality, on bush five or six days.

Secretary American Rose Society.

George Watson's Corner

"You in your small corner and me in mine."

The irrepressible Daniel V. Allen late champion of several things of the Florists club is back on the job again. Some six years ago he made a trip to Europe and did so much business selling chemicals and the like that he retired and bought a home in that quiet resort Atlantic City. Now he has opened up again in Philadelphia as Allen & Co., Exporters of Chemicals at 238 Arch St., and from all accounts is rapidly making another fortune. Men of his stamp don't retire. They only think they do, for the moment. They

can't resist the glamour, and roar, and excitement of doing things—especially if "there's millions in it."

Charles Sim has been confined to his home at Rosemont the past three months but is able to be out once more and is looking well. He is arranging for a sea voyage to Scotland in the near future and expects to stay there most of the summer. His business in the meantime is being ably managed by his nephew Mr. Edwards.

"The Kirk" now meets every Friday at 12.45 noon at Dooners, 10th and Chestnut St. A modest collation is served, and conversation is permitted within reasonable bounds. The ruling elder Commodore Westcott handles the gavel; but he is easy, and is always glad to see any of his old friends who can drop in at that hour for their noon lunch and a chat. The cook is great on Pinnan Haddie that day, also pretty good on English Bloater. If you like a New England platter a la Providence,

R. I. you can have that also. Remember, once a week, every Friday, 12.45.

In Glasgow, Scotland, Chateau and Richmond are about the only roses grown for cut flowers. In Buenos Ayres, Argentina, Druschki is about the only one. At this distance it seems remarkable that these two great horticultural centers are unable to give their patrons a little more variety from the thousands of beautiful roses available. Dickson surely has a map and can find out where Glasgow is. The steamers must reach there once in a while. I am told that a boat touches even at St. Kilda once a year, and St. Mungo cannot be much harder to get at. We are not so surprised at the Argentinians—as the way to Hamburg has been blocked for a long time. It is up to Robert Pyle and J. Horace to get after them.

William J. Muth, Philadelphia representative of the King Construction Co., has sold his property in Lansdowne, and moved with his family to West Chester.

Alfred M. Campbell is not only proud of his big showing of Easter lilies—fine as they are, but wants to call the attention of the trade to his Hydrangeas and other holiday offerings, which are also extra fine, and just right. His growers at Strafford deserve great credit. Take a run out. There are trains every half hour or so and it's only a ten mile trip.

William J. Leonard, the noted Lansdowne rose grower has returned from an extended sojourn among the palm groves of Palm Beach and other parts of Florida, looking hale and hearty.

GENERAL NEWS NOTES

The Allied Florists' Association of Chicago has elected the following officers: President, George Asmus, Vice-president, August Poehlman, Treasurer, William J. Smyth. Additional Directors, August Lange, John Michelson, Paul Klingsporn, Eric Johnson, Otto Amling and Peter Pearson.

A new store has been opened at Columbus, Ohio, by the Acme Flower Co. W. C. Holstein is the manager, while F. E. Stoughton is treasurer.

ORCHIDS, GARDENIAS, SWEET PEAS, VALLEY

ARRANGING EASTER BASKETS.

With Easter but a few weeks distant, the florist should be engaged in his spare time in taking stock of his baskets and renovating them as far as possible. Some of them will no doubt require a fresh coat of paint or bronze, while others will be in need of repairs, such as new linings or new handles, to replace broken or damaged ones. After the present stock has been rejuvenated, he will then be in a position to order whatever new baskets he may deem necessary to complete his stock and give him the assortment which buyers of to-day demand.

As Easter draws nearer, certain flowers, now quite plentiful, will become scarce, while other varieties now scarce will be plentiful. In order to select his Easter stock the florist must watch the market carefully for the next few weeks and place his orders for the flowers he expects to sell at that time. Care should be taken that the flowers ordered, are suitable for arranging in the particular baskets to be used, in respect to general size, shape and color.

In placing cut flowers in the different baskets, they should be arranged so as to present the greatest variety possible with the flowers on hand. For instance, some could be filled with violets, sweet peas, mignonette, forget-me-nots and roses in different formations, while others might have the addition of a few daffodils or pussywillow sprays. Others could be made up with roses and asparagus fern. Several of this type should be used showing different varieties of roses. A large bunch of violets with a red or pink rose in the centre and trimmed with adiantum fern and placed in a basket is an admirable gift, as the violets may be lifted out and worn as a corsage. Gold bronzed baskets of calendulas or daffodils with fern and pussywillow sprays make a good basket of the less expensive type. Few special Easter novelties ever meet with favor. I believe that the only two used to any extent are the painted figure of a girl with a metal container attached for holding roses, sweet peas or violets, and the painted representation of an egg with a young chick at one side, also supporting a holder of sufficient size for about a dozen flowers.

THE BOILER OF Unequalled Fuel Economy

Kroeschell Boilers, the best by test since 1879. Forty years' experience.

THE QUALITY PLACE OF BOSTON

Regarding the Kroeschell, it is the best we have ever had and satisfactory beyond our expectations. It heats up especially quick and has saved us considerably already in the price of fuel. When we are in need of another boiler we will give the Kroeschell the first consideration.

(Signed) WM. W. EDGAR CO.,
WAVERLEY, MASS.

No Masonry—No Tubes

TUBELESS BOILER

Kroeschell Bros. Co., 466 W. Erie St.
CHICAGO

When You Buy—Get a Kroeschell

1,016,286 sq. ft. of glass was equipped with Kroeschell Boilers during the year of 1916.

OHIO'S CELEBRATED CYCLAMEN SPECIALIST

After using your No. 12 Kroeschell Boiler I came to the conclusion that had I to install more boilers it would be the Kroeschell and no other. It really is a pleasure to heat, no trouble to get the desired heat in a very short time.

(Signed) CHRIST. WINTERICH,
DEFIANCE, OHIO.

DAYLIGHT SAVING.

Editor of HORTICULTURE:

The writer of The Talk of the Trade in your issue for March 6 (which under our splendid Boston mail delivery reached me as early as 4 P. M. March 9) seems somewhat mixed on daylight saving. He starts off by practically asserting that florists oppose the plan. If your correspondent attended meetings of florists' organizations he would have known that at largely attended meetings of the Gardeners' and Florists' Club of Boston and the Boston Florists' Association resolutions supporting daylight saving were unanimously adopted. About all the leading growers around Boston to my personal knowledge belong to one or the other of these bodies. Can this opponent of the proposed change name a single florist or agricultural body which has placed itself on record as against daylight saving?

There are always exceptions to every case, no matter how excellent, and I don't for one moment doubt that growers are to be found who oppose the proposed reform, but I have studied this matter very carefully and talked it over with a great many of our largest and best growers and everyone agrees that they favored daylight saving.

The statement that rose growers opposed the plan as they had to cut buds tighter in the afternoon is not very convincing; the fact is lost sight of that this is more than offset by the earlier attention the flowers will get in the morning under the new plan, at least that is the way it appeals to large growers like W. H. Elliott.

What outdoor crops are there that the florist grows which are in any way harmed by daylight saving? The two principal arguments advanced against this measure are deceptive. As I happen to have occasion to handle 75 tons of hay each year and 100 tons of silage, besides growing some acres of vegetables and fruit trees, not to mention flowers at all, and use on an average two tons of poison in fighting insect pests, I can speak from practical experience and state that with

with long lease.

Profits for 20 years have averaged better than \$10,000 yearly.

H. F. LITTLEFIELD

WORCESTER, MASS.

greatly depleted help and other handicaps, daylight saving has not hindered our work. When your correspondent continues "that those who are in favor of it are, generally speaking, in favor of it purely through selfish motives," he shows an effrontery and ignorance truly pitiful. Might not anyone just as accurately state that the small majority opposing daylight saving are selfish for opposing what 90 out of 100 people demand?

It would be better if we had a national law for daylight saving rather than have various states and cities adopt it. Our Washington politicians are too busy trimming their fences for next November's elections to give much consideration to measures of this kind, but a national daylight saving will yet call and I venture to say none will appreciate it more than your critical correspondent, and he can rest assured that railroads will be very glad to adapt their time tables to what the overwhelming mass of the people demand.

More than double the population of the United States lives under daylight saving law in Europe. Great Britain is making it a permanent reform by Act of Parliament after using it twice as long as we have. France now uses it from February 1 to October 25, and

other European countries are continuing it because it increases production, decreases fuel consumption and makes for the physical betterment of their people. Out of 2171 physicians polled in Massachusetts, 1917 favored daylight saving and only 254 opposed it, a good proportion of the latter country physician, and giving as their reason that "farmers are opposed." Only thirty-five physicians are of the opinion that it interferes with children's sleep. Isn't such testimony worthy of some consideration? Would your correspondent so far "talk through his hat" as to state that they also favor the measure "purely through selfish motives?"

THE BEST FLORISTS' DAHLIAS.

J. K. Alexander Gives the Result of His Experience.

With constant improvement in the form of the dahlia, it is gaining rapidly as a florists' flower, and proves to be one of the most reasonable for the florist to produce.

They blossom in the fall, when most other flowers have ceased to bloom, and the newer creation seems to take well for home decoration, and makes up well in pieces.

"Maude Adams" of the old double form, seems to be the most popular from every stand point, producing its blossoms in great abundance, and being a very popular color, pure snowy white, daintily overlaid a clear delicate pink.

"Madonna" seemed to take among the best in the Boston market last fall, it being entirely different from the double type, with long quilled and curling petals. It is not pure white, but the touch of delicate lavender-pink adds greatly to its value in floral work.

The finest scarlet on the market is "Mina Burgle," a perfect decorative dahlia, with good stems, good habit, and the brilliant crimson-scarlet one wants in a good bright color. It is far superior to the well known "Lyndhurst," being more brilliant, larger, and more abundant with its blossoms.

In Hybrid Cactus Dahlias "Bianca" seems to be a marvel, giving us stems of length and stiffness, which has prevented the Cactus Dahlia from being anything exceptional as a cut-flower.

It is a rose-lavender with a shading towards white in the center, the first impression being soft lavender-pink.

Another good Hybrid Cactus Dahlia that comes from Holland, and is the best white of the new varieties is "Mrs. Warneer," a large Peony-Cactus. Late in the season it shows the beautiful golden yellow center.

"Storm King" will always be the popular white double, and leads all the others; although White Swan and Robert Broomfield are still considered good by many florists. All three are reasonable in price, making them popular.

On the salmon-pink and autumn shades, that seem to be so popular "Hortulanus Fiet" is one of the most desirable among the giant decoratives. It has won a favorite place in many gardens already, and promises to have a great future.

For an early blossoming variety "Frank A. Walker" seems to lead them all. It is a new decorative, of lavender-pink, and has been my first dahlia to blossom for several years. It is not only an early but a continuous bloomer, and has good long stems.

Among the true Peony-flowered dahlias the fluffy pure white "Queen Wilhelmina" is a continuous bloomer, and in pink "Rose Gem" which is new, promises to be fully its equal.

A banquet will be held at the Parker House next Wednesday evening at 6 o'clock, to be attended by people interested in horticultural matters who are called to Boston by the spring show at Horticultural Hall. Mr. Wilson of the Arnold Arboretum will preside. The tickets will be \$5.00 each.

FLORISTS IN BRAZIL

Greenhouses Are Just Being Introduced in That Country.

A writer for the Horticultural Trade Journal, the English paper, has been making a trip through Brazil and writes entertainingly about conditions in the flower industry there. Among other things he says:

"Last but by no means least I must mention the Flower Trade. Where there is wealth there is luxury, and where there is luxury there are flowers. There is no doubt about the wealth of Brazil and this seems reflected in the love of flowers. The whole culture of flowers is in the open, practically no glass is at present found in Brazil. One or two of the most up-to-date men are, however, just making the discovery that they have to go in for glass if they wish to keep ahead of their competitors, and I think the next few years will see a great change in the mode of cultivation. There appears to be no wholesale growers as we understand the term, the smaller florist sells his goods at home or at the stalls of a small flower market, which is to be found in the largest cities, but where the bulk of the business is retail.

"All the larger growers produce flowers for their own shop or shops exclusively, and as their aim seems to be to grow enough to satisfy the demands on exceptional days, they appear to have a lot of waste on sale on ordinary days. The prices charged are, however, such that they can stand a lot of waste and yet do handsomely. Much money is spent for floral work in times of joy as well as sorrow.

"I happened to be at San Paulo for "All Saints Day," when there is not a grave left without its flowers, and when there is not a florist in the country who does not work overtime, most of them pegging away the last 36 hours at a stretch. In this town I also saw many designs executed in exquisite style, of which some of our best florists need not be ashamed. The flowers grown are in the order of their respective importance, as follows: Roses, Carnations, Gladiolus, Orchids, Watsonia, Lilium longiflorum, Callas, Violets, Dahlias, Chrysanthemums, Hydrangea hortensis, Gardenias, Scabiosa (Annual), Shasta Daisies, Amaryllis, Camellias, Stocks, Asters, and various other things in smaller quantities; Asparagus plumosus, Sprengerii and Lutzii as well as Adiantum are grown in quantity also, the last shaded in lathe-sheds."

Show Dahlia Helen Hollis

RAMBLING OBSERVATIONS OF A ROVING GARDENER

I am interested to note that the American Seed Trade Association is to launch a campaign similar to that carried on for the past two years by the American Nurserymen's Association to increase the planting of flower seeds. The Association has organized a National Garden Bureau which will have headquarters in Chicago and a publicity manager who will carry on an advertising campaign as well as secure the publication of the garden articles in papers and magazines the country over. An effort will be made also to obtain the support of Garden clubs and educators. With all the different branches of horticulture working for the common interest of making America bloom from ocean to ocean, the demand for horticultural products of all kinds ought to be widely increased.

And quite apart from the commercial end of the campaign, it will be a matter of satisfaction to flower lovers everywhere to find more gardens being made and more flowers grown, for a country filled with flower growing enthusiasts is more likely to escape the dangers incident to great social upheavals.

I notice that Conard & Jones in their catalogue for 1920 are listing the so-called German iris under the name of Fleur de Lis or Liberty iris. A change of this kind was warmly advocated during the war, just as many growers thought that Frau Karl Druschki and other roses with German names should be rechristened. It will be interesting to learn how many of the other growers follow this cue as regards the iris. Really there is no reason why it should be called German, for it is just as much a native of France, but when conditions settle back into the old rut, it is sometimes difficult to carry through an innovation of this sort.

I also find that Conard & Jones are listing the new iris Sherwin Wright, which was introduced by Dreer from England just before the war. Probably no other iris has so perfect a golden-yellow hue, so that it becomes most desirable for garden culture.

On several occasions I have had something to say about seedsmen who have gotten out catalogues of unusual beauty. Now I wish to pay a tribute

to the skill and good taste of Richard Diener Co., of Kentville, Cal. While Mr. Diener's catalogue is not a large one, and is confined to comparatively few subjects, namely, gladioli, dahlias and petunias, it is a veritable work of art. The colored illustrations, and especially those of the frilled petunia Earl of Kentfield, can hardly be surpassed. The colored illustration of Diener's Ruffled Monster Petunia on the front cover is splendidly done, and the individual reproductions of gladioli forming a full page centerpiece constitute a very unusual feature of catalogue embellishment. Altogether the catalogue is one of which Mr. Diener may well be proud.

THE MARKET

During the past week the market has stiffened perceptibly, which has brought about an easier feeling all along the line. The way prices tumbled the week before was most disconcerting. But there is every evidence that there will be a general rallying from now until Easter. This doesn't mean that flowers are short or prices high, however. As a matter of fact, the market in all the cities reporting is thoroughly well supplied. Prices do not differ greatly from those of a week ago.

Roses in Boston are selling from \$4.00 to \$20.00, which in the poorer grades is a little below that of some other cities, especially Pittsburgh. Ophelia and Columbia are selling well towards the top when the quality gives them an opportunity. As it happens,

high quality has not been a strong point in roses this season. In most of the markets carnations sell freely at six cents. Callas have dropped to the low point of \$1.00 and \$2.00 a dozen, with a somewhat higher price for very fine cuts. The big old-fashioned callas do not seem nearly as attractive as in former days when compared with the neater Godfreys which will soon have the market alone. Sweet peas have sold as low as 50 cents in Boston.

Snapdragon in Boston and in other markets run from 75 cents to \$3.00. Practically none have been offered in Pittsburgh the past week. Freesias are getting scarce and Stevia is gone. Violets show no improvement. You can buy plenty of them at 50 cents, although they are commonly rated at \$1.00. Daffodils and tulips are being offered sparingly and sell readily.

BOSTON

The regular meeting of the Boston Gardeners' and Florists' Club was held in Horticultural Hall, Tuesday night. The attendance was not large, but those present were given a very interesting talk by Mr. John Watson, of Princeton, N. J., secretary of the National Nurserymen's Association. Mr. Watson, who is an unusually easy, pleasant speaker, talked freely about the present nursery conditions, and dwelt especially on the handicap created by quarantine 37. He said that if the present tendency was not checked the chances are that before long there would be so many quarantines between the states that it would be difficult if not impossible to carry on the nursery business at all. He thoroughly believed that some active effort should be made to check this disposition on the part of the state authorities to pile on quarantine measures on the slightest excuse.

FERNS

THE VICTORY FERN (*Nephrolepis victoria*)

We take pleasure in offering this new and valuable variety of *Nephrolepis*. It is a beautifully crested form of "Teddy, Jr." with fronds frequently subdivided on the ends, making a most unique, distinct, and desirable variety.

This fern was

AWARDED A BRONZE MEDAL

at the S. A. F. Convention at Detroit in August, 1919. The judges of the award reported as follows: "Special stress is laid on the new fern Victory, with a rapid growth and a branching at end of fronds, making it a shapely plant. It should be a commercial success, and we **RECOMMEND IT MOST HIGHLY.**"

NATIONAL PUBLICITY CAMPAIGN.

At a meeting of the Publicity Committee held in New York on March 18, the Committee gave instructions that arrangements be made to cover magazine advertising until September to the extent of \$20,000. This was an amount much less than it was anticipated could be spent as funds had not come in as the committee had a right to expect they would. They believed, however, that the slogan "Say it with Flowers" could be maintained, special flower days taken care of, and impetus given to regular daily business with a proper use of the money. They had hoped to have had twice as much available at this season, and they would have had it had the now very large army of non-subscribers responded to the appeals so constantly made to them.

There was a very large attendance of the trade at the flower show held in New York during the week the Publicity Committee held its meeting. The campaign work was the subject of conversation among the many little groups gathered at different times in the Grand Central Palace, and it was generally agreed that it was wrong to call one who had subscribed to the Publicity Fund a contributor, he should be called an investor, because his subscription was an investment rather than a contribution. All were greatly pleased at the result of the campaign so far, and expressed themselves as willing to go the limit in their support.

The Von Tilzer song, "Say it with Flowers," is now, we are informed, to go out as a phonograph record through one of the big companies. Judging from its reception everywhere, as a vocal number, the sale for it as a record should be large, and the publicity for the slogan immense and lasting. This is only one of the sources for publicity of a valuable sort which our committee has been able to promote, and which costs us practically nothing.

Have you thought anything of our billboard proposition yet? Spring is here, and the ground is being opened everywhere. Very shortly that never ending line of travel past your establishment, if you are on a good highway, will begin to move for the season, and a billboard properly displayed would add to our publicity a good deal, and, incidentally, identify

you as an up-to-date florist. About one hundred signs have already been placed, and there are more to go out.

The cost of a sign is \$50, and is well worth the money if used only to hide a bit of unsightliness.

JOHN YOUNG, Secy.

1170 Broadway, New York.

MEETING OF NATIONAL PUBLICITY COMMITTEE.

A meeting of the Publicity Committee was held at the offices of the Society, 1170 Broadway, New York, on Thursday afternoon, March 18th, at which were present Chairman Henry Penn of Boston, Mass., George Asmus, Chicago, Ill., C. C. Pollworth, Milwaukee, Wis., Wallace R. Pierson, Cromwell, Conn., J. P. Ammann, Edwardsville, Ill., Major P. F. O'Keefe, Boston, H. V. Swenson, Chicago, and Secretary John Young, New York.

Major O'Keefe submitted a copy for a broadside, which, meeting the approval of the Committee, he was authorized to send out.

Mr. Asmus moved, and the motion was seconded by Mr. Ammann, that the sum of \$20,000 be appropriated for advertising in the magazines during the period ending with September. A roll call vote was taken on the motion, and it was carried unanimously.

to make the necessary arrangements.

Mr. Swenson was given the floor to explain a proposition he had made to handle all the dealers' helps used in the campaign from his office in Chicago, including a drive on the stickers, posters and folders for Mothers' Day. After some discussion, Mr. Ammann moved that Mr. Swenson's proposition be accepted; that all the Promotion Bureau stock be turned over to Mr. Swenson at his Chicago office, and that he should render to the Secretary promptly each week an account of all sales made; and that the Secretary, or other authorized person, have access to sales records at any time for the purpose of checking accounts; that Mr. Swenson shall also submit at the annual meeting of the Publicity Committee a regularly audited report in detail covering sales and royalties due for the year's work; and that on the twentieth day of each month Mr. Swenson shall forward to the Secretary's office all monies collected on account of sales; and that a committee of three be appointed to draw up a contract with Mr. Swenson on the terms arranged. The motion was seconded by Mr. Pierson and carried. It was also arranged that Mr. Swenson handle this business under the style "Florists' Publicity Service Bureau of the S. A. F. and O. H.," and that all cheques be made payable to the Bureau.

THE TALK OF THE TRADE

It is interesting to follow some of the experiences of chrysanthemum growers in fighting midge. I have been fortunate in being able to look over a lot of mighty nice chrysanthemum stock handled by a grower who uses every precaution possible to keep this trouble in check. I have come to the conclusion, however, that speaking in a general way a grower is not entirely safe in thinking that he is absolutely clean and free from this pest. You may not see any evidence of it; you may look very carefully and find no trace whatsoever, but the only safe thing to do is to continually fumigate during the entire year. Use cyanide if you wish, but don't think that a good strong dose today and another a month from now will answer the purpose; it won't. Fumigate often and continually.

Tobacco paper or the nicotine extracts on the pipes or burned by the use of lamps are very satisfactory. Again I say you must keep at this fumigation, and when I tell you that in two or three days this insect will develop to its mature age and be able to deposit eggs, you will understand that this is important.

I know of one grower who fumigates his stock plants every second night. Another interesting point is that midge is easily killed, more so than aphids. This is proved by the fact that at times you will find the aphids on chrysanthemums alive and healthy and the midge killed. As I said before, don't think that at any time your stock is entirely free. Keep up the fumigation and you will keep your stock in such condition that it will produce results and you will not get

into any trouble if you sell cuttings. If you buy cuttings, give them the same careful attention. In a nutshell this all means that the midge on chrysanthemums does not need to be feared to the extent that you should throw your stock away if you find it is infested. Clean it out and keep it so and you will be all right.

Another interesting point. Some have thought that growing chrysanthemums out of doors and carrying them over winter would eliminate this trouble. Of course, all varieties will not winter over out of doors, but some will, and it is those I have in mind. This outdoor treatment will by no means assure you of having no midge. As this insect deposits eggs below the ground as well as above, it would seem that freezing does not kill the eggs, so that means again the one simple cure and preventative, continuous fumigation.

A House of Cattleyas

GROWERS ORGANIZE.

Largely Attended Meeting Held in Boston.

The growers of New England east of Worcester, Mass., met in the American House, Boston, on Tuesday evening, to consider the formation of a local branch of the National Growers' Association to be formed at the meeting of the Society of American Florists in Cleveland next August. About 60 growers were present and much interest was shown.

Mr. W. C. Stickel acted as temporary chairman and introduced Mr. J. Fred Ammann, the National secretary. Mr. Ammann spoke at considerable length, outlining the plan of the new organization and the reasons for its formation. He said among other things that all other industries were organizing, that labor was organizing, and they would have to organize in order to combat organized labor in the future or they would lose their help who would enter other skilled trades. This is the only organization started which has been unanimously endorsed by the Executive Board of the S. A. F. Mr. Ammann also said that 90 per cent. of the capital of the florist business was invested by the grower, and that 90 per cent. must be protected.

The country is to be divided into twenty locals, each local to have a representation of five men. Mr. Ammann said that they would also make it their business in the future to have the association endeavor to stop quarantines, etc., in the embryo state in Washington before they got their growth.

Mr. Wallace R. Pierson was next introduced by Mr. Stickel and among other things said, "We are facing state regulation of shipments of plants—and even flowers that should not be state regulated. New England and New York State quarantined by Illinois owing to the presence of corn borer when the Department of Agriculture has issued a bulletin proving that it has done little to harm the corn crop, and that the scare is subsiding and its presence has never been recognized in any state excepting Massachusetts and New York. To include not only field grown chrysanthemums but greenhouse grown is ridiculous, and perhaps Gov. Lowden has been ill-advised, and I trust that this radical embargo was not a pull for votes from the Corn belt, regardless of whether the florists liked it or not, because we are few and they many. If it were justified, yes by all means, but not necessary according to the evidence. These matters are local and should be fought by local organizations; and a branch of our organiza-

tion from Illinois would no doubt be listened to by the growers of Illinois.

This organization wants every producer of flowers and flowering plants in America to join hands and work for the betterment of the industry, and to build so well that the industry will continue to live and prosper, and that our product may continue to make the world better to live in, and that the world may have the blossoms they love in season and out of season, and continue to "Say it with Flowers."

The temporary organization was then formed with the following officers: W. C. Stickel, chairman; Andrew Christensen, Secretary; Frank Edgar, Treasurer; George Elliott, A. S. Parker, Thomas Roland, Herman Bartsch and Samuel Goddard, committee on organization and by-laws, and this committee was pledged to attend the Cleveland convention.

After the meeting, 37 of those present signed as members

At a recent meeting of the Southampton, N. Y. Horticultural Society, officers for the ensuing year were elected as follows: S. R. Candler, Supt. R. L. Patterson Estate, president; Geo. H. Campbell, Supt. Goodhue-Livingstone Estate, vice-president; James Dickerson, Supt. A. M. Hoyt Estate, secretary; Fred Marshall, Supt. James L. Breese Estate, treasurer; H. H. Wells, recording secretary. The society's annual flower show will be held on the park grounds at the head of Lake Agawam on July 28 and 29.

Mr. Ernest H. Wilson, assistant director of the Arnold Arboretum, in Boston, lectured before the Orange and Dutchess County Horticultural Societies in New York last week, on "Flowers and Gardens of Japan." The lecture was held at the Colonial Club.

Boston's Flower Show

One of the Most Notable Ever Held in America

The show which opened at Horticultural Hall in Boston Wednesday noon and which will continue through Sunday is the greatest of the kind ever staged in this country. Never before has so large an exhibit of orchids been made in America as that which filled the lecture hall and which come from the estate of Albert C. Burrage at Beverly. More than two hundred genera and fully two thousand varieties are represented in this exhibit. Supplementing the Burrage display is another in the main hall staged by Julius Roehrs of Rutherford, N. J. The Burrage collection is unique not only because of its magnitude but also for the remarkable way in which it has been arranged. A series of tall, round supports have been covered with bark to make them resemble the trunks of trees, and the orchids which naturally grow on trees have been placed with such skill as to rival nature itself. At the top of each tree trunk is a bird cage containing a sweet singing songster.

Many other orchids have been arranged around the sides of the hall, one enormous bank of flowers attracting special attention. There is no opportunity for detailed description. Suffice it to say that among the orchids shown are many of the rarest and most costly varieties in cultivation.

Of course the show is not confined to orchids, by any means. Even without the orchids it would be well worth visiting, but in connection with them

it becomes one to remember as long as the Massachusetts Horticultural Society shall exist. Among the outstanding features is the display of Kurume Azaleas on a platform in the middle of the main hall. Never again, it is safe to say, will it be possible to view in this country so large a collection of these magnificent plants, a hundred and twenty in number, with more than fifty named varieties, which Mr. E. H. Wilson, assistant director of the Arnold Arboretum, brought back from Kurume, Japan, last year. They are being exhibited by the Arnold Arboretum, for which institution they were secured after long negotiations. These azaleas are remarkable for their delicate colors and for their uniformity in size and shape. Professor Sargent's skilful gardener, Mr. Sander, received many congratulations on his success in getting them into flower at exactly the right moment. A careful examination of these azaleas shows that many of them have a petaloid calyx and hose-in-hose flowers. In these flowers the stamens are always five, and like the pistils are always perfect, and there is no malformation as in ordinary double flowers.

Thomas Roland's magnificent acacias have frequently been shown at Horticultural Hall, but never to better advantage. Banked along one side of the main room, they create an effect which elicits exclamations of rapture from all comers—these expressions not being

confined, by any means, to amateurs.

R. & J. Farquhar Co. have their exhibit at one end of the main hall, the place of honor being occupied by a splendid bed of regal lilies. These lilies are in beautiful form, and show conclusively that it is entirely feasible to force the regal lily for the Easter market. There is no reason why these lilies should not be taken up widely by florists as a commercial flower.

The William W. Edgar Co., of Waverly, is showing some of the finest pot roses that have been seen for a long time, the Frau Karl Druschkis being magnificent, both as regards size and quality. The trained Tausendschons are also excellent. And speaking of roses, mention must be made of the glorious cut blooms of Frank W. Dunlop, shown by the originator of this splendid new commercial rose.

Among the private growers, W. N. Craig, of Brookline, has for Faulkner Farm, one of the most pleasing ex-

HORTICULTURE, 78 Devonshire Street, Boston 9, Mass.

The city of Boston is divided into districts, and each district is numbered. If you will observe the number allotted to HORTICULTURE, it will facilitate the delivery of mail to this office.

The members of the trade in England are gradually getting together on the matter of cooperative advertising for the good of the entire horticultural industry. They have carefully followed the advertising campaign of the S. A. F. in this country and have received both inspiration and practical information as a result. Certainly the pioneering of the S. A. F. in this line is bearing fruit beyond what even the originators of the movement expected. In England, though, there seems to be a disposition to unify all of the different horticultural interests, florists, seedsmen and nurserymen cooperating to make a campaign of great proportions. It seems to be realized that anything which leads people in general to make freer use of flowers, growing plants, fertilizers or even garden tools serves a purpose in encouraging horticultural work.

It may be that something of the sort will eventually develop in America. In the past year or two the American Nurserymen's Association has been carrying on a successful campaign although on not nearly so large a scale as the S. A. F. Now the Seedsmen's Association is entering upon a similar campaign. Even if there is no general consolidation of effort, which might not be wise at present, it is easy to see that a certain coordination and cooperation will be advisable, if not actually imperative as the years go on.

Those people who thought that at the close of the war women would cease to display any great interest in garden and farm work have missed their guess. Though the actual necessity for the assistance of women in the fields may have passed (and the question is—has it?), yet women have

showed little disposition to throw down the hoe or the spade and return to the gentler arts. There are many more women in commercial lines than before the war, and if the present scarcity of male help continues, it is not improbable that they will appear in larger numbers in florists' establishments, where the work is not too heavy. In any event, women garden makers have come to constitute a very important group in this country, and the horticultural interests in all branches are beginning to appreciate this fact. If it is desired to work up a sentiment for any special line of endeavor, or to get a quick response in order to meet an emergency, the women's garden clubs are thought of first of all. The Woman's National Garden Association is rapidly coming to be a power in the horticultural world, and branches of this organization are rapidly being formed throughout the country. This very month, on March 22-23, a meeting of the Mid-Western Branch will be held at Chicago, and at that time many matters of interest not only to women garden makers but to every gardener will probably come up for discussion, among them perhaps the actions of the Federal Horticultural Board at Washington, which have not met the approval of the women's associations in all particulars.

According to one of the English papers the idea of co-operative advertising among the horticulturists of Great Britain has been shelved for lack of adequate support. The arguments were that everybody was full of orders and short of stock. Accordingly the majority of those in the trade thought that it was foolish to waste money in advertising when they could sell all the stuff they had. This, however, is a very short-sighted policy, although one which is sometimes favored in some quarters in United States. As a writer in the Horticulture Trade Journal expresses it:

"A co-operative advertising scheme is not capable of yielding immediate results which might be felt throughout the trade. Its object would be to awaken and develop widespread interest in gardening so that instead of there being a falling off a year or two hence, there may be steady and sustained progress. To wait until a slack time sets in and then start advertising is not so sound a policy as it may appear on the surface."

This is an excellent statement of facts. In other lines some concerns make a point of advertising heavily at all times when they are carrying all the business they can swing. They have an eye to the future and know that almost invariably the tide will presently run in the opposite direction. Then the value of their advertising campaign will be seen. Many florists are just beginning to realize that the advertising which brings immediate returns, as can be determined by keyed advertisements, is not the most valuable in the long run. It is the kind of advertising which makes a firm's name so indelibly impressed on the minds of the buyers that they turn to it with their orders as a matter of course.

We are glad that the various horticultural interests in America are going on with their carefully arranged plans for awakening a wider appreciation of plants and flowers on the part of the public. This will inevitably lead to a greater use of plant materials, with a consequent freer buying. The result will be to the advantage of the seedsmen, nurserymen, florists, and even the makers of garden implements. Only one element seems lacking, and that is a co-ordination of the different campaigns which would prevent overlapping or waste. It seems possible and feasible to have some kind of a joint committee representing the different organizations which have started campaigns of publicity.

QUALITY in SERVICE

*Is that
a new
thought?*

It is just as much a part of the Penn system as Quality in Flowers.

GARDENERS' CONFERENCE

Association's Position on Quarantine 37 Misrepresented

A conference of gardeners under the auspices of the National Association of Gardeners was held on March 18 in the Engineering Building, New York City. Robert Weeks of Cleveland, ex-president of the association presided. The conference was called to give the members an opportunity to discuss the aims of the association, and the operations of the Service bureau, and to formulate plans for a campaign to interest young men in the profession of gardening.

W. N. Craig of Brookline, Mass., presented a communication from the Massachusetts Horticultural Society, directing attention to Quarantine Bill No. 37 and its detriment to horticultural progress in the United States, and asked that a delegate be appointed to represent the organization officially at a meeting to be held during the month of May at which various horticultural interests are to be represented. The association voted to be represented at this meeting.

Following the meeting of the association, a statement was issued to the New York papers by an unidentified source, evidently with malicious intent, that the association had gone on record as in favor of the exclusion act, preventing the importation of plants. This, of course, is an untruth, as the National Association of Gardeners from the first has been strongly opposed to Quarantine Bill No. 37, and the discrimination now practised by the Federal Horticultural Board in favoring those who have been friendly to it, while discriminating against those who have had courage to express their views regarding the injustice of this measure, is not weakening the opposition to it of the professional gardeners.

The workings and immediate future

plans of the Service Bureau were explained and generally discussed by the members from the floor, following which a motion was carried heartily endorsing what has been accomplished by this department of the association.

Alexander Michie, chairman of the Service Bureau Publicity Fund, made a strong appeal for greater support on the part of members towards this fund, so that the work may be carried out which has been planned. His appeal met with immediate response among many of those present who came forward after the meeting to subscribe to the fund.

The relation between the employer and the gardener came in for considerable discussion with opinions about equally divided that both were blameworthy for the lack of confidence existing between them.

At an executive meeting of the Trustees and Board of Directors of the association held earlier in the day, at which W. N. Craig of Massachusetts, Robert Weeks of Ohio, George W. Hess of Washington, D. C., John Barnet of Pennsylvania, Robert Williamson of Connecticut; Joseph Tansy, James Stuart, Daniel Coughlin of New York, Arthur Smith and M. C. Ebel of New Jersey, were present; the recommendation of the last convention that the 1920 annual meeting be held in St. Louis was favorably acted upon. The secretary was authorized in conjunction with the committee appointed at the last convention, to develop plans immediately to bring the advantages that the position offers, to the attention of young men who may be interested.

THE LANCASTER COUNTY FLORISTS ASSOCIATION.

Instead of the regular meeting for March, a visiting trip was substituted in its place and the following mem-

bers attended the New York Show: Mr. and Mrs. Rudolph Nagle, Mr. and Mrs. Peter Brown, Mr. and Mrs. J. Du Barre Heinitsh, Mr. and Mrs. Albert M. Herr, Daniel Irwin Herr, Miss Carrie Steckman, Messrs. Elmer Weaver, Walter Denlinger, A. K. Rohrer, H. K. Rohrer, Lemon Lanis, C. S. Leffler, John Shoenberger, and last but not least our friend from Coatsville whom we call plain Jim Brown.

On the way over there was no startling incidents excepting the fact that between Lancaster and Philadelphia our past President, Mr. Elmer Weaver was tapped on the shoulder by a ministerial looking individual who said "are you attending the conference brother?" referring to the Methodist Conference in Philadelphia, when the reply was "no I am going over to the New York Flower Show" conversation lagged as shows and conferences are not twin subjects.

The stay in New York was short, 11.30 to 4.30, but thoroughly enjoyed. Our party were sort of under the wing of T. J. Nolan, and he proved a good chaperon.

Easter lilies are coming along well, according to most reports, but in the East at least there are a great many small plants, far more than the growers like to see at this time. Buds by this time should be turning white if they are to be just right on Easter. If the plants are backward, of course it is merely a question of heat to get them where they belong. You can carry them up to 80 or 90 if you have to, but if you do this, be extremely careful about watering and spraying. Otherwise you may have your work for your pains.

Pansies brought in from the cold frames during the last week should be in flower by Easter and pansies undoubtedly will sell well. If you have them left over you will still be able to dispose of them. The way in which pansy plants are put up makes a great difference in their sale. Some of the shallow baskets which are being offered this season are just right for them.

Baby Ramblers have been grown in great numbers this season, and while it has been difficult to keep them free from mildew owing to the dark weather, many plants in good condition will be sold. The buds should be showing considerable color now. With roses from now on it will be largely a question of protecting them from draughts of cold air or any other sudden change in temperature. Too much moisture is also a danger to be avoided. The successful grower is one who has his plants clean as well as flowered.

On every bright day make a point of syringing the foliage plants, both under and over the leaves. When they are well cleaned up they can be repotted and reset. Try to get out as much of the old soil as you can, and an abundance of fresh, well enriched

GEORGE H. COOKE

Connecticut Ave. and L St.
WASHINGTON, D. C.

earth will give the plants a new lease
of life. Be sure, however, that there
is no lack of good drainage.

It is almost time to get ready to
plant sweet peas outside. To begin
with you should have the soil thor-
oughly well pulverized, but of course
nothing will be done until it is dry
enough so that it will just crumble
when squeezed in the hand. If pos-
sible plant your sweet peas on a new
piece of ground each year. If you have
some land that was manured heavily
last season and plowed in the fall, it
will be just right for the sweet peas
this spring. Perhaps there is a good
deal of clay in your soil. If that is so,
add an abundance of wood ashes, say
30 bushels to the acre. Have your
trench five inches deep and four or
five inches wide. Then plant thinly
and cover with an inch of soil. Early
and rather deep planting is the secret
of having good sweet peas, for then a
strong root action is developed before
the tops make much growth. Make a
point of firming the earth over the
seeds. Considerable is being said in
the English papers just now about the
necessity of firming the earth around
plants and shrubs that are being set
aside, and to some extent the same
advice applies to seeds.

You can start Bougainvilleas read-
ily from half ripened wood that has
two or three joints. Have 75 or 80
degrees of bottom heat and set each
cutting very firmly. Some shading and
a light sprinkling will be needed. By
the time half an inch of root growth
has been produced, pot up in a rich
compost, preferably three parts of
loam, one part of manure and a little
sand. As Bougainvilleas grow rapidly
they will need to be shifted quite fre-
quently until they are in six or seven-
inch pots. Keeping them close to the
glass will make them stocky and short
jointed.

It is time to set the seedling tuber-
ous begonias into small pots. Fibrous
loam and leaf mold in equal parts, with
the addition of a little sand, make a
good soil. They like to be near the
glass and have a temperature of 60
degrees. Shift on until they reach
five-inch pots.

FALL SHOW PLANNED.

Executive Committee of the American Dahlia Society Meets.

At the meeting of the Executive Committee of the American Dahlia Society, held at the International Flower Show in the Grand Central Palace, New York, March 19, it was decided to hold the autumn show in New York during September at one of the centrally located hotels and to charge exhibitors a reasonable price for floor space and to also charge for admission to defray the expenses.

The plan is to give the greatest Dahlia show ever held and work to that end has already been started and will be prosecuted vigorously and continuously until show time. Every dahlia grower and lover of this popular flower is invited to co-operate.

President Vincent moved that Prof. George Fraser of the Connecticut State Agricultural College, Storrs, Conn., be tendered the thanks of the Society for the excellent manner in which the trial grounds were conducted last year, which was carried, and Prof. Fraser was made a life member of the Society.

The trial grounds will be continued and will be larger and better than ever. Tubers for the trial gardens should be properly labeled with the name of the variety and exhibitor and sent to Prof. George Fraser.

James Duthie, Oyster Bay, N. Y., moved that a new scale of points be made so that good exhibition varieties and varieties good for cut flowers, be given an equal chance. The motion was carried.

A motion was passed protesting the quarantine of the states of Illinois and Michigan against dahlia tubers and bulbs.

EDWARD C. VICK, Secretary.

PENNSYLVANIA HORTICULTURAL SOCIETY.

A very large audience was present at the lecture of this Society on Tuesday last. The subject of the lecture being, "Perennials and Bulbous Plants," given by E. I. Wilde, Assistant Professor of Floriculture at the Pennsylvania State College. The lecturer greeted his audience as follows:

"You are gathered here this afternoon to be entertained, not by the speaker but by the flower friends which will be thrown upon the screen. Perhaps you have not thought of it in this light but whenever I attend such a lecture as this, I always have a feeling of renewing such friendships and a sight of my old favorites in their natural setting, only intensifies my de-

sire to be once more with them in my own garden."

The lecturer then took his audience through the out door garden, from April to November, starting in with the early flowering Bulbs, giving all the material used in the perennial border, in the order of the flowering season.

The exhibits of plants and flowers at this lecture was the best we had this winter season. Philadelphia has always been noted for those specimen plants of Cinerarias, both the Hybrid and Stellata varieties, and the specimens shown at this meeting maintained this reputation.

A special feature of the exhibition, was a plant of Schizanthus, exhibited by Mr. S. T. Bodine, Villa Nova, Pa., Alex. MacLeod, gardener. This plant to which the first prize was awarded, was covered with flowers of a rich copper bronze color. It was very attractive standing out clear among all the other exhibits.

The next lecture of this Society will be on April 13, when Professor A. C. Beal, Secretary of the American Gladiolus Society, will give an Illustrated Lecture on Gladioli.

DAVID RUST, Secretary.

MR. CRAIG SPEAKS IN NEW YORK

On March 17 W. N. Craig appeared before the Garden Club of America at its annual meeting at the Colony Club of New York, and addressed a large audience composed of its members on the "Professional Gardener from His View Point." Mr. Craig ably presented the cause of the professional gardener, and judging by the hearty reception his remarks received, his views met with the endorsement of those who listened to him. Mr. Craig also spoke of the iniquities of Quarantine Bill No. 37 which met with general approval, the Garden Club of America passing a resolution unanimously as opposed to the measure.

LADIES' SOCIETY OF AMERICAN FLORISTS

In response to the call issued by the President, a meeting of the Board of Directors was held in New York on Thursday, March 18, at which time Mrs. Charles Totty was elected Chairman for 1920.

The matter of fixing the amount of the Bond for the Secretary and Treasurer, in accordance with the action of the Society at the meeting held in Detroit, was left to the Board of Directors. They have so fixed the same that the Secretary's Bond shall be for \$500 and that of the Treasurer for \$1,000. MRS. ALBERT M. HERR, Secy.

George Watson's Corner

"You in your small corner and me in mine."

Alfred M. Campbell who is pictured with a company of his good workers in the accompanying illustration has built up a fine reputation in the trade. He entered the commission cut flower business at Pennock's where he remained one year. After that he had a year at Niessen's, and three years at Reid's and in 1906 commenced for himself at 1510 Sansom street where he still remains.

His first experience in the growing end was in his boyhood at Robert Craigs and four years later in 1908 he took over the La Roche greenhouses at Collingdale.

He lived with his family in Philadelphia until 1916 when he moved out to Strafford, where he had made another new expansion in the growing end.

At Strafford he bought out the interest of Edward A. Stroud who had established a modern range of glass for local and shipping trade and was widely known. Mr. Campbell has made this place even more noted by the fine crops of carnations, lilies, cyclamen, hydrangeas and other market specialties which he has been growing.

His next expansion came when in 1919 he acquired the Samtman place at Hatboro, also a modern range which he devotes mostly to rose growing, and manages very successfully.

The Collingdale place has grown old

and weather worn and finally was used mostly for ferns, asparagus and other greens; and during the war glass and other materials being in demand, it was cleared up entirely, and a good price realized on the transaction.

Altogether Mr. Campbell is a very busy man and keeps a large force of men on the jump the year round. Personally he is very active and aggressive; enthusiastic in his work; plans things for tomorrow and the next day and the day after in his sleep and I fear very much seldom goes to church, as a good Presbyterian ought to but perhaps we must excuse him a bit on that as he has so many works of necessity to do on the Lord's day. He is never too busy, however, to give a cheerful smile, indulge in a friendly chat, and swap opinions with callers from far and near. Callers are many as he has a wide acquaintance, being a frequent exhibitor at many shows in metropolitan centers all over the country and a frequent prize winner when he enters into competition. If there be anything new around—he wants to know about it, and that is one of the attributes of our wide-awake business men who want to keep in the front of the procession.

One of the reasons I have taken the trouble to write these few lines is because I get a chance to say something without interruption, whereas usually "Al" insists on doing all the talking. Here is where I get even with him for once.

An interesting social function will take place at the Calvary Presbyterian Church, Germantown, April 15th, when Elsie Luck Runcie will be joined in

matrimony to Charles Foster Pennock, of Lansdowne, Pa. The bride is a daughter of Mr. and Mrs. T. Henry Runcie of Germantown.

MR. COWEE'S BILL.

A vigorous effort is being made to secure a horticultural building for the fair ground at Syracuse. Assemblyman Arthur Cowee, of Albany, N. Y., the well known gladiolus grower, has presented a bill which is receiving the hearty support of horticultural interests throughout the state. This bill is as follows:

Section 1. The state fair commission is hereby authorized and empowered to execute all necessary contracts in behalf of the people of the state of New York for the erection, construction and equipment of a horticultural building for the exhibitions of fruits, flowers, vegetables, seeds, bee and honey products, farm produce and nursery stock, said building to be erected on the state fair grounds at Syracuse, New York, at a cost not to exceed five hundred thousand dollars.

Sec. 2. The necessary expense incurred for the purpose of securing information as to methods of exhibiting these products and such soil survey, borings and test pits and the compensation of experts in connection with the drafting of plans and specifications shall be included as part of the cost of the building and be paid from the appropriation therefor.

Sec. 3. The sum of five hundred thousand dollars (\$500,000), or so much thereof as may be necessary, is hereby appropriated out of any moneys in the state treasury, not otherwise appropriated, for the erection, construction and equipment of such building and all other expenses incurred under the provisions of this act.

FERTILIZERS FOR WINDOW PLANTS.

Every window gardener wants a cheap fertilizer for plants that is not objectionable to handle. The Bureau of Plant Industry, Pennsylvania Department of Agriculture, suggests the following mixture, known as Wagner's Solution, the ingredients for which are easily obtainable at any drug store:

Ammonium phosphate, 2 ozs.; sodium nitrate, 1¼ ozs.; potassium nitrate, 1¼ ozs.; ammonium sulphate, 1½ ozs.

Dissolve these salts in five pints of water and keep this as a stock solution. For use on the soil in which the plants are growing dilute four ounces of this solution in three gallons of water, or if only a small amount is to be used, dilute at the rate of one ounce to a gallon of water. Apply to the soil frequently.

The Campbells are Here

HAS THE FLORIST BUSINESS COME BACK?

Canadian florists have been discussing the question, "Has the Florist Business Come Back?" through the columns of their trade paper. A. S. Jennings & Co., of Toronto, considers the matter as follows:

The question as to whether or not the florist business has come back since the war does not require a lengthy answer. I would like to meet the legitimate florist who would want to return to pre-war conditions with its 25 cents a dozen daffodils, or 75-cent carnations and 75-cent roses, and the accompanying newspaper advertisements of thousands of cut flowers at slaughter prices. Those were the days when the average florist and grower were working for somebody else and paying for the privilege as well. There may or may not be the same quantity of flowers handled today as then, but I cannot see how any florist could possibly be in doubt as to which condition he would rather face.

I hear of some who are complaining about the high prices that the poorer classes are unable to purchase flowers to-day. What of it, if they can't? There are many necessities of life that are beyond their reach because of prohibitive prices, and I don't think this class is worrying very much about flowers at any price. There's no stock being thrown out for lack of buyers.

It seems to me that since 1914, a good many growers and retailers have profited by the constantly increasing cost of everything they handle in this way. The high price of coal, building materials, labor, etc., has compelled them to take greater care of cost than ever before, with the result that nowadays some figuring is usually done before prices are fixed. The old way was to take a guess and trust to luck. To that condition I don't think any florist wants to return.

My own opinion is that the florist business has come back, and come back to a healthier and more profitable standard than the most of us ever dreamed of. There's a chance nowadays to get a little laid aside for the proverbial rainy day.

Frank P. Sawyer, florist of Clinton, Mass., has moved from the Pierce block to the Cannon block. The new store has been completely renovated and presents a most attractive appearance.

At a meeting of the Hartford Florists' Club on March 18th, George T. Ryan, a florist of Waterbury, Ct., made the statement that the wage earners were buying the bulk of the flowers these days. Mr. Ryan is planning to form a florists' club in Waterbury, Ct.

DAYLIGHT SAVING.

To the Editor of HORTICULTURE.

Dear Sir:—In reply to Mr. Craig's letter on daylight saving, I may be considered one of those who show effrontery and ignorance truly pitiful, nevertheless I am from Missouri.

Undoubtedly Mr. Craig is no different from many others who want things different from what they are just for the sake of being different.

He does not enter into any detail what advantages we as tillers of the soil have derived from it.

What we have seen of it has not impressed me as being of any advantage to this line of industry, and the result of it has been the placing of more handicaps in the management of our business.

I do not see that daylight saving harms a crop at all, or has anything to do with plant life.

The question is, can we as agriculturists manage our business better or as well by commencing work at 6 a. m. instead of 7 a. m. and ceasing work at 4 p. m. instead of 5.

I am convinced that the working hours 7 to 5 suit our needs better than from 6 to 4.

I could state many disadvantages which daylight saving has placed upon the grower and will state them when I hear the advantages. Many people advance the daylight saving scheme through selfish motives, namely, that it is pleasanter and more congenial to work in their gardens an hour in the evening rather than an hour earlier in the morning.

In other words the conditions are better because the plant and ground is dry and the air cool.

With the grower he is obliged to start early whether conditions are right or not and he gets no benefit from the cool of the afternoon being obliged to cease work at 4 p. m.

I am your very truly,

WILLIAM SIM.

The Jackson and Perkins Nursery Company, of Newark, N. Y., has negotiated a five-year lease on the farm of E. F. VanHoesen, and will use the property in the development of their nursery business and the growing of roses, in which they will specialize heavily this season. In the farm proper there are more than 100 acres and it is planned to propagate more than 1,000,000 roses on the place this season.

HENRY A. DREER, Seeds, Plants, Bulbs and Supplies, 714-716 Chestnut St., Philadelphia, Pa.

(Continued from page 251)

hibits, showing a miscellaneous lot of finely grown greenhouse plants. Some of the finest Schizanthus specimens ever seen in the hall are being shown by Edwin S. Webster and Mrs. C. G. Weld.

Several of the retail florists have attractive tables. As usual that of Henry Penn is characterized by extreme good taste. Houghton & Gorney feature a lovely bride's bouquet made up of white Camellias, Freesias and Swainsonas. The table of John Eiseman, the Beacon Florist, aroused particular interest because of the novel character of the exhibit. A leading feature consists of large gold frames in the center of which appeared artistically designed flower groups. The flower stems rest in water, although of course the receptacles are hidden. This plan offers opportunity for unusual effects in flower decoration. Tiny flower sprays gummed to small pictures form another interesting novelty.

All in all, the big show is characterized by a very high quality of exhibits in every class, making it notable in more than one way.

Two gold medals were awarded the Burrage exhibit and two gold medals to the Arnold Arboretum for azaleas from Japan. A gold medal was also awarded to Julius Roehrs' exhibit of orchids. A silver medal was given Henry Penn and Houghton-Gorney and a bronze medal to the Beacon Florist and Henry Comley.

AMERICAN ROSE SOCIETY.

A directors' meeting of this society was held at the City Club, New York City, previous to the regular meeting at the Grand Central Palace where routine business was taken care of. At the annual meeting of the society, officers were elected as follows: President, Robert Pyle; vice-president, Fred Atkins; secretary, Prof. E. A. White; treasurer, Harry O. May. Messrs. Curry of Portland, Ore., Pen-nock of Philadelphia and Roland of Nahant, Mass., were elected to the Executive Committee, and John Cook and Dr. Van Fleet were unanimously elected honorary members.

It Was a Great Success in Every Way.

The International Flower Show held in New York last week came to a close Sunday, and everyone connected in any way with the making of that show can rightly be excused for their enthusiasm. It was a glorious success, all records were broken as to attendance and financial results, the quality of the stock was wonderful, competition was keen, and while we all know that there were some lines missing such as azaleas, which were probably the most important, other entries served to fill the hall with probably as fine a quality lot of stock as was ever shown in New York.

Besides those particular entries which we mentioned in last week's issue, it is proper to draw attention to the high lights which almost everybody will agree were the rose displays; particularly those staged on Friday, when Duckham-Pierson Co., F. R. Pierson Co. and A. N. Pierson, Inc., put up three wonderful groups and won in the order named.

The fern display put up by F. R. Pierson Co. was very fine. Not only was the arrangement particularly strong, but the quality of the stock in that group was of the finest.

The display of sweet peas on the balcony by the W. Atlee Burpee Company is also well worthy of mention.

The storemen as well as the plant growers were intensely interested in A. L. Miller's lilies, and many guesses were made as to the origin of that stock. A great many of the plant growers would like to know where the bulbs came from and what they really were. The foliage is decidedly different from any of the so-called Easter lilies. It is evidently neither a giganteum nor a formosum, but at any rate it is a mighty good lily whatever it is. We understand it is earlier than the giganteum, and the specimens shown bear out Mr. Miller's statement that they throw a larger percentage of blooms.

What a pity it is that more of the big cities cannot get an organization working that would assure them an annual flower show as is being done in New York. Of course in that city they now have it down to a fine art, and the show is assured of success every year. The management carries it right along in a smooth working way, and they are certainly to be congratulated upon their success.

The Market.

The downward tendency of the market has been thoroughly checked. From all centers the report comes that the prices are firm or somewhat on the up grade. In Boston there has been a slight advance along some lines.

The average on carnations is about 6c., although Laddie still holds at 20c. These prices fit most all the other cities. Roses are running about the same as last week, anywhere from 5c. to 20c. with very fine stock up to 50c. Callas are selling a trifle better, \$3 being a good fair price, although they are quoted rather lower in Boston for the most part. Sweet peas sell readily from 50c. to \$2.00 in Boston; in New York, \$3.00 is obtained without much trouble. Pittsburgh seems to be slower than the other markets in sweet peas. Snapdragon is running from \$3.00 to \$25.00 in most markets and tulips from \$2.00 to \$3.00, although in New York the best stock has been selling for \$6.00. Buffalo, too, is reporting an excellent demand for tulips. Violets have advanced but very little. In New York there is a decided increase in lilies, which is natural. Jonquils are more popular there than tulips and sell very well.

The Recognized Standard Insecticide.
A spray remedy for green, black, white fly, thrips and soft scale.

FUNGINE

For mildew, rust and other blights affecting flowers, fruits and vegetables.

VERMINE

For eel worms, angle worms and other worms working in the soil.

The Harvey's Build Hitchings Houses

ONE crisp September morning, some five or so years ago, I was met at Brandywine Summit, Pa., by one of "The Harvey Boys" and taken to the Old Harvey place for as delightful a day's outing as I ever hope to have.

Meeting the elder Mr. Harvey was not the least of the day's pleasure. Recall how we stood in front of the old house and looking across the field, Mr. Harvey said: "Here was where the old Revolutionary battle of the Brandywine was fought. At that spot right over there was where the fiercest fighting was done."

"Some summer evenings, when the day's work is over, I come out here and look across this field and kind of let my imagination have its own way in seeing that battle all over again. And then I think of Washington, who against such tremendous odds broke the chains of the country's en-

slavement, giving to us all a liberty like which the world had never known."

"Somehow, thinking of Washington like that, always renews my vows of sincerity towards life. It makes me renew my determination that in doing whatever we do, we will build strong—build our greenhouses and our characters equally strong."

Having read these inspiring words of Mr. Harvey, you know why that day stands out so particularly strong in my mind.

You can also understand why I was more than usually pleased when one of our salesmen phoned that "The Harvey" had just ordered two Hitchings Houses—two Half-Iron Frame Houses, one 243 ft. by 33 ft. 6 in.; the other 252 ft. by 33 ft. 6 in.

We know you, who know the Harveys, can but congratulate us on numbering them among our customers.

FERNS

THE VICTORY FERN (*Nephrolepis victoria*)

We take pleasure in offering this new and valuable variety of *Nephrolepis*. It is a beautifully crested form of "Teddy, Jr." with fronds frequently subdivided on the ends, making a most unique, distinct, and desirable variety.

This fern was

AWARDED A BRONZE MEDAL

at the S. A. F. Convention at Detroit in August, 1919. The judges of the award reported as follows: "Special stress is laid on the new fern Victory, with a rapid growth and a branching at end of fronds, making it a shapely plant. It should be a commercial success, and we RECOMMEND IT MOST HIGHLY."

Strong plants, 2½-inch pots.... \$3.00 per dozen, \$20.00 per 100
Strong plants, 3½-inch pots.... 7.50 per dozen, 50.00 per 100
Extra fine specimens: 8-inch, \$3.00; 10-inch, \$5.00; 12-inch, \$7.50

NATIONAL PUBLICITY CAMPAIGN.

It is cheering indeed to receive a letter such as the following:

"Ann Arbor, Mich., March 24, 1920.

Mr. John Young, 1170 Broadway, New York. My dear Mr. Young: At our convention held in Lansing last week a donation to the National Publicity Campaign was suggested. As this is the first year of our organization our treasury would hardly stand a suitable donation to this worthy cause. Nevertheless, we were able to raise a hundred and twenty seven (\$127.00) dollars by popular subscription which I herewith enclose. Please credit this to the Michigan State Florists' Association, and I trust in the years to come this association will be able to support this campaign to a far greater degree. Respectfully yours. W. S. Wells, Treasurer, Michigan State Florists' Association."

At the recent meeting of the Publicity Committee in New York a number of specimen page advertisements in colors appearing during the past few weeks in the magazines were offered for inspection. These advertisements were inserted by different manufacturers, and flowers were in every case featured in connection with the specialties advertised, the latter rather inconspicuously obtruded, dependence on the flowers for attraction to the advertisements being most obvious. A well-known hat manufacturer, whose issue of handsome poster cards drawing attention to a particular make of hats has long been a feature of his advertising, this spring is using a poster showing no pictorial design other than a splendid basket of spring flowers. This is truly saying it with flowers.

Plans for our magazine advertising in the immediate future are now settled, meeting the appropriation made by our committee for the purpose. Mother's Day is to be featured in the big weeklies, in well designed advertisements each occupying two columns; and several two column advertisements will appear in the June monthlies, with page advertisements in two leading magazines in May. A two column advertisement will also appear in a leading Canadian magazine. During the dull summer months a smaller double column advertisement will appear in a selected list of weeklies and monthlies, giving, practically,

McHITCHISON & CO. 95 Chambers St.
NEW YORK

continuous publicity for our slogan throughout these months.

Our committee was unable to take advantage of one or two of the biggest magazines, for the reason, often stated in this column, that contracts are required to be made so far ahead that the committee could not conscientiously incur the necessary liability without having sufficient funds in sight.

If a greater and more reasonable support in the way of contributions to the Campaign Fund were forthcoming, much more could be accomplished. The fund so far available has worked wonders, not only through the publicity we have been able to buy, but through the extra publicity which it has incited, in ways entirely unconceived. Our investment—we must surely call it this, since we are getting full and satisfactory returns for our expenditures—can hardly now be figured in dollars and cents when we consider it in the light of an asset. Many industrial captains have spent ten times the amount of money for publicity that the florists have spent, yet look upon our publicity with envious eyes, surprised at the tremendous results we have obtained for so little.

Still, we are only at the edge of the ocean of possibility open to us. We want more money, much more, to secure our full measure of benefit. We are like the small hungry boy looking into the pastry shop window, without a penny to satisfy his burning desire to taste of the good things he sees. If those florists who have not subscribed to the fund would only realize what there is before us, they would gladly dip down into their pockets and produce the necessary funds to enable us to make our slogan one daily, hourly almost, in the public mind. Just think of it—there are more than one hundred million birthdays observed in this country each year. There are, perhaps, one-fifth as many wedding anniversaries; and just as many other occasions when a timely suggestion "Say it with Flowers" would add to the volume of the florist business. This is what we aim to accomplish—but we cannot do it without the necessary support. Do you, Mr. Nonsubscriber, realize this? Cannot you be convinced?

Your pledge will be quite acceptable, if an immediate cash subscription is inconvenient. JOHN YOUNG, Secy.

1170 Broadway, New York City.

W. H. Elliott, of Brighton, Mass., is on his way to California where he will join Mrs. Elliott. He will visit many establishments on his way to the Pacific coast.

BIG DAHLIA EXHIBIT PLANNED.

The American Dahlia Society has engaged the entire conservatory and roof garden of the Hotel Pennsylvania, opposite the Pennsylvania Station, 32nd-33rd streets and Eighth avenue, New York, for September 27, 28, and 29, for the Annual Exhibition of the Society. The exhibition will open on the evening of September 27 and close on the evening of the 29th.

The roof garden is used during the

summer as a restaurant. It has good daylight on all four sides and the entrance is through the conservatory on the roof. The space is very large, something like 12,000 square feet in a long hall giving wonderful decorative opportunities.

A determined effort will be made to make this the largest exhibition ever given of any single flower. Plans will be rapidly perfected and developments will be stated later. EDWARD C. VICK, Sec.

GENERAL NEWS NOTES.

Seventy-one merchants re-opened the old Siegel-Cooper store on March 22. Each will operate individually, but with delivery and other service facilities in common. Peter Kutrumanes has the flower shop, and Grossberg, Tyler, Finnerman Co. has the arti-
ficial flowers, decorations, baskets, vases, etc. Each is on the main floor.

THE TALK OF THE TRADE

Of course I was not very much surprised to get a comeback from Mr. W. N. Craig in answer to my article on Daylight Saving, and I am not satisfied to let his letter go without my reply.

To begin with, I made a mistake in using the word "florist"; what I intended to say was "grower," and when I say that the growers are not generally favorable towards Daylight Saving I still think that I am not very far away from the truth. First of all, I will admit freely enough Mr. Craig's right to his opinion, but he mustn't get disgruntled if he can't make everybody think the same way.

As to the meetings of florists' organizations, I think I have attended practically all of them. When the Gardeners' & Florists' Club of Boston voted to favor it, that club surprised no one in taking that stand, for first a good strong talk was given entirely favoring it, and secondly it was not voted by commercial growers, as the commercial grower is not the majority at those club meetings. That also applies to the meeting of the Florists' Association of Boston, as the growers are also in the minority, as we all know the membership shows a large number of salesmen in the market, wholesalers and retailers, and more than that I know several growers who attended that meeting who opposed daylight saving but knew it was useless to vote against it as they would be outvoted; consequently did not voice themselves in any way.

I want to say also that I don't blame any of the florists for favoring it. I like it myself; I like the plan, but a florist who is a grower employing help and growing outdoor crops has his business affected and that is why I said that many of them do not approve of it. The answer that the possibility of earlier cutting of flowers in the morning offsets the rose grower's objection to cutting so early in the afternoon is not tenable. I believe that it is a recognized fact that late in the afternoon flowers open very rapidly. Many a rose grower knows that some varieties of roses really demand cutting very late in the day, and that they stand practically still until the sun be-

gins to show its rays the next morning.

Certainly if we must have D. S. it would be much better if we had a National law for daylight saving; that is about the only point where I can agree with Mr. Craig, but until we have that there are going to be a great many complications which will be annoying. However, I come back to the point which I had previously in mind: The grower whose business is affected, and that, of course, means his pocket-book, cannot be expected to favor daylight saving, and that grower is the one who operates glass and who also has outdoor crops.

As an illustration of the inconveniences if Daylight Saving is to be localized instead of becoming a National law, I quote from a newspaper clipping: Outside of Massachusetts chaotic conditions reached a climax in Hartford, where both time schedules are in operation with little apparent success. Hartford courts were run yesterday on standard time, while the daylight saving plan was followed in the offices of the United States marshal and by the United States district attorney and deputy clerk of courts. On the other hand, the customs and department of justice offices were adhering to standard time. Deliveries of mails, however, were made on the daylight saving schedule, despite the fact that railroads were running on standard time. Other Connecticut cities and towns experienced the same difficulties, which were by no means lessened when thousands of citizens set their clocks an hour ahead, while thousands of others decided that they would rise by the old schedule.

These difficulties as noted above are in addition to the troubles which the grower finds it necessary to face. Again I say let it be National or not at all.

It is interesting to learn that orchids are being grown in largely increased quantities across the border. Mr. W. G. Peacock, of the Dale Estate, Toronto, recently told me that he is having a large business in orchids this

season. The firm started with only fifty plants, he said, but the stock has now been increased to sixty-four thousand. "In fact," said Mr. Peacock, "we consider that we now have the finest commercial collection of orchids on the North American continent."

As a matter of fact, orchids have been grown commercially in Canada only about fifteen years, and during that time the bulk of the flowers have been shipped to the United States. It is only recently that Canadian florists have been able to educate the Canadian taste for this flower. Now the call is growing and it is fair to expect that the Canadian demand will soon largely absorb their total output.

Continuing the talk on Chrysanthemums, I come to a list of Pompons, but this is not easy. There is certainly one wonderfully fine lot of Chrysanthemums grown; the varieties cover all shades, types and seasons. I shall try to mention some which to me appear to be of the best. Other growers may have their favorites which with them are most satisfactory, but in a general way these which I will mention are good marketable varieties in their seasons.

For early white, we have both Maid of Kent which is an excellent button type and Wanda, which is a pure white of the larger flowered type. Both come in between October 15 and 30 according to the season. White Lillian Doty is without question as fine a white pompon as there is on the market. It is an all around satisfactory and profitable variety. This also comes in the latter part of October. Following this we might mention Marianna, which is a large flowered pompon and an excellent grower. Its flowering season is from November 1st on to the middle of the month. Baby Margaret is a sport of the yellow button type Baby and comes in about the middle of November, and for a Thanksgiving white I find that a lot of growers favor the old standby Diana. It has good size, is a wonderful producer and will turn in dollars and cents if any pompon can do it.

In pink, a lot of growers think first of all of Niza. It is pale pink in color, is as early as any good pompon and shows good returns each year. It matures between Oct. 1 and 15. Nesco is

a deeper pink, in fact it is really an old rose color, is a fine grower and producer and will follow close after Niza. Then we come again to the Doty family. Lillian Doty is known by all and it is only necessary to say that there is none better. Fairy Queen is a clear lively pink, good size flower and a good grower, producing long stems with plenty of flowers. Don't leave it out. Its flowering season is the latter part of October. Delphine Dodge is also another very satisfactory sort. It is one of the newer ones but good in every way. For November 1st, there is a good light pink button type well worth growing called Donald. Acto, a deep pink large flowered type of pompon is very fine for the middle of November and can sometimes be held for Thanksgiving. It also has long stems and is a good producer. For Thanksgiving, I don't think anything will beat Western Beauty. It is a rose pink shade, produces very long stems and is a free and fast grower.

In yellow, there are a number of mighty good varieties. Take for instance Zora and Skibo for the earlier sorts, blooming close to October 15. Both are good color and profitable sorts. Golden Climax is one of the most popular varieties, free, easy to grow and comes in the early part of November. Golden West also comes about this time, but this is a large button type and makes a good running mate to Golden Climax. Harvest Moon I forgot to mention as a middle of October variety. It is a generally satisfactory variety of the button type and very prolific. Quinola for Thanksgiving and Romaine Warren also for Thanksgiving are both varieties to pin your faith to. Quinola is a clear golden yellow color, while Romaine Warren is deep yellow shading into bronze. Both are good growers and good producers. We mustn't forget the little yellow button which is used so much for corsage work and other purposes where small flowers are needed, Baby, which is largely grown and always has good demand.

In red and bronze for early, Adironda is hard to beat. It is a bronze button and good in every way. Doris is also a bronze button type and has very attractive coloring, also reddish bronze. Mrs. Beu or Frank Wilcox, whichever way you wish to call it, is a popular standby for Thanksgiving trade both for sprays or cut flower purposes. Anyone can grow it and if any pompon will turn in profit, this one is capable of doing it also. Hilda Canning, another Thanksgiving variety, is well liked, but sometimes we cannot hold it for Thanksgiving; it all depends upon the season. The

reddish bronze button flowers of Hilda Canning are very attractive in their coloring and this variety is well worth keeping on your list. For red, I don't know of any that I think more of than Jules Lagraverre. It is deep red in color, of good size, good finish and a good producer.

Before I leave the subject of pompons I want to speak of a few varieties that do exceptionally well when grown for disbudded flowers. For a number of years past, the New York market in particular has been offering these flowers and they have found a ready sale. Take the varieties Acto, Fairy Queen, the Dotys and Frank Wilcox as examples. They do well when grown disbudded. Start your plants early, pinch them and grow them two to three flowers to the plant and disbud them the same as you would any large flowered type. It will turn out a crop that is always in demand and if I am not greatly mistaken will pay you as well if not better than a lot of the large flowered types.

The Edward R. Rhodes Post, American Legion, Tacoma, Wash., has sent a resolution to Franklin D'Olier National Commander, favoring the adoption of the Shirley poppy as the memorial flower of the legion, and suggests that every member of the American Legion on Memorial Day, 1920 and every year thereafter, wear a red poppy. The formal adoption as proposed would require the action of the American Legion in convention.

ORCHIDS IN AMERICA.

Mr. Manda's Interesting Paper Has Many Personal Allusions.

During the Flower Show in Boston last week a number of important papers were read about orchids and orchid growing. One of the most interesting papers was that of W. A. Manda, because it dealt largely with the names of the men and women who have become famous in orchid history in this country. In part Mr. Manda's paper was as follows:

While dwelling on the history and development of the culture of the first orchids in America we should not forget that long before the discovery and conquest of this continent the progressive rulers of Mexico appreciated orchids to a great extent. Early historians relate that choice flowers and especially orchids were the daily tributes to the rulers of Mexico. Some of the names were even mentioned, such as the fragrant "Stanhopea Tigrina." It is also stated by the same historians that no one was allowed in the presence of Montezuma or other high personages without profuse gifts of choice flowers which were used profusely for every public or religious ceremony.

In this country orchid culture began in the early eighties. We find a record that some orchids were grown in the

B. HAMMOND TRACY, Inc., Wenham, Mass.

Harvard Botanical Gardens but it was not until after the Civil War that orchids began to be appreciated and grown in large quantities like other plants.

Among pioneers in this country we can note such names as Louis Menand of Albany, N. Y., a grand old Frenchman that loved his orchids as much as his cacti; George Such, Perth Amboy, N. Y.; Henry A. Siebrecht, New Rochelle, N. Y.; Mr. Bush, Tremont, N. Y., and Mr. Mathews of Utica. The above were growing orchids commercially, while among the private growers we find in the early days such names as Erastus Corning of Albany, N. Y., who had at one time the largest and finest collection of orchids in cultivation, especially rich in Phalaenopsis including the Unique Phalaenopsis Harriettae, besides a fine collection of Odontoglossum which were grown quite successfully.

Mr. F. L. Ames of North Easton Mass. had an unsurpassed collection of orchids, growing Odontoglossums and Masdevallias to perfection. This collection contained a good many rare and unique specimens which were always seen at the flower shows of the Massachusetts Horticultural Society. Mr. H. H. Hunnewell of Wellesley, Mass. had a good representative collection of orchids among his remarkable plants. Mr. D. S. Brown of St. Louis, Mo., had a collection which has been donated to the Missouri Botanical Gardens of St. Louis.

Other amateurs in the early days were, Mrs. Jack Gardner, of Brookline, Mr. Robert C. Pratt of Watertown, Mr. Payson of Watertown, and Mr. Gilmore of North Easton. The growers of these establishments, Wm. Robinson, F. L. Harris, David Allan, Robert Bottomley and Thomas Greaves, were keen competitors at all the shows of the Massachusetts Horticultural Society, although the prizes then offered were not larger than those offered for a head of lettuce or an apple. Many of the specimens then shown have never been excelled.

Other amateurs of the early days days were Mr. De Witt Smith of Lee, Mass., who gathered a wonderful collection of Cypripediums, Miss Morgan of New York City, Mr. Smith of Troy, N. Y., who has grown some wonderful Cymbidiums and Ceelogyne out of doors during summer, Dr. Brigham of San Francisco, Cal. and Mr. Dinsmore of Staatsburgh, N. Y.

Miss Baldwin of Philadelphia, Pa., grew for a number of years a choice collection of Orchids in her greenhouses and displayed same in a special conservatory facing Chestnut street, where thousands of passersby enjoyed their beauty. Mrs. Geo. Wilson of

Philadelphia, Pa., had a fine collection of Cypripediums, while the late Mr. Roebling of Trenton, N. J., had a very representative collection which included many choice varieties and hybrids.

Mr. Henry Graves of Orange, N. J., had a large collection of Cypripediums and other Orchids. Other New Jersey collections were those of Mr. J. W. James and Mr. H. McKay Twombly both of Madison, N. J.

Coming to the years of 1880 to 1890 Orchids had quite an impetus. Mr. De Forest of Summit, N. J., had imported large quantities of Orchids for cut flower purposes and was really the pioneer in growing Orchids for cut flower purposes. Shortly after Pitcher & Manda of Short Hills, N. J., had assembled the largest collection of Orchids in the world, with a unique collection of Cypripediums and all the leading varieties of Orchids by the thousands, while every Botanical Orchid procurable was represented by some specimens.

Commercially the largest quantity of Orchids numbering over one hundred thousand plants are grown now by Thomas Young, Bound Brook, N. J., who grows them especially for cut flower purposes. In this establishment a large number of seedlings are being raised both of natural species as well as hybrids. However, they are mostly of Cattleyas and allied Generas such as Laelia, Brassavola and such class of plants.

Lager & Hurrell of Summit, N. J., Geo. Baldwin of Mamaroneck, N. Y., L. Carrillo of Mamaroneck, N. Y., are Orchid specialists and do not grow other plants. Other firms growing a quantity of Orchids either for sale as plants or cut flowers are J. T. Butterworth of So. Framingham, Mass., Frank Dolansky of Lynn, Mass., Thomas Roland of Nahant, Mass., Joseph Manda Co. of West Orange, N. J., Thomas Jones of Short Hills, N. J., Herman Komische of Secaucus, N. J., Fred Burki of Pittsburgh, Pa., Jos. Heacock of Philadelphia, Pa., Alphonse Pericat of Collingwood, Pa., Poehlmann Bros. of Chicago, Ill., Ferrari Bros. and Carbone of San Francisco, Cal. The Dale Estate, Brampton, Ont., is the main Orchid grower in Canada.

Beside these establishments there are thousands of commercial growers that grow anywhere from 100 to 1000 Orchids in their establishments.

Orchid hybridization began about 1885 and the first hybrid Orchid of American Origin, Cypripedium Arnoldianum (Cypripedium Concolor and Cypripedium Superbiens) was exhibited by Pitcher & Manda before this Society in 1890 followed by other hybrids.

LAGER & HURRELL, Summit, N. J.

STRAWBERRY AND RASPBERRY PLANTS

I have been selling plants since 1870. There has been put out to the market in that time 2600 named varieties, you can count your fingers and you will have all the best ones. You will not throw my Catalogue into the waste basket after you have read it. The average strawberry yield in the U. S. A., to an acre is 2000 quarts. On page 15 I will show you how to multiply this by four. The finest berry this side of Texas. I have 500,000 Plants of the Howard 17.

C. S. PRATT, Athol, Mass.

Cultural methods have changed a great deal since the mystery in which Orchid culture was shrouded in the early beginning of Orchid Culture in this country as well as Europe was dispelled. It was found that there was no necessity of building special houses in which to grow Orchids and that the plants delighted in plenty of light, air and considerable sunshine.

The Orchid material, especially peat, was imported from Europe, while now thousands of barrels are exported to England, France and Belgium. In the early days of Orchid Culture the American growers depended solely on Europe, especially England, for their supply of plants, but since the eighties direct importations were made to the United States from different parts of the tropics in such a quantity that at times Orchids were exported to Europe.

Several Orchid Collectors left United States for the tropics and have successfully shipped great quantities of Orchids into the United States and such men as John E. Lager, Livingston, De Buck, Sachse, Massmann, Carrillo and others were pioneers in that line which has now been brought to a stand still on account of the unreasonable Quarantine No. 37.

Publishing Puzzles

It is a little hard for the average florist or gardener to realize the difficulties with which the trade press is struggling at the present time. If they did realize fully the nature of these difficulties, probably they would be even more willing than they are to give the papers their hearty support, both with subscriptions and advertising copy. The trade papers are necessary for the success of the trade. They fill a mission the importance of which is perhaps not fully appreciated. They are always ready to assist the trade in every undertaking which will better the business of the florists and the nurserymen. Yet they have not been able to participate in the prosperity which the florists in particular have enjoyed. A paragraph from the American Botanist, discussing this matter, is remarkably pertinent and is reproduced with considerable relish:

"When it is recalled that ordinary type-stickers are clamoring for more than a dollar an hour for a forty-hour week and that paper-makers are demanding from twelve to sixteen cents a pound for book paper worth about seven cents, it is easy to see what the publishers of magazines are up against. More than half of the strictly scientific magazines are now carried by publishers who have no hope of adequate return, but who continue to provide information in much the same spirit that the true scientist publishes his discoveries to the world. The editor is no exception to the general run and has gradually found himself in the position of the diminutive newsboy who was found buying papers for two cents and selling them for the same price. When asked what he got out of such a transaction he replied, 'I git a chance to holler!' There may be some who think that as long as the editor gets a chance to 'holler' he should be satisfied, but they fail to

consider what might happen if he gets tired of hollering. The best way to keep this magazine on the job is to push it whenever you can. Urge your friends to subscribe and mollify your enemies by subscribing for them!"

Horses vs Trucks

Many people have accepted as a fact the prevailing notion that horses are giving way to automobile delivery trucks so rapidly that in a short time they will practically cease to be seen on city streets. It appears, though, that a reaction is already setting in, and florists will be wise to carefully consider the comparative expense of maintaining horses and motor trucks under present conditions. A careful investigation has been made in Chicago, revealing the fact that not a few concerns are finding horses much more economical than motor driven vehicles. One Chicago newspaper, after trying machines for four or five years, went back to horses in 1919, putting on 132. It is reported that they have saved \$30,000.00 in the past year as a result of this move.

The United Delivery Co., of Evanston, Ill., which delivers packages for all the groceries in the town, states that it kept accurate costs for a year from December 1, 1918, to December 1, 1919, and found that it cost six and a fourth cents a package for horse delivery against eight and a fifth cents for auto truck delivery, Ford trucks being used. The company had one competitor who used trucks exclusively, and he has been driven out of business. This concern is now disposing of its automobiles, replacing them with horses.

It appears that the average life of a horse in the city is eight years. Then he sells for an average of one-fifth the original cost. It is on this basis that the horse wins out. After a careful comparison, a baking company found that it cost \$58.60 a month for the up-keep of horses and \$171.00 for the up-keep of its automobiles. The horses averaged ten years' usage, but the machines were junked in three years. Four years ago this company had 24 automobiles; now it has only three.

It is only recently that it has been possible to obtain reliable figures on which to scientifically gauge depreciation of motor trucks. Often the statement is heard that horses eat their heads off when they are kept idle, but that there is no cost for a machine when it is not in use. This is a tremendous mistake. The depreciation is going on all the time, and amounts to a much larger figure than the maintenance of horses, the depreciation of the latter being very much slower. It is well known that a motor truck sells at a greatly decreased price even though it has been used only a short time, while a horse often brings as much or more at the end of a year's service as when purchased. One contractor says that he can keep three teams in the barn cheaper than he can keep one of his big trucks idle. This is solely because of the rapid depreciation.

Investigation also shows that a number of concerns have become bankrupt simply because of their haste in loading up with delivery trucks. Certainly the horse has had the advantage during the past winter, for he seldom failed to get through, while automobiles were stuck all along the roads. It is said that at times within a radius of four miles of the heart of New York City, so many machines were stuck fast in the snow that it was difficult to get by even with horse drawn vehicles.

It is true that these facts and figures are quite contrary to what most people believe to be true, but they are indisputable, and florists as well as others who must make many and frequent deliveries, should carefully compare the relative cost of automobile trucks and horse drawn vehicles before they make any costly changes.

NURSERYMEN'S TRADE MARK.

It is to Be Used by all Members of the American Association.

The American Association of Nurserymen has designed a trade mark which has been duly filed for registration in Washington. It is expected that this new trade*mark will be used by members of the association throughout the country. It can be used only by members, and will identify them with the association's advertising and its standard of ethics as set forth in its advertisements to the public. In his announcement to the trade Secretary John Watson says:

The trade mark of your association has been duly filed for registration in Washington for protection against infringement. It can be used only by members; its use identifies members with the association, with the association's advertising and with the association's standard of ethics as set forth in its advertisements to the public.

The trade mark grew out of many hundreds of ideas suggested. It might be better; it is the best that could be evolved by those who made it. It holds these fundamental ideas:

Trees and plants; grown and sold by members of the American Association of Nurserymen; stock that is "Trustworthy"; buyers protected by the chain of 400 members standing for the fair deal.

The basic idea is in the association's amendment to its Constitution adopted in convention as Article IX, providing for fair dealing as a condition of membership, and setting up a Vigilance Committee to secure that.

That is the most outstanding fact in American Horticulture today. It means a new relationship between the nurserymen and the planter. It places this association in line with progressive business; it establishes new standards.

They are serviceable only if made known; the public is entitled to know what you stand for. You are entitled to have it known. In response to the action of your Market Develop-

ment Committee, taken after consulting you through the questionnaire distributed, advertising has been placed in the papers named below and in copy reprinted in this report.

Advertisements: The copy was carefully prepared and every statement thoughtfully weighed. The idea advanced and the policy advertised are found in Article IX above referred to.

Publications: The list now used does not include all the good papers; there are many others; when we have more money to spend, we can use more papers; those selected were carefully chosen because of their high standing, their large circulation and their distribution over the territory where our members are located. They all go to land-owners, home-owners, present or possible buyers of your goods—in short, to your customers. Every issue means carrying your message to over four million, six hundred thousand people directly interested.

No obligations have been assumed beyond the money actually on hand and appropriated for this purpose.

SEPARATING DAHLIA TUBERS.

Take the dahlia clump as it was harvested, with the portion of the original stalk from which the top was removed (same as shown in the accompanying illustration).

Upon examining the clump you will notice that the tubers formed at the base of the stalk, and that each tuber has a crown, neck and body. The crown being the building portion where it is connected with the clump, the neck the small portion between the crown and the body of the tuber.

By examining carefully, small eyes or sprouts can be detected on the crowns and stalk-base. These eyes produce the new plants, so in separating it is necessary that each tuber have an eye. Without an eye the tuber is absolutely worthless.

In separating a sharp knife should be used and great care taken. The best way is to remove each tuber individually, but in cutting it is necessary that each tuber have a crown or

a portion of the stalk, as it is upon this that all eyes grow.

First of all, select the tuber that you think can be most easily removed. With the point of your knife cut deeply into the base of the stalk (the black lines in the illustration showing place to cut), cutting so to leave an equal amount of the stalk-base for each tuber, and so that each tuber has its crown. By cutting deeply into the stalk-base on both sides, the tuber becomes separated from the clump, leaving a "V" shaped portion of the stalk-base as a crown or head, upon which the eye is found or will grow.

The next tuber favorably located from the separating standpoint can then be chosen, and removed by again cutting the stalk-base, and so on until the stalk-base becomes the crown of each individual tuber. When the tuber is planted, it should be laid flat six inches deep, so the crown, around which the new tubers form, will be sufficiently deep to have plenty of moisture, which is necessary that the tubers may develop properly. The sprout will grow from the crown and soon reach the top of the ground producing a plant, the stem of which when full grown becomes the stalk.

While some growers have been questioning the profit to be found in Callas, others are producing them in large numbers and seem to find them a paying proposition. From now on, however, it will be necessary to give them special care, keeping them fumigated at least once a week, as flies and thrips multiply rapidly at this season. There must be ventilation whenever possible, but the night temperature should be kept up to 60 degrees. Callas need an abundance of water at the roots, and a good syringing every day is required to keep thrips and red spider in check. Feeding with liquid manure is also a wise measure.

From now on ferns will need water without stint, and when possible it's a good plan to plunge them into sifted coal ashes. This can be done if they are in small pots and will help to prevent their drying out. Small doses of liquid manure once a week will help large ferns. As a rule a little shade will be required as the sun gets higher, to protect the foliage. Most ferns thrive with a night temperature of 60, but of course, moisture must be provided during the day by damping down two or three times. Ventilation without draughts is very essential.

If you expect to have good Baby Ramblers next Easter when they undoubtedly will be in great demand, it is time to start with one year old stock, potting up the little plants into six or seven-inch pots. It has been found that a soil consisting of fibrous loam, three parts, well decayed manure, one part, and a six-inch pot full of bone meal to a wheelbarrow load, will give good results. Be sure the soil is firmed around the

edges in the pots. The plants must be headed back hard and kept in a cool house with plenty of light and ventilation until they are high enough for supports. It is most imperative to give a regular syringing as otherwise the red spider is sure to appear.

Potted stock will need careful watching as the weather gets warmer with the ventilators up as the air dries out quickly. It is often necessary to water the outside row of plants even when those further in are fairly moist. Some gardeners make a practice of first watering the outside rows and then going over the whole bench again, with the result that the outside rows get a double dose of water. Water regularly across the bench, two rows at a time and then two rows back. This is much safer than skipping around. Syringing is also a matter to be done carefully, particularly when roses are in small pots. The operator should use a steady spray from side to side so that none of the plants will be knocked loose in the pots. The work should invariably be done in the morning, as early as possible. This is true of all roses, but applies with special force to American Beauties and other kinds which easily become spotted.

Occasionally a florist is found who has a good supply of Bleeding Heart, and there is every reason to believe that this plant would sell very well indeed at Easter time if it were offered freely. There is one point to remember if you want to make a friend of your customer. Be sure to tell him or her to keep water in the saucer under the pot as long as the plant is in bloom. Bleeding Heart and florists' Spiraeas are about the only common plants which thrive with this sort of treatment, but they thrive with water at the roots.

This is the season when the red spider gets busy in the carnation house, but the pest can be kept down pretty well by the free use of water. It is very important to have an abundance of ventilation in the carnation house from now on, for otherwise the hard growth required will not be developed.

ROSE SOCIETY FLOURISHING

Report of Treasurer Harry L. May
Submitted at the Annual Meeting.

It was expected that the Gertrude M. Hubbard gold medal would be presented to Mr. E. G. Hill, originator of the Rose Columbia, at the recent meeting of the American Rose Society at New York City, but as Mr. Hill could not personally be present, it was decided to postpone the presentation to a later date, probably some time in June. At this meeting the report of the treasurer, Harry L. May, was given and was as follows:

Receipts.

Cash on hand	\$2,137.58
Received from secretary	4519.07
Interest on mortgage certificates	150.00
Interest on permanent funds	30.04
Interest on general account..	3.59

\$6,840.28

Disbursements

Rose annual and printing.....	\$2,757.84
General expenses	834.21
Deposited in permanent funds	450.00

\$6,840.28

Permanent Fund.

Westchester & Bronx Title & Mortgage Guarantee Co.
Three mortgage certificates \$3,000.00
Summit Trust Co.
Permanent fund

950.00

Hubbard Memorial Fund for Medal

250.00

The executive nominated for honorary membership in the society, Dr. W. Van Fleet and John Cook. These men were elected by a unanimous standing vote.

The time and place of the next annual meeting was referred to the executive committee with power.

The following officers were unanimously elected: President, Robert Pyle, West Grove, Pa.; vice-president, F. L. Atkins, Rutherford, N. J.; secretary, E. A. White, Ithaca, N. Y.; treasurer, Harry L. May, Summit, N. J.; executive committee for three years, S. S. Pennock, Philadelphia, Pa., J. A. Currey, Portland, Ore., Thomas Roland, Nahant, Mass.

E. A. WHITE, Sec.

THE AMERICAN ROSE SOCIETY

The following rose has been accepted by the rose registration committee of the American Rose Society, and unless objections are received in the Secretary's office within three weeks of this publication the registration will become permanent.

NEWS NOTES.

Bloomfield, N. J. Jacob Hauck, the Montgomery St. florist, sustained a loss of about \$5,000 last Saturday. The boiler room adjoining his greenhouses was flooded, which put out the fires and ruined his stock of Easter lilies.

Clinton, Mass. Sawyer, the Florist, has moved his store to the Cannon Block, 190 High street.

Name. Red Columbia.

Class. Hybrid Tea.

Parentage. Sport of Columbia.

Description. General characteristics of this variety are identical with Columbia except the color is a brilliant scarlet, and the petalage is not so full as Columbia. The color is similar to Hoosier Beauty.

Originator. Jos. H. Hill Co.

E. A. WHITE, Sec.

ORCHID SHOW IN BOSTON.

Paid Admissions Numbered More Than Ten Thousand

The Orchid and Flower Show at Horticultural Hall, Boston, last week, proved one of the most successful exhibits ever given by the Massachusetts Horticultural Society. The show itself was of high quality and staged with great skill. The total paid admissions numbered over 10,000, and of course all the members of the society were entitled to free admission, so that the attendance was much greater.

At the close of the show on Sunday night, the cut orchids were distributed to the hospitals throughout the city at the request of Mr. Burrage.

Among the awards, the Arnold Arboretum received two gold medals for its Azaleas, and a certificate of merit for each one of the 50 varieties shown. This is a record never before equalled by any exhibit.

THE NATIONAL ORCHID ASSOCIATION

New Organization Formed During the Big Show in Boston Last Week.

At a meeting of orchid growers and enthusiasts, about 40 in number, which was held in Horticultural Hall, March 25th, it was decided to go ahead with the plan of organizing a National association. Thomas Roland of Nahant presided, and among those who spoke were Messrs. Manda, Lager, Rolker, Butterworth, Loveless and Craig. It seemed to be the general sentiment that while the Association should have the backing and support of the commercial growers, at the same time it should be devoted to the interests of the amateur orchid growers. It was proposed that so far as possible they be allowed to dictate the policy of the organization, although the commercial men have given their hearty support to every undertaking.

Mr. Loveless then moved that the matter of organizing be taken up. Mr. Roland was elected temporary chairman, Mr. Craig, temporary secretary, and Mr. Loveless, temporary treasurer, and the chair appointed a committee of three to nominate a committee of fifteen to form the executive committee. As many of those named on the executive committee were not present, it was decided not to give out the list until acceptances had been received. This committee of fifteen, together with the officers, will perfect the organization and will probably report at the Cleveland meeting of the S. A. F.

rolled as charter members of the organization.

There are great possibilities before the new orchid association, and it is believed by those behind it that it will become a powerful factor in exhibitions, in the matter of registration and classification and other ways relating to the orchid growing industry. Much needs to be done in the way of proper classification, and through the agency of such an organization work can be carried on much better than in any other manner. Eastern growers in particular are enthusiastic over the outlook for the society.

THE MARKET

As HORTICULTURE goes to press, the market begins to show a slight advance. There is every promise of abundant supplies, excepting that here and there a shortage of lilies is reported. Apparently, however, there are many more lilies in the country than florists in general realized. Reports show that normal importations were made last fall in spite of the rumored scarcity and the fact that one ship loaded with bulbs went down. It had been believed that the supply around

Boston was much smaller than usual, but still the price has not been as high as was anticipated. On Wednesday, lilies were selling at 20c. a bloom in Boston, and there was no insistent demand. In most other places reports showed prices from 20 to 30c., and all along the line there was a general advance promised. At the same time it was apparent that most all other flowers were in full supply.

Roses are selling in most markets for 8 and 10c., excepting Beauties, which are bringing up to 50c. Carnations have been pretty well down in Boston, running from 5 to 8c.; Pittsburgh reports them from 8 to 12c., which is more like the average in other cities. Sweet peas are down in some of the Western markets, selling as low as 75c.; in Boston they have been bringing from \$1 to \$3. Snapdragon seems to be rather higher in Boston than in Pittsburgh, for in the latter city they are down to \$1 and \$2. Freesias and jonquils are bringing about 6c. Violets are down to \$1 in Boston. Altogether the promise as we go to press is for a very good Easter trade, but without any special outstanding features.

RAMBLING OBSERVATIONS OF A ROVING GARDENER

I have a letter from Mr. Robert S. Sturtevant, of Wellesley, Secretary of the American Iris Society, in which he calls attention to an error in the March issue, when reference was made to the origin of the Iris Sherwin Wright. Mr. Sturtevant says:

"Iris Sherwin Wright was first listed in 1915 or 1916, by Martin Kohankie of Painesville, Ohio. It was found in a bed of Hector as I remember it, and the entire stock was sold to Henry A. Dreer and first listed by that firm in 1917. It grows thriftily, is about 27 inches tall and though not the only variety of its color, is an unusually vivid yellow. According to report it was originally named after two ladies, Mrs. Wright and Mrs. Sherwin, combined as Mrs. Sherwin-Wright, which has been well abbreviated by the omission of the 'Mrs.' in more recent catalogues.

"The American Iris Society wishes, whenever practical, to give proper credit to the original introducers; often this is impossible, but in this case the origin is well-known."

I am very glad to make the correction and to learn that the American Iris Society is so keen in watching out for every mis-statement which appears in regard to the flower for which it stands sponsor. This sort of thing helps to prevent any inaccuracies.

If I have not already spoken about the horticultural number of the Land-

scape Architects' Quarterly, I wish to say a word about it now, because it is a publication of great value to nurserymen and all others who have to deal with shrubby plants. This issue of the quarterly is given over almost wholly to a check list of the plants mentioned in the Arnold Arboretum Bulletins, which is to say, the native and foreign shrubs and trees which are growing in the Arnold Arboretum. It must have been a long and difficult task which Mr. Charles Downing Lay and Mr. Robert Wheelwright have carried out, but with this list to work from it is possible to learn the most important points about any of the hundreds of different plants, species and varieties which have been discussed in years past in the Bulletins of the Arboretum. In each case the approximate size of the plant, the time of flowering and the habitat are given, and in most instances more or less extended remarks are made. As a guide to the contents of the Arboretum, as well as a means of keeping track of the newer introductions, this issue of the Landscape Architects' Quarterly is of the greatest value.

It was with great pleasure that I learned of the plan to give away a bulb of the Regal lily to the first hundred people who got tickets each day for the Orchid Show at Horticultural Hall in Boston. In this way several hundred of these wonderful lilies will

be grown by people who probably would not otherwise have them in their gardens. In some instances there seems to be a belief that the lilies should not be planted except in the fall. As a matter of fact, if the bulbs are put in any time before the last of April, they should bloom the coming July, although perhaps being a week later than those planted last fall. I hope to see the time coming when the Regal lily will be as common as *Lilium speciosum* in all the gardens of this country.

After all, though, it was the value of the lily as a pot plant which impressed me most at the show. Those exhibited by the Farquhar Co. made a splendid display and proved beyond a doubt that the lily can easily be forced for, Easter and for the spring sales. Hard forcing had taken a little of the warm color from the throats of the lilies, but otherwise they were in excellent shape.

While the Japanese azaleas exhibited by the Arnold Arboretum excited a tremendous amount of interest, which was thoroughly well deserved, there were other azaleas at the show not to be overlooked. Certainly the display of azaleas staged by Walter Hunnewell, of Wellesley, and named Louisa Hunnewell in honor of the exhibitor's daughter, were well worth more than passing attention. These magnificent, strong growing azaleas, with their uniform yellow shade of blooms, attracted no little attention, and certainly reflected great credit on Supt. Hatfield's skill as a grower. Considerable has been heard about these azaleas in the past, and they justified all that was expected of them. Then, too, the specimens of forced *Azalea Kaempferi* shown by R. & J. Farquhar were notable for their excellence. This is a splendid azalea, either outdoors or in, and the Arnold Arboretum may well be proud of having introduced it.

In looking over the advertisement of Bees Ltd. in one of the English papers, I have been interested to find that the roses catalogued as being the best for English gardens are very similar to those which have proven of surpassing value in the gardens of America. Hybrid teas have the great preponderance, but numerous classes are made, one of them being devoted to "Town Roses." This list includes Caroline Testout, Frau Karl Druschki, George Dickson, J. B. Clark, Mme. E. Herriot, Mme. Ravary, Mrs. John Laing, Ulrich Brunner, and four others not so well known, namely Dr. O'Donel Browne, Gustave Grunerwald, La Tosca and Mme. Isaac Pereire.

The Regal Lily as a Pot Plant

George Watson's
Corner

"You in your small corner and me
in mine."

We had a pleasant visit recently from one of Chicago's live wires, Fred Lautenschlager of the Kroeschell Company. He reports an active business all over the country in their boiler outfits and also in their refrigerating specialty. The latter he particularly recommends as it is not only better and more effective than the Ammonia method but also much safer. Many of the wholesalers and others know from sad experience in recent years what it means for the ammonia system to get out of order, which it unfortunately has a habit of doing all the time. The expense is a serious factor and that is bad enough but worse than that even is the danger to human life. Anyone who is interested in putting in improved cooling apparatus will be well advised in consulting the Kroeschell people and for a clear and lucid exponent of all difficulties it would be hard to find a better expert than Mr. Lautenschlager. The big Kresge store and office building at 10th and Market street this city has recently been equipped with the Kroeschell system and their engineer will be glad to show the working of it to any one in this neighborhood who wishes to get posted. The Pennock Market is also thinking of installing it. The N. Y. district office of Kroeschell is in charge of Mr. Platt, who is also a master hand on this subject and will be glad to explain it.

John Burton has been keeping himself well under cover during the wintry weather and his city friends have seen little of him until recently. He looks hale and hearty and well fed—so he must differ from the bears in his winter retreat even if he does growl a little at the H. C. L., the fanatics and other things.

John Westcott made his first 1920 trip to Barnegat on the 27th. Had to get things started on the farm and take a whirl at the flounders and see about that old Barnegat Lighthouse of Uncle Sam's which needs fixing.

BLISSFUL IGNORANCE.

It was during the nerve-racking period of waiting for the signal to attack that a seasoned old sergeant noticed a young soldier fresh from home visibly affected by the nearness of the coming fight. His face was pale, his teeth chattering, and his

knees tried to touch each other. It was sheer nervousness, but the sergeant thought it was sheer funk.

"Tompkins," he whispered, "is it trembling you are for your dirty skin?"

"No, no, sergeant," said he, making a brave effort to still his limbs, "I'm trembling for the Germans; they don't know I'm here."

Rather feel that the answer to many of our friends in the craft is due to the fact that they don't fully realize the importance of their particular progress by the functioning of a National Campaign. One man recently stated that he couldn't see how he was to benefit in his particular locality if he sent in an appropriation to the National campaign fund, but would gladly contribute to a local fund as he then felt he would receive some direct benefit. This is what is rightfully termed as blissful ignorance.

Realize if you can the importance of the accumulation of moneys from all over the country to be spent nationally where everyone shares in the general result, as against the folly of just purely a local campaign, where just a few benefit.

Can you appreciate the importance of the interchange of orders from one section to another as occasioned by the telegraphing of orders by the retailers—so it works out in the same manner by National Advertising, backed up by local advertising. Where as the demand may be here and there, each shares in the efforts thus produced, making it felt more broadly in its purpose, thus, Peter gains in the East and John in the West—all working for the general success.

Now send in your contribution and make your fellow associates know

NATIONAL FLOWER SHOW COMMITTEE.

A meeting of the National Flower Show Committee of the S. A. F. and O. H. was held at the Grand Central Palace, New York, on Wednesday morning, March 17.

There were present: Chairman George Asmus, Chicago, Ill.; Secretary John Young, New York; Thomas Roland, Nahant, Mass.; Patrick Welch, Boston, Mass.; Herman P. Knoble, Cleveland, Ohio; and F. H. Traendly, New York. Prof. E. A. White, Ithaca, N. Y., represented the American Rose Society, and Samuel J. Goddard, Framingham, Mass., the American Carnation Society. There were also present Wallace R. Pierson, Cromwell, Conn., C. H. Totty, Madison, N. J., and

President A. L. Miller of the S. A. F. and O. H.

Selection of a city in which to hold the next National Flower Show was the first business of the meeting. Mr. Knoble suggested Cleveland as a city which could house the show satisfactorily. The new Municipal Building in that city, he said, was expected to be completed in about a year, and he had every reason to believe that advantageous arrangements could be made with the proper authorities for the use of the main hall for the show. The various horticultural interests of Cleveland were, he said, most anxious that the next show be held in their city. On motion of Mr. Roland, seconded by Mr. Welch, it was decided that the next show be held in Cleveland, in the spring of 1922, providing adequate arrangements can be made with the Cleveland interests. Mr. Knoble moved, seconded

by Mr. Roland, that the Show open on Saturday, March 25, and close on Saturday, April 1, and a poll vote resulted in the unanimous adoption of these dates, which were considered most desirable, Easter in 1922 falling on April 16.

Mr. Roland emphasized the importance of preparing and distributing a preliminary schedule of premiums for plants at as early a date as possible, and recommended that a subcommittee be appointed to prepare such a schedule, and submit the same at a later meeting of the committee, which should be held, in the near future, in Cleveland, and then and there settled. The month of June was suggested as a good season for this meeting. The chairman appointed Messrs. Roland, Traendly, Knoble, and William H. Duckham as such subcommittee.

Prof. White received the assurance of the committee that the same arrangements made for the co-operation of the American Rose Society in the projected National Flower Show in St. Louis in 1918, which show was, owing to the circumstances, postponed, would be entered into for the Cleveland Show; and Mr. Goddard, for the American Carnation Society, was given similar assurance.

By unanimous vote the subcommittee on schedule was given authority to prepare a preliminary schedule of prizes, which should not exceed a total value of \$20,000, this amount to include all special premiums which might be offered, and which it was distinctly understood should be applied to the reduction of the amount of the total.

Mr. Knoble was requested to take the necessary steps for organizing the local interests of Cleveland, so that an open meeting could be held at the time of the meeting of the committee there in June when matters pertaining to the show could be fully discussed; and he was given authority to arrange for this meeting.

It was voted that Chairman Asmus and Mr. Knoble be appointed a committee to negotiate with the proper authorities for quarters for the show.

The chairman announced that, fol-

1201 Race St. Philadelphia, Pa.

Following the precedent set in Philadelphia, at the proper time various committees would be appointed to take charge of the work of the show.

The secretary was authorized to proceed at once with the selling of space in the trade section of the show, with the understanding that if for any reason the show be not held in Cleveland, the contracts made would become void through cancellation. The rates for space it was arranged should be determined at the next meeting of the committee.

JOHN YOUNG, Secy.

1170 Broadway, New York City.

"BEARDED IRIS" PREFERRED

American Iris Society Like That
Name Better Than Liberty Iris.

Dear Sir:

I was interested to see in your issue of March 20th, in your department, "Rambling Observations of a Roving Gardener" a reference to the fact that some nurserymen have rechristened the so-called German Iris "Liberty Iris".

We feel in this society that the name "Liberty Iris", from whatever patriotic motives it may have been originally inspired, is not a name that will long survive in our catalogs or in our gardens. As your correspondent says, it is sometimes difficult to carry through an innovation of this sort, particularly when such innovation has no sound reasoning behind it. The name "German" is or course a misnomer as we have no evidence that any of the Bearded Irises are native to Germany; but most gardeners seem unaware of the fact that botanically the name "Iris germanica" applies only to a very small group of the bearded irises of gardens, namely to the early blooming purple flag, to Florentina, Fontarabie, Kharpur, Kochii, Siwa, etc., all of which botanically are closely related to Iris germanica.

The great majority of our garden Irises are forms of hybrids of Iris pallida of Italy and Asia Minor, and of Iris variegata of Hungary and South-eastern Europe. They have no close relationship to Iris germanica nor has the latter name ever been rightfully applied to them. The American Iris Society will endeavor to popularize, instead of the meaningless name "Liberty Iris" the name "Bearded Iris," a name already in common usage, and a name instantly differentiating the Irises of this great group, from the Irises of the other great group, the "Beardless Iris" which includes such garden favorites as the Siberian Iris; our native swamp Iris, vericolor; the true French Fleur de Lis, Iris Pseudacorus; and the wonderful Japanese Irises, forms of I. Kaempferi.

We believe the names "Bearded" and "Beardless" will soon become standard in both American and English horticulture, and that the French or Latin forms of these names will be used in France. Under botanical rules Iris germanica must continue to be the name representing a small section of the great group of Bearded Irises.

Yours truly

JOHN C. WINTER.

THE WILD GARDENS.

The wonderful display of orchids is over. Like visitants from strange and tropical lands they have come to us with their marvelous beauty of form and color. They have been with us and gone almost as we watch a butterfly gorgeous with the color in its wings hovering over a flower then gone from among us.

In form and color the orchids are perhaps the most beautiful of flowers. If they lack a grace it is that of old association. They are not yet dear to us because we have picked them with our mothers as children, because we have carried them in the old days to some favored teacher at school.

For this wealth of association let us return to New England. Let us in May show the beauty of our native flora in the little miniature rock garden which will then be seen. Let us show the graceful beauty of our own native red columbine against some gray stone in these miniature gardens, or against a seedling cedar or pine. Then there is the dainty white violet, so small that we almost tread it under foot as we walk in our woodland ways. The exquisite viola pedata with its yellow eye. The pink moccasin flower around which the gnomes and fairies dance in our woods each night. While Jack in the Pulpit will hold his service on Sundays with the Trillium Grandiflora lifting their white faces in adoration and prayer.

These are the flowers of our New England woods, these are the flowers with which we will open Horticultural Hall to the enjoyment of the people.

Our boys have died among the poppies of France and of Flanders, but with the true spirit of democracy we can honor their memory with the wild flowers of New England displayed in our hall.

WHY?

A. H. HEWS & CO., INC.
Cambridge, Mass.

The Center Distance Between Columns In This 78-Foot House Is Wider Than The Widest Houses Used To Be

WELL do I remember going into one of our first 40-foot houses on a Winter's moonlight night, and the owner calling attention to how wonderfully light it was.

Early the next morning when we again visited it, the air was so noticeably fresh in contrast to his narrow 28-foot houses. Comparison of the coal used, proved the 40-foot one took practically no more to heat it than the narrow one.

That 40-foot house would just about fit in nicely between the two columns of this 78-foot house of Willig's at Poughkeepsie, N. Y.

If the 40-foot house was so much lighter and heated so economically, it's plain to be seen that this 78-foot one had proportionate advantages over the 40.

Consider the reason for the increase in lightness. The roof framing members are so far from the plants that any shade they do cast is so thinned out or diffused that its effect on the plants is next to nothing.

When it comes to the heating, the big volume of air when once it's warmed up, holds the heat and acts as an insulation against sudden changes of tem-

perature. Willig says it will protect the plants for over an hour against even a severe drop in the mercury.

When it comes to the ventilation, growers long ago found they could open a ridge vent practically any day without injury. The freshness and buoyancy of the air in such houses is one of the vital reasons for the vigor of the plants and quantity and quality of blooms.

As for working these big houses, it's as plain as the nose on your face that it costs less than running in and out, and up and down several small ones.

When it comes to proportionate cost of the first building and the after cost of keeping it up, the big house covering the same ground space has the small houses backed off the boards. There is simply no comparison.

All of these facts and figures, of course, apply to our iron frame construction. In the next two ads. we will tell you some direct construction points about this 78-footer.

Be on the lookout for them. And remember that we go anywhere for business.

FERNS

THE VICTORY FERN (*Nephrolepis victoria*)

We take pleasure in offering this new and valuable variety of *Nephrolepis*. It is a beautifully crested form of "Teddy, Jr." with fronds frequently subdivided on the ends, making a most unique, distinct, and desirable variety.

This fern was

AWARDED A BRONZE MEDAL

at the S. A. F. Convention at Detroit in August, 1919. The judges of the award reported as follows: "Special stress is laid on the new fern Victory, with a rapid growth and a branching at end of fronds, making it a shapely plant. It should be a commercial success, and we **RECOMMEND IT MOST HIGHLY.**"

S. A. F. & O. H. Department

NATIONAL PUBLICITY CAMPAIGN.

With Easter behind us we may now look forward to another important flower day—Mother's Day, May 9th. Our campaign advertising program has provided for liberal space in the magazines for advertisements covering this day. Florists who use the advertising columns of their local newspapers and who have not availed themselves of the special electrotype issued for this day by our Promotion Bureau should at least use the slogan "Say it with Flowers" prominently in their announcements, for such use in good measure links up with the national advertising. The more the slogan is used, the better it is for our industry.

It has been erroneously reported that our Promotion Bureau is to be removed to a western office. The bureau probably has been confused with our department which has all along handled our dealers' helps, and which is to be transferred to Chicago. The amount of business transacted by this department becoming too great for the small staff maintained in our Promotion Bureau, and an extension of our service being considered advisable, our committee at its last meeting decided to open what is to be known as "The Florists' Publicity Service Bureau of the S. A. F. and O. H.," which is to be conducted, under the management of H. V. Swenson, at 431 South Dearborn street, Chicago, and to which is to be transferred, as soon as possible, our stock of electrotypes, signs, stickers and other dealers' helps handled by the Promotion Bureau. The Promotion Bureau remains as part of the administration offices of the society at 1170 Broadway, New York.

In everything but funds the organization of our publicity campaign is very complete. It is unfortunate that a better response is not made to our appeals for contributions to the fund. A big and profitable industry such as ours should be able to provide the \$100,000 fund for one year's work that our committee so earnestly desires, less than an average of five dollars per head from those who are conducting florist establishments. A contribution should not be considered as in the category of many other contributions a business man is called upon to make, as for churches, institutions, local enterprises and functions.

McHITCHISON & CO. 95 Chambers St.
NEW YORK

It is a contribution he owes to him self. It is an investment in the clear sense of the term. It is an investment of a very small sum of money in a fund for advertising the florist business, the business from which all in the trade make their living, so that they can make more than a mere competence. It is a business proposition, the success of which has already been assured. Until this campaign started the florist industry, unlike other industries no more important, was never advertised. It was not in the public eye, and suffered in consequence. The publicity we have secured in the last two years has worked wonders. Never were flowers in better demand than they are today, for people have been brought to look upon them as necessities in every home of refinement. Many now make the permanent decorations of their living rooms in neutral color so that flowers shall give the color note, changeable at will. Remembrance of anniversaries by gifts of flowers was never so general as it is today. And what has caused all this? Simply the publicity which has been provided by our campaign. And you, Mr. Nonsubscriber, are asked to contribute a small share of the expense, yet hesitate to come across with your mite. You want to see the good work go on, without doubt. Then sit right down, no better time than now, write out your cheque for what you think you can afford and send it in to the secretary—it is needed.

JOHN YOUNG, Sec.

1170 Broadway, New York.

CHARLES F. FAIRBANKS HEADS GLADIOLUS SOCIETY.

The Massachusetts Gladiolus Society was formed Saturday afternoon at a meeting in Horticultural Hall for the purpose of educating people in the appreciation of this flower. An annual exhibit will be given in Horticultural Hall in August.

Charles Frank Fairbanks, of Lexington was elected president. Other officers are: S. E. Spencer of Woburn, first vice-president; John Zeestratton of Mansfield, second vice-president; C. W. Brown of Ashland, treasurer; Robert R. Walker of Mansfield, secretary; Jelle Roos, A. S. Stephen, S. E. Spencer, executive committee; E. M. Fischer, Thomas Proctor, M. L. Gage, exhibition committee.

April 30 and October 12 have been named as arbor and bird days by Governor Lowden of Illinois. It seems as though the nurserymen might be able to do some extra business by bearing these dates in mind.

MRS. BULLOCK VERY ILL

The many friends of Mrs. E. M. Bullock, Elkhart, Ind., member of Ladies S. A. F. and life member of S. A. F. & O. H. will be very sorry to learn that she has been critically ill of bright's disease, with other complications since the middle of January, at present writing is only able to sit up a few minutes at a time. Mrs. Bullock

is well known to the florist trade from coast to coast, and many will be the wishes for her speedy recovery.

MRS. CHAS. H. MAYNARD.

Marion, Ohio.

GENERAL NEWS.

John O. Button, of Farmingdale, N. J., is planning to build several large greenhouses in the near future.

Miss Helen Kenyon and Miss Ade

laide Roberts, of the Department of Botany at Vassar College, have been elected members of the Duchess County, N. Y., Horticultural Society, the first women to be honored in that way. The society and the college are now planning for closer co-operation, and a committee to work for that end has been appointed, consisting of N. Har-old Cottam, William Ingalls, William Howells and Fred Stopher.

No. 15

THE TALK OF THE TRADE

The accompanying illustration portrays a feature of the exhibit made by the Beacon Florist, J. Eiseman, at the recent flower show in Boston. It doesn't by any means do justice to the design, because the delicate colors of the flowers cannot be reproduced. The framed bouquet attracted no little attention and brought Mr. Eiseman many hearty compliments. The idea is one which he has used for several years, and which probably will be taken up in a more general way as it offers many possibilities. Although the holder does not appear at all, the flower stems are in water so that the flowers keep fresh a long time.

There is something wrong with the system which results in seedsmen sending out two or three duplicate catalogues to the same family and even to the same individual. It would be impossible to estimate the waste of paper and postage which results from this duplication. It has occurred to me that the difficulty might be overcome by adopting the plan used by a large mail order house in New York. Once a year this house sends out a return postcard with the following line at the top: "You may send me free my copy of your new spring and summer book. Please mail to this address." Lines for the address then follow, and below them is printed the following: "You have been sending more than one copy of your catalogue to the members of my family. Please remove from your mailing list the names which I give below." Then there are five lines for such names. By using this card it is possible to keep the list constantly revised, for it can be pretty confidently assumed that only those who are willing to return the card are likely to develop into buyers. At any rate it helps to get rid of duplication waste.

One of the most unusual pieces of advertising ever undertaken in the trade was carried out by the American Bulb Co., of Chicago, just before Easter. Copy which took a large part of a page was inserted in the Chicago Sunday Tribune, which is read by nearly ten million people and reaches every city in the United States. This

advertisement was entitled "The Romance of your Easter Lily," and reviewed the growing of the bulbs, their long trip across the sea and their forcing in the green house. It was handsomely illustrated and concluded in large letters with the slogan, "Say It with Flowers."

This advertisement, while paid for by the American Bulb Co., was designed to serve all the florists of the country by creating an interest on the part of the public in the buying of Easter lilies. It is the first time that this concern has ever advertised direct to the public the products which it sells to the florists. We are glad that many florists were able to cooperate by displaying copies of the advertisement in their windows. This sort of advertising is bound to be very helpful, and may perhaps mark a new epoch in successful methods of reaching the public.

Apparently there is considerable difference of opinion among florist as to the relative values of the calla and the Easter lily. The question has been up for discussion in the Canadian Florist and the answers vary. According to

W. L. Lindsay of Tillsonburg, Ont., callas are gaining as a staple flower, Mr. Lindsay says:

"People have got over the old time objection and, with most customers, they are well liked. The Easter lily would soon be forgotten were it not for its association with Easter."

W. G. Peacock, Brampton, says: "We are forcing these every month now, and always arrange to bring in specially large quantities at holiday times. They have been more in demand than ever since the price advanced last year, but they last a long time, and are as much sought after for weddings as for funerals."

Alfred Deal & Son of Stratford, Ont., also says that callas are as popular as ever and thus there is a continuous demand for them for funeral work.

Quite a different story is told by W. W. Walker, of St. Catharines who says, "The casual outsider might think, from not seeing the usual large number of these two lilies, that they were not as popular as formerly. The explanation of this is that the older type of florist, who considered the calla lily as necessary to a floral design or for funeral work, is being gradually replaced by a younger generation, who want to know whether or not the calla can

Mr. Eiseman's Unique Design

be made to pay at the price it is usually sold at. The answer would be, in eight out of ten cases, that we could not get returns enough to warrant the growing of this stock, as callas usually begin to crop in the usual greenhouse temperature at a time when other flowers are beginning to come in that cost only one-half the amount in regard to their value in design work."

In the opinion of Chas. Craig, of Ottawa the calla is not looked upon as one of the aristocrats of the greenhouse of the present day. "Years ago" he said "before carnations, roses, etc., attained the perfection of to-day, the calla had a premier place. There is still a steady demand for the flowers, and for design work it is still hard to beat. From my experience in handling the Easter lily," he continued, "I would say that it was never more popular. When Easter comes, it is hard to have too many, and they are always useful all the year round."

At the recent orchid show in Boston Mr. John E. Lager, of Lager & Hurrell, was very frank in giving his opinion of Quarantine No. 37. He said:

"The action taken by the Federal Horticultural Board during the past year in excluding orchids from this country is without a shadow of justification. Among other things this means that collecting orchids in the wilds is a thing of the past as far as this country is concerned. For my own part I cannot express in words the deep regret and sorrow I feel in being deprived of the privilege to go into the mysterious tropical forests searching for these orchids which we all love so well. Collecting orchids, to a man who loves them, cannot be measured in dollars and cents only. The romance and charm connected with these plants is the very soul of the entire family of the orchids. Another important fact in connection with orchid collecting is that much geographical knowledge and that of economics has been disseminated through these collectors, and hence we feel as a class that our lives have not been spent in vain, for in most cases we have made two blades of grass grow where only one grew before."

YOUNG BUT SUCCESSFUL.

J. Harper Hetherington, Newly Elected President Washington Florists' Club.

J. Harper Hetherington, one of the youngest and most prominent members of the Florists' Club of Washington, will assume the presidency of

that organization at its next meeting. At the annual meeting, held March 2, he was unanimously elected.

Mr. Hetherington was born in Philadelphia thirty-one years ago. He is the son of the late Joseph H. Hetherington who served more than thirty years in the employ of Robert Craig & Company, in Philadelphia. Here was where the new president obtained his first knowledge of the florist business. While going to school he worked in the Craig place during his spare time. At the age of fifteen he was regularly put on the payroll of the concern. About four years later he went to work in the Century Flower Shop of H. H. Battles, remaining there about four years.

From the Century Flower Shop he came to Washington and secured employment with Fred H. Kramer, at 916 F Street, Northwest, and 18 months later he joined the Washington Floral Company. For the past five years he has been the manager of this concern which enjoys a healthy and growing wholesale and retail business.

Mr. Hetherington has been quite active in club affairs, especially during the last year and aided materially in putting across the "Say It With Flowers" Week in Washington.

AMERICAN CARNATION SOCIETY.

The American Carnation Society has continued the committee which was to look after the welfare of Belgium, France and possibly England insofar as new varieties of carnations are concerned. It is herewith requested that our leading growers send the introductions of the past two years insofar as it is possible to either Mr. W. E. Wallace, Eaton Bing, Dunstable, England, or Mr. C. Engleman, Saffron, Waldon, Essex County, England. These gentlemen will see that any plants which arrive in their care will be properly distributed and have made arrangements for same. Also please see that the information with regard to the sending is mailed to the committee. Since the American Carnation Society has undertaken this kindness, every prominent grower of carnations ought to do his part.

IRWIN BERTERMAN,
THEODORE DORNER,
J. H. DUNLOP.

FORCING LILACS

Garden makers often inquire about the forcing of lilacs in the spring. Much of the advice given is not very well

thought out, but Mr. T. Arnold writing in Gardening Illustrated goes into the matter very intelligently. To begin with, he says that it is one of the best of hardy shrubs for forcing, for the forcing can be done in almost any place where a temperature of fifty degrees can be maintained. Even a cellar or dark mushroom house will answer. He explained, though, that under such conditions the flowers of all varieties will be white, and that there will be an absence of foliage. Mr. Arnold goes on to say that the advice often given to dig up large bushes from the shrubbery and either place them in large pots or wrap the roots in damp mats and take them to the heat at once is all wrong, as it will result in a great percentage of the most promising buds coming blind. It is far better, he says, to use smaller plants in pots and to select only kinds which are known to force well, refusing, of course, all grafted plants.

The most essential detail in preparing lilacs for forcing is to encourage well matured growth in previous years and to make stout well-ripened shoots by carefully running the spade around each plant and lifting slightly early in September. This plan checks the growth sufficiently to make the buds mature thoroughly. If convenient the plants may be potted up as soon as the leaves change color, but kept in the sun and air as long as possible to mature the buds still further and bring the plants into condition for hard forcing. After the finest plants are flowered they can be planted out again and the second year after be ready for house decoration again.

NEWS NOTES.

Benjamin F. Brown, president of the Brown Bag Filling Machine Co., Fitchburg, Mass., is suffering from a fractured hip caused from a fall on the ice recently.

Looking about for an opportunity for broadening their field, Vogt & Son, of Coldwater, Mich., have arranged for opening a store in Flint. They have bought a residence which happened to be well located for their purpose and are remodeling it for flower store purposes.

O. G. Rindom, formerly manager of a real estate firm in Wichita, Kan., has taken charge of Riverside Gardens, Emporia, Kan.

Gove, the Florist, of Burlington, Vt. announces that he has secured Mr. Chas. Wilson as manager of their flower store. Mr. Wilson was formerly assistant manager of one of the leading Canadian flower stores.

Little Talks on Advertising

When asked what kind of advertising is most productive, Van Camp, the baked bean man, said that he couldn't tell, but what he did know was that when he advertised he got the business and when he didn't advertise he didn't get it, and he proposed to keep on advertising.

That policy is quite a different one from the policy of too many florists, which seems to be to stop their advertising if they don't get their money back with a good premium every time they use an inch or two of space. Advertising cannot be tested on the basis of small individual ads and especially keyed ads. Advertising, if properly done, is much like bread cast upon the waters. It is certain to return, although perhaps not until after many days. The reservation that it be properly done, however, is not one to be overlooked. It must frankly be admitted that much advertising is wasted because it does not comply with the basic principles of advertising.

I have been interested to follow the advertising being put out by the florists of Ohio, which has been quite voluminous of late, and in many instances highly creditable. One of the most extensive advertisers is Schneider, of Springfield, Ohio. He uses a generous amount of space, and puts up his material in much the same way as a department store. In one of his ads this announcement is made in big type which should at least draw the public into the store:

**SCHNEIDER'S
THE STORE BEAUTIFUL
SHOWING
FLORAL DECORATIONS
for
SPRING**

J. G. Botkin & Sons, of Urbana, use "Say it with flowers," conspicuously and elaborate the thought as follows:

Flowers in the sick room are like sunshine. If you have a smile, send it with flowers. You surely will find flowers led to tell what in no other way could be said so well.

Payen of Youngstown suggests using flowers in several ways—

Flowers most attractive for anniversaries and birthdays.

A gift of flowers for courtesies received.

Flowers arranged for parties and receptions.

Wedding bouquets and decorations.

Halbrooks, of Newark, is another florist who believes in using the "Say it with flowers" slogan for all it is worth. He supplements it with some interesting and tactful arguments on flower giving when he says:

The love of a lad for a lass makes flowers the medium for carrying sweet, silent expressions. Flowers carry a message of condolence to those who mourn the loss of a dear one, a soothing message that there is still warmth in the world. The price is "the will to convey a thought."

One of the prettiest and I think the most attractive Ohio advertisements is that of the Jones Russell Co., of Cleveland, which is reproduced herewith. This is good advertising because it sets out the article for sale, gives the price, and does it in such a way as to arouse the cupidity of the public, which after all is the thing sought for.

I have often spoken of the advantage of featuring one single article, and Randolph & McClements, of Pittsburgh, Pa., apparently have the same view. A recent advertisement two columns wide has a large drawing of a Cineraria, above which are the words in bold type "SPECIAL SALE OF CINERARIA PLANTS. Starry flowers in brilliant colors, our own cultivation, price \$1.50." It seems to me that that is good advertising because it is sure to attract the eye and likely to draw customers to the store.

Roses
\$2.50 a dozen
FOR the remainder of the week we are featuring roses in several varieties at \$2.50 a dozen and up.

Primroses
\$1.00
THE first consignment was sold out quickly. This is a second shipment of exactly the same fine baby primrose plants specially priced.

Bulletin Building PHILADELPHIA

VACUUM CLEANERS IN GREENHOUSE.

The suggestion that vacuum cleaners be used for greenhouse work has been taken up by various papers here and there, across the water as well as in America, sometimes seriously and sometimes in a humorous vein. The Philadelphia Record some days ago suggested that the principle be used for disposing of New Jersey's famous mosquitoes, devising a huge mosquito absorber for the purpose. This led a reader of the Record to write a serious letter, pointing out that there is real merit in the scheme, so far as it applies to greenhouse work. The letter is as follows:

A few days ago you published an editorial in which you suggested to the great state of New Jersey how they may employ the vacuum cleaner principle in sucking up mosquitoes attracted to a strong light or lights set up at suitable intervals at infested areas.

Judging from the tone of your editorial, it was half in jest and half in earnest; but I can assure you that this principle is going to be developed in horticulture, and in all probability with very satisfactory results; and no doubt the state of New Jersey could not do much better than accept your suggestion, and in all probability even that plan would prove a success.

The principle of vacuum suction is being thoroughly experimented with, and as soon as the matter is ripe and ready for publication it will be given publicity in the horticultural press, and I will be very glad to call your attention to the *modus operandi*, as everybody will be free to use the designated tools.

Entered as second-class matter December 8, 1904, at the Post Office at Boston, Mass., under the Act of Congress of March 3, 1897.

The daily papers have been making much of a report sent out from Washington regarding experiments made by experts of the Agricultural Department, which seem to show that plant life depends more on light than temperature for its growth, and that flowering may be regulated to a large extent by the use of artificial light and means for excluding sunlight. The report says that the principle is revolutionary, but as a matter of fact, experiments have been made by practical growers as well as by theorists, during many years, to show the influence of electric lights on plants. The late W. W. Rawson, of Boston, at one time made many experiments of this sort in his greenhouse at Arlington.

At the same time it may be that discoveries have been made which will prove of extreme importance to florists. In any event, the work which is being done by the Department of Agriculture will interest all commercial growers. According to the Department's announcement, the flowering and fruiting period of practically any plant can be made to take place at any time of year by darkening the greenhouse in the morning and evening if the day is too long by lengthening the day by artificial light if the day is too short. As it is now, these results are obtained in a large measure by regulating the temperature. Easter lilies are brought to maturity at just the right season by this method. It was by this same method that the wonderful Japanese Azaleas which E. H. Wilson brought back from the Orient were made to flower at exactly the week when the big Boston show was held.

Yet according to the Washington reports temperature appeared to exert no influence in the tests made by the department experts. Experiments did show, though, it is claimed, that too little sleep or in other words, too many hours of daylight, were sufficient to prevent many plants from ever reaching the flowering or fruiting stage. A striking illustration of the relative importance of temperature is given in the fact that plants kept in the dark for part of the day underwent in mid-summer the changes that in nature come in the fall, and that heretofore have been attributed to lower temperature. This was true, it is stated, even when the dark house registered a higher temperature than the outside atmosphere.

Artificial light served to bring certain plants into bloom much earlier than under normal conditions. Irises, for example, given electric lights for eighteen hours a day, bloomed in two months, while others in the same temperature, but without artificial light required months longer.

"The length of the day" the department announcement says, "is proved to be the most potent factor in determining the relative proportions between the vegetative and fruiting parts of many crop plants. Indeed, fruiting may be completely suppressed by a day too long or too short. This new principle undoubtedly explains the erratic behavior which has been observed with many crops when they are shifted to different latitudes."

The scientists used dark chambers by which they shortened or lengthened the life cycle of plants, and forced some of them to complete two cycles in one season. These reported results are quite different, of course, from what florists have been taught to accept. It will be hard even now for them to believe that temperature is not a matter of importance. They will ask, perhaps, how it happens that the Japanese witchhazels, which in warm winters bloom in the Arnold Arboretum in January or February at the latest, did not bloom this season, after a long, cold winter, until March. They may also ask an explanation of the fact that in England, where temperatures have been unusually mild the past winter, many of the common shrubs are flowering long ahead of their usual dates. It may be said that the winter in this country has shown more dark days than usual, and that in England less, but that would hardly be a satisfactory explanation of the great difference in blooming time. On the whole, it must be admitted that the light averages about the same each season.

Perhaps, however, we have not yet received the whole story from Washington. It is quite possible that the use of artificial lights will indeed revolutionize the growing of both flowers and vegetables under glass. New and unexpected developments may come at any time. We are no longer surprised at them or inclined to belittle them until their value has been determined upon by practical experiments. It may be that in the future every greenhouse will have its special lighting arrangements, and that growers will have to study the effects of light and darkness from a new viewpoint.

It may be, as the papers say, that the peak has been reached in the steadily increasing cost of supplies in many lines, but it is not easy to see where this applies to the florists' business. Take the item of coal alone. Where ordinarily a drop may be expected at this season as an inducement for early buying, we find a startling advance instead, with no prospect of any drop at all. The coal situation is one which means much to every grower. It takes a large part of his income to pay the coal bill at best. Coal he must have, though, if he is to do business at all, and with railroad matters in their present chaotic condition there is no assurance that coal will move at all freely for many months to come. As a matter of mere discretion, therefore, it would seem wise to get in one's order even though the price be high.

Then it is much the same with supplies from abroad. Every report from France and Germany shows that chiffon is on the advance, and that very much higher prices are bound to prevail. In fact, foreign markets all along the line are rapidly tagging that of this country. The nursery-men have found that out when they have tried to buy stock of any kind, even fruit stock.

Express rates are on the advance, too, so that everything considered, there is little hope of cutting costs for a long time.

GROWING CINERARIAS

How to Be Successful in the Cultivation of These Plants

Cinerarias are divided into three classes — cineraria maxima superba, cineraria stellata and the intermediate types. The first is the florist or dwarf type. Seeds of this variety should be sown in April, and if properly handled will bloom the latter part of December. Other sowings should be made at intervals of three or four weeks, in order to extend the flowering season. The stellata variety should be sown in May, followed by a second sowing in June. The intermediate is a cross between cineraria maxima superba and stellata. Seeds of this variety should be sown at the same time as the above mentioned.

A compost of a turfy loam mixed with a little leaf-mould and sand is the soil medium which will grow these plants to perfection. Care must be exercised in choosing the soil, for if it is too rich in humus, it tends to the production of foliage rather than bloom. Seeds should be sown in pans or flats, and special attention should be given to the drainage. Cover with sifted soil to a depth of about twice the diameter of the seed. Give a good watering, cover with a piece of glass and paper, and keep in a cool house. Immediately the seedlings appear remove the covering. Directly the plants begin to show their second leaves transplant them into flats or pots. The former method is preferred because at that season of the year the pots dry out quickly. When pricked off into flats about three inches apart each way, it allows them sufficient space for three or four weeks' growth and they are not so liable to dry out. Directly the plants begin to touch each other transfer them into 4-inch or 4½-inch pots, and after these pots are filled with roots, repot into 6-inch. The dwarf-growing varieties do not require a pot larger than 6 inches, the intermediates 6 inches or 7 inches. The tall star variety, however, should be potted on into 7 or 8-inch pots and the latter plants, when properly handled, will develop into beautiful specimens.

Cinerarias should be grown as hardy as the season will allow. During the summer months the best place for these plants is in a cold frame. Give water freely and syringe morning and evening during hot weather. From the time the seedlings appear they should be shaded from the sun with cheesecloth or some other suitable material. Air should be freely admitted by leaving the sashes open at night unless

there is danger of frost. About the middle of September, or even later, depending on the weather and locality, these plants should be removed to the greenhouse, as, at this season, they should be quite hardy and will stand the full sun. We can now admit plenty of air, and also use the syringe freely during hot weather.

By the end of September most of the plants should be in their flowering pots. Those that were potted earlier in the season will require a little feeding, and weak liquid manure should be given once a week. Directly the flowers begin to appear the feeding should be discontinued. The temperature should be kept around 50 deg. F. during the night. The cineraria delights in a cool, moist atmosphere. During the dull fall and winter months water should be given sparingly, as many plants are lost through lack of knowledge in this respect.

**Flowers Under
Glass**

If you are growing asparagus plum-
osus you will find it advisable to give
the surface of the soil a good sprink-
ling with bone meal and wood ashes
as soon as you see an abundance of new
growth starting up. After that you
need a mulch of cow manure and soil
in equal parts. This mulch should be
from one to two inches deep. During
the summer it will be advisable if not
imperative to give the plants liquid
manure at least once a week. Other-
wise the soil may become exhausted.

Perhaps you have some asparagus
on benches that has been cut pretty
hard. This should be kept on the dry
side for a while, but not too dry. A
rest of several weeks will give the
plants a good start. Of course you will
have to keep the asparagus plants
strung up, which requires considerable
work. There must be plenty of venti-
lation in the house, and damping down
two or three times a day is advisable.

New growers sometimes have consid-
erable trouble with asparagus and also
with smilax because they do not realize
the amount of water which they re-
quire, both at their roots and in the
form of moisture in the house. They
take an entirely different atmosphere
from roses, having a fondness for
warmth and moisture. At the same
time they must have good drainage,
and if it becomes advisable to apply
a little nitrate of soda over the
benches, something which many grow-
ers like to do, the tops of the plants
should be allowed to get pretty dry
so that the fertilizer will not stick to
them. Otherwise burning will result.
The red spider gets common at this
season and can do a lot of damage to
asparagus and smilax. Moreover they
are hard to get rid of when once estab-
lished. Regular fumigation is the im-
portant thing.

Some growers do not seem to realize
the necessity of careful packing when
shipping American Beauties. All too
often boxes are opened which show
carelessness on the shipper's part.
Paper is more expensive than it ever
was before, but it should not be over-
looked. Unless it is used freely thorns
are very likely to puncture the leaves
and lessen the value of the shipment.
Ice will be needed in the boxes most
of the time from now on, but it should

never be allowed to come into contact with the buds or it may cause them to spot. Moreover the buds should not be laid too close to the end of the box, and there should always be plenty of tissue paper at their heads. They can be made fast by tying them with cord or tape. This is necessary to keep them from sliding around.

What is said about packing Beauties applies in many ways to other roses, and especially the long stemmed teas which break easily and quickly show bruises. It is a mistake to use waxed paper for lining a box, as it is too slippery. With paper prices as they are now, it is best to make as much use as possible of newspapers, except for a little manilla paper around the flower heads.

The insistent demand for ventilation at this season sometimes leads inexperienced growers to overlook the danger from cold draughts. This danger exists with many plants, but particularly with palms like Cocos Weddelliana. Cold draughts on these plants are most disastrous. The palms like a house having a night temperature from 65 to 70, but on sunny days it may run up to 78 or 80. If possible they should have a house to themselves where the air can be kept filled with moisture. They are not the easiest of plants to handle, and unless watered intelligently soon begin to show yellow foliage and stop growing. Once checked it is very hard to get them growing again.

This is a good time for the florists to get into touch with the nurserymen, for there are few florists so situated that they cannot sell a considerable amount of nursery stock in the spring. They will spend a lot of time perhaps nursing along Moonflowers, Cobaea scandens, and similar plants, while they might just as well sell hardy climbers and make more profit. Moreover, what is left can be planted out. The list includes clematis, bittersweet, honeysuckles, and the Akebia vine, which while not well known by the public in general, is an excellent vine and one to be recommended.

When writing to advertisers kindly mention HORTICULTURE

THE EASTER TRADE.

It Was Very Satisfactory in All Sections.

It was a splendid Easter. Reports from all sections show that florists are well satisfied with the business which they did. The only exceptions come in some of the smaller towns where it was difficult to get the prices charged for lilies. In the Boston market every lily was cleaned out. As a matter of fact, there appeared to be more lilies on the market in the final round-up than were supposed to be grown in New England. It is hard to tell just where they all came from, but even as it was, the market ran rather short. Most of the flowers sold readily, too.

It was the same in New York. The offerings were rather more than expected, if anything, but there was no difficulty in getting rid of all the stock. The open air flower markets established by the city apparently did not harm the stores in any way. As a matter of fact, many people who went to these markets expecting to buy lilies cheap were disappointed by the prices charged.

George Watson sends us a very favorable account of the Easter business in Philadelphia. He says:

The fine weather most of the week was a great help in making Easter week in Philadelphia a good one and it certainly was a good one indeed according to all reports very very good. Two of the high spots in this fine showing were topped by the two highest prices among the floral favorites namely American Beauty roses and Cattleya orchids. Thursday and Friday there were not near enough to go around as the out of town demand was especially brisk. The people in the cities of the Southern states seem to be all millionaires these days as the run was particularly heavy on the highest priced flowers.

Saturday was different. There were enough Beauties for all demands. Other roses were fine and cleaned up well. So did carnations and sweet peas. The latter have fallen off a bit in quality from the top notch of a couple of weeks ago but they sold well for all that and everything found a ready market from the highest grade to the lowest.

There were quantities of Southern daffodils that were also very much appreciated by the street multitudes who all wanted an Easter posy of some kind. And the home conservatory product in the daffodil line like Emperor, Empress, Horsfieldi, etc., did not suffer at all from this competition but easily found ready sale at six and eight.

We noticed some good sized lots of

color white flowers, but they can be
cleaned easily by dipping them in
cold water. Arsenate of lead discolors
foliage and flowers too much, but it
is effective.

cut lilies on sale this (Monday) morn-
ing but we are told the only reason
they did not sell Saturday was because
they were not open enough then.

The plant men also report a good
trade—most of them stating that they
had a great many more orders than
they could fill. So we can all make a
graceful and happy bow to a good old
fashion Easter. The war is over and
Queen Flora's herself again.

BOSTON.

Bids will close next week for constructing a greenhouse at Franklin Park, for the Park and Recreation Department. It is estimated that the building will cost about \$60,000. Plans are by Haven & Hoyt, New York and Chicago, as well as Boston contractors are among the bidders for the work.

Martin E. Tuohy, the So. Boston florist, has the deep sympathy of a wide circle of friends in the loss of his wife, Mrs. Alice B. Tuohy.

The florist store which has been conducted for some months in the Little Building under the name of Hamlin, Florist, but really controlled by H. H. Rogers, has been closed and probably will not be reopened. Mr. Rogers has made an assignment for the benefit of his creditors and it is understood will go into some other line of work. This store was fitted up elaborately but business did not come along fast enough to warrant its operation.

The business of William H. Elliott, of Brighton, Mass., has been incorporated under the name of W. H. Elliott & Sons Co. The officers are as follows: President, George T. Elliott; secretary, John F. Elliott, and treasurer, W. H. Elliott, Jr. These officers and Marjorie K. Elliott and A. R. Hutson form the board of directors. The capitalization is for \$300,000.

At the next meeting of the Gardeners' & Florists' Club, at Horticultural Hall, April 20, the speaker will be secretary W. N. Craig and his subject will be "Some Seasonable Thoughts and Suggestions."

The new greenhouses to be erected by the Lord & Burnham Co., for L. D. Towle, at Newton, will include a large palm house and three wings, each a hundred feet long. Much of the space will be given to orchids. Mr. Towle has a fine collection of these plants, and his interest has been stimulated more than ever by the big Boston show.

The meeting of the Boston Florists' Association scheduled for Tuesday evening, April 6th, has been postponed until April 13th.

Petros, the Huntington avenue florist, has given up his business. It is understood that he expects to return to Greece.

The American Greenhouse Mfg. Co. has prepared a new industrial film entitled "Wonderland under Glass." It was recently shown to the florists in Chicago, and doubtless will be used by the trade in other cities. A lecture is given at the same time to explain the pictures.

RAMBLING OBSERVATIONS OF A ROVING GARDENER

The Japanese Witchhazels have not bloomed so early in the Arnold Arboretum this year as in some past seasons. Probably one could hardly expect them to equal their customary records for early flowering in a season like this. In any event, comparatively few people could have enjoyed their novel beauty, although to tell the truth, the Arboretum has been a favorite place this winter for young people to try out their skis and snow shoes.

It would be well if the winter-blooming witchhazels were better known. They make excellent subjects for town gardens and are not at all difficult to handle. By growing several different species a long season can be enjoyed, too. Of course the common witchhazel blooming late in the fall is well known, but the American species, *Hamamelis vernalis*, from southern Missouri and Arkansas, and the Chinese and Japanese witchhazels are strangers to a majority of people. The Asiatic witchhazels are capable of adding much to the interest of northern gardens in winter, for they are bright and cheerful.

The flowers of the Chinese species, *Hamamelis mollis*, are larger and of a brighter yellow than the flowers of any other witchhazel, which promises to make them the best of all for general cultivation. Moreover it's a good hardy shrub, grows rapidly, and begins to flower when only a few feet high.

I learn that Prof. E. H. Wilson, assistant director of the Arnold Arboretum, is now preparing for another lengthy trip. He has completed much of his work in cataloguing the specimens which he brought back from Korea and Formosa, having confined himself very closely to this task. He will leave Boston in July, and will be away for two years in all, going entirely around the world. He will visit India, Ceylon, Australia, New Zealand, and various other countries, in search of new plants for testing out in the Arboretum. While he has gained most of his fame because of his plant explorations in China, Japan and Korea, it is expected that he will add to his laurels as a result of his visit to these other countries.

When it comes to a thorough easy-chair enjoyment of a catalogue, the latest production from Mr. Edward

Gillett, of Southwick, Mass., is the one to choose. I don't believe another catalogue published has so wide and fine a collection of unusual and interesting pictures. All cuts are from photographs and include large numbers of wild plants seldom seen illustrated, at least in so attractive a way. Moreover there are a few pictures, like that of *Lobelia cardinalis* growing beside a waterfall, and *Onoclea Struthiopteris* at the edge of a wood, which are handsome enough to frame. Another remarkable picture is one showing the ground covered thickly with the Walking-leaf fern, *Camptosorus rhizophyllus*. As a matter of fact this picture has been adopted for the covers, and the effect produced is most unusual. The catalogue doesn't depend wholly upon its illustrations for its interest, however, as the text is put up in the most readable way and there are excellent lists of plants for rock gardens, ground covers, etc.

Another catalogue in which illustrations play a prominent part is that of A. N. Pierson, of Cromwell, Ct. A new note has been introduced in this catalogue in the shape of an entire page given up to photographs made on the estate of William E. Davis, Jr., of New Haven, Ct., an estate which although in a thickly settled part of the town contains a wonderful Alpine garden, eight different views of which are shown on the page in question. There are a few pictures in colors, the one of the new rambler rose, Elizabeth Ziegler, being especially attractive. Mr. Pierson is featuring American roses, giving over a page to Mrs. John Cook, which he calls a giant American garden rose and recommends for general out-door planting. He also speaks very highly of Mrs. Charles J. Bell, which he introduced two years ago and which is numbered among the progeny of Radiance.

I never could understand why so many catalogue makers drifted along with the same phrases year after year, apparently making little attempt to keep their catalogues up to date. I am reminded of this now because as I look through the catalogue of one well known concern I find Dorothy Perkins still catalogued as a new climbing rose. In other catalogues I have found plants which have been out for many years still marked as among the new things or the novelties. It seems to me that

this is little less than a stupid mistake, for even the veriest tyro gets acquainted with these things after a while.

For a clean cut catalogue that doesn't depend upon illustrations and yet which is valuable as a reference book, it is hard to beat that of the Elm City Nursery Co., of New Haven, Ct. The type is large and readable and the titles are so arranged that the eye can follow them readily. In each case, too, the common name and the botanical name are given, which is often a great help. In many cases, too, explanatory remarks are made, as for example, the reference to *Fagus sylvatica*, where a paragraph states: "This is the Beech famous in England, where many avenues planted centuries ago and now objects of veneration." I am glad to find that in this catalogue are listed many of the plants which are considered by amateurs difficult to get, including for example, *Acanthopanax ricinifolium*, *Cercidiphyllum japonicum*, *Abies homolepis* and the Japanese Witchhazel. Altogether this is a very helpful catalogue for both the amateur and the professional.

I am interested to note that the January number of the Bulletin of Peony News, issued by the American Peony Society, is given over entirely to a sketch of the late George Hollis, of South Weymouth, Mass., and a discussion of the many peony varieties which he originated and put on the market. The name of Hollis has long been a prominent one in the peony world, and this account of Mr. Hollis's work will be read and appreciated by large numbers of people. For many years Mr. Hollis was a member of the Massachusetts Horticultural Society and a constant exhibitor, receiving many medals and other prizes. According to a sketch in the Bulletin, his aim with peonies was to obtain color, form and fragrance. His crosses were the result of hand fertilization, the doubles being selected in most cases. In order to secure a sturdy stalk for the flower, only those plants with a strong, robust habit were crossed. The seeds were gathered as soon as ripe and sown in boxes, then placed in cold frames covered with sash, and this covered with heavy burlap. This treatment secured a moist atmosphere and brought the seedlings up the next season. They were usually grown in these boxes one year before planting out. In six years from 1904 onward, Mr. Hollis introduced eighty varieties. If one-tenth of them gain a permanent place in our gardens, he will have contributed enough to ensure him an enduring name in the early history of the peony in America.

George Watson's Corner

"You in your small corner and me in mine."

The Michell seed store had a flower show all its own for three days before Easter—Tuesday, Wednesday and Thursday. A fine display it was, indeed, and pleased immense crowds of delighted patrons. Hyacinths, tulips, daffodils, Easter and calla lilies, freesias, azaleas, hydrangeas, genistas and other seasonable flowers were there in all their glory—some for prizes, and others for their decorative and educational value. Much of the stock was sent in from prominent private estates in the neighborhood. Joseph Hurley contributed a splendid lot well grown stock from the Jeffords place at Glen Riddle; and there were also fine lots by David Aiken of the McFadden estate at Rosemont, and Axel Lindroth of the Ellis establishment at Bryn Mawr. William Kleinheinz and Andrew McNaughton acted as judges in the classes where prizes were awarded.

When the growers are charging the retail stores 25c for Easter lilies wholesale and the department stores are advertising the same in the daily papers at 23 and 25c retail is it any wonder the public gets the impression that the flower stores are profiteers when they ask 30 or 35c retail. And at the same time the retailers are being asked to put up their good money to help create a demand—a demand which is taken away from them as soon as it is created. What the growers do is sell all they can, first to the retailers at high prices, and then if they have any left, dump them on the department stores at any old price, who in turn advertise them at a price which the retailer is unable to meet. There may be no law against such a thing, but it looks like a criminal offense just the same, and something ought to be done about it. The club as the representative official body, representing all branches of the trade, might do a useful work by devising

some means of preventing this silly practice.

Maybe all the growers are not guilty. We asked one of our largest (Mr. A. M. Campbell) and he said "not guilty" that he had not sold one to a department store and wouldn't. But somebody must be guilty and a committee of inquiry should be formed to take the matter up and find out who the guilty ones are. Public opinion is a powerful factor and few would care to come under its odium if they were convinced they would surely be exposed for a breach of ethics. It is all very well to say "they are my lilies and I can do what I darn please with them." Quite true, but a man might use the same argument about burning down his own house. And in a settled community he would be quite likely to burn down his neighbor's at the same time. So a little prevention is in order—to ensure public safety.

Recent visitors include Mr. and Mrs. E. C. Ludwig, Pittsburgh, Pa.; Mr. and Mrs. C. M. Wagner, Cleveland, O.; George M. Geraghty, of Dunlop's, Toronto, Ont.; Charles Russell, Jones-Russell Co., Cleveland, O.; Edward Swayne, West Chester, Pa.; Edward Nedomansky, of Cookes', Washington, D. C.; Harry Heck and Fred Frank, Reading, Pa.; Fred Lautenschlager, Chicago.

PROPHETS HONORED IN THEIR OWN COUNTRY.

The South Norwalk, Ct., Sentinel makes interesting mention of the prizes won by Traendly & Schenk at the New York Show. It says:

Horticulturists in Norwalk are interested in the fact that roses grown in the Rowayton Green Houses, owned

HENRY F. MICHELL CO.
518 Market Street Philadelphia, Pa.

by Traendly & Schenk, and under the management of Charles R. Yaeger, won the capital prize of \$50 in the growers' section of the Flower Show, held in the Grand Central Palace, New York city.

Aside from the capital prize, roses from the local greenhouses won four other prizes. The prize-winning roses are known as Francis Scott Key, Ophelia Number One, Ophelia Supreme, Mock Rose, Hoosier Beauty, Russell, Columbia and Aaron Ward.

Considerable credit is reflected upon Manager Yaeger and his associates in the green houses, as they won out over competitors from the four states.

BANGOR FLORIST BRANCHING OUT.

G. S. Seavey & Son, 270 Fourteenth street, have greatly enlarged their garden and florist business and will have many thousands of plants for their trade. Last fall they erected a new greenhouse, 18 feet by 50 feet, and have it filled to overflowing with geraniums, salvias, coleus, calendula, zinnias, etc.

They have been doing a commercial business in gardening since 1916, having a very small equipment at that time. In February, 1919, they bought the Kavanah greenhouse and business, and started growing pot plants and seedlings for the florist trade. Combining these two branches they built up a large wholesale and retail business.

They expect to have 14,000 red salmon and white geraniums alone. They are greatly enlarging their supply of pot grown tomato plants and have contracted to grow thousands of early transplanted cabbage plants.

They will also operate their garden on Fourteenth street and the farm on Hammond street. They are negotiating for a Beeman tractor, which has been claimed to have scored great success in the west for market and truck gardeners.—Bangor News.

THE LANGUAGE OF NATURE

Profiteer's Wife—"Have all flowers got Latin names?"

Florist—"Yes, madam."

Profiteer's Wife—"Even the common ones?"

Florist—"Yes, madam."

Profiteer's Wife—"Isn't Nature wonderful!"—Punch.

The executive committee of the Canadian Horticulturist Association will meet in East Hamilton, Canada, April 12 and 13. This will be an important meeting and will include an address by Professor H. B. Dorner of Urbana, Ill., on educational and experimental work, and a conference in regard to the establishment of a Dominion Council of Horticulture.

LET US HAVE AN IRIS SHOW.

Is there any one who will do for the Iris what Mr. Albert C. Burrage has done for the Orchid? He converted the ugly lecture hall of the Massachusetts Horticultural Society into a beautiful tropical forest where birds were singing among the flowers. He was showing how the orchids grow, some on the earth, some hanging from trees. It was a wonderful display, from which a new Society of Orchid Growers has started. But this show can do more than that. It can act as an inspiration for other exhibits.

If we are to show the Iris as it grows in its home we would build a little thatch roofed Japanese house with the Iris growing along its ridge-pole. In front of the house we would make a pond with the Iris growing among the sedge on its border. In another corner of the hall we would show a bit of France, a gateway with the Iris growing at its top like true little patriots displaying the tricolor in lovely shades of red, white and blue.

A new society for the cultivation of the Iris has started; can they not bestir themselves and give us such a show in Horticultural Hall in June? I have heard it whispered that the trustees of the Massachusetts Horticultural Society do not always attend the shows held through the summer season. Well, they have had a good many years of seeing flowers stuck in bottles, plates of apples and of pears. They have made a wonderful display of orchids and azaleas. Turnabout is fair play. Let the exhibitors now do their part. Labor is difficult.

There is a saying that the incentive of large prizes must be given for such exhibitions. The orchid show was planned for more than a year, but is there not some Yankee in Boston who, under the inspiration of what has been done for the orchid will show how the Yankees of the Orient grow the Iris in Japan? Having made our picture with this Iris we can show on the sides of the hall the Iris which is grown in Siberia, Holland, England and Spain, with the little Alpine Iris and the dwarf species which follow it, and make our garden beautiful from early spring till midsummer dawns.

WHEN TREES AND SHRUBS BLOOM.

To give the approximate Saturdays when the various trees and shrubs are to be in blossoms a calendar has been compiled from various sources, which should prove of value to visitors to the Arnold Arboretum. The dates in the following schedule are not the earliest when a single blossom can be seen, but when they may be said to be in blossom.

Of course, the blooming of many extends over a long period, as in the case of forsythia, and the date of blooming is likely to vary several weeks in different years. The forecast for this season may be a week or more early or later than the actual date. No mention is made in the list of most of the willows and alders, as April 3 was their tentative date; likewise April 10 was mentioned for poplars in general, peach, red maple and elms. Other dates in the calendar are:

April 17—Birches, earliest magnolias (foreign), spice bush (benzoin), leatherwood (dirca), forsythia.

April 24—Earliest foreign cherries, including Sargent's (Japanese).

May 1—Shadbush, late willows, earliest lilacs, sugar maple, Norway maple, sycamore maple.

May 8—Fothergilla, cherries, pears, moosewood maple.

May 15—Apples, redbud (Judas tree), early cornels, American magnolias, most lilacs.

May 22—Horsechestnut, early thorns, later lilacs.

May 29—Earliest syringas (Philadelphus), flowering dogwood (Cornus florida), sheepberry, thorns, late lilacs.

June 5—Late cornels, laburnum, viburnums, syringas, latest lilacs, early rhododendrons.

June 12—Cone-bearers (pines, etc.), smoke tree, rhododendrons, azaleas, laurel, fringe tree, sumachs, yellowwood (Virgilia).

June 19—Locust, catalpa, late syringas, later rhododendrons.

June 26—Linden, mountain maple (ripening of shadbush and cherries).

July 3—Chestnut, late elder.

July 11 and after—Sophora, kolreuteria (bladder-nut), witch-hazel in the late fall; Japanese witch-hazel in December, or possibly not until February of next year.

Six large quarto volumes. More than 3,600 pages. 24 full page exquisite color plates. 96 beautiful full page halftones. More than 4,000 text engravings. 500 Collaborators. Approximately 4,000 genera, 20,000 species and 40,000 plant names.

THE New Standard Cyclopedia of Horticulture has been freshly written in the light of the most recent research and experience. It is the fullest, the newest, the most authoritative of all works of its kind and constitutes the most conscientious attempt that has ever been made to compress the whole story of our horticultural thought, learning and achievement into one set of books. It is both an Encyclopedia and a Manual.

A Few of the Many Important New Features

Key to Identification of Plants This is a device to enable one to find the name of a plant. The name thus found is quickly referred to under its alphabetical location, where full information will be found in regard to it.

Synopsis of Plant Kingdom This is one of the most important features of the new edition. It constitutes a general running account of the classes, orders, and groups of plants, with a brief sketch or characterization of 215 of the leading families comprising those that yield practically all the cultivated plants. These family descriptions give the botanical characters; the number of genera and species and the ranges; a list of the important genera; brief statements in regard to the useful plants; and diagrammatic illustrations.

Illustrations There are 24 colored plates; 96 full page halftones; and more than 4,000 engravings which serve as guides in the text.

The Glossary This is an analysis of all technical terms that are used in the work and in similar works. It comprises botanical and horticultural terms with brief definitions.

Translation and Pronunciation of Latin Names In Volume I is inserted a list of between 2,000 and 3,000 Latin words used as species—names of plants, giving the English equivalent or translation and the pronunciation.

Class Articles Special effort has been made to secure the best cultural advices for the plants requiring peculiar or particular handling. Here are some of the titles of these articles: Ants; Autumn Gardening; Bedding; Diseases; Drainage; Floral Designs; Formal Gardening; Hotbeds and Coldframes; Insects; Landscape Gardening; Lawn Planting; Orchards; Rock Gardening; Subtropical Gardening; Tools and Implements; Village Improvements; Window Boxes, etc.

General Index The final volume contains a complete index to the entire work, enabling the reader to locate volume and page of any subject he has in mind.

The complete set of six volumes, bound in decorated buckram, will be delivered to you for only \$6 down and \$6 a month for 6 months, until the full amount of \$42 has been paid. Cash price \$41.

Further Particulars Sent on Request

Principles and Practice of Pruning

By M. G. KAINS

Lecturer on Horticulture, Columbia University

Few practices in the handling of plants, especially fruit bearing plants, attract so much interest as do those of pruning. The methods are so varied, the results so diverse, and the opinions of growers so apparently contradictory that this subject is always one of the most interesting, and the surest to hold attention and arouse discussion.

Particularly during the last ten or fifteen years when the principles of plant physiology have been more and more satisfactorily applied to plant production and management has interest settled in pruning. During the latter half of this time also more and more investigations and tests have been conducted by experiment stations and other workers to test out methods and principles in the interest of science and for the benefit of growers. The accumulation of such new knowledge has become very considerable especially in the last few decades, but it is necessarily so scattered that very few growers have access to it, hence the demand for a book, which shall present the really important features of these investigations as well as set forth the fundamental principles based upon the laws of plant growth.

This volume is lavishly illustrated mainly by actual photographs of specimens which show good and bad practices. The author has spared neither time nor expense in gathering his photographs, each one of which tells its story.

After a few pages of introduction the author discusses Plant Physiology as related to pruning. A chapter takes up the Philosophy of Pruning, itself a very interesting subject. Then follows a classification and clear discussion of Buds, very fully illustrated from life. How Wounds Heal is an exceedingly interesting chapter, as are also those on Prevention and Repair of Mechanical Injuries, Pruning Nursery Stock, Young Trees, Mature Trees and Odd Methods of Pruning and Training, Rejuvenating Neglected Trees and Practical Tree Surgery.

Profusely illustrated. 400 pages. 5½ x 8 inches.

Cloth. Net, \$2.00.

Plant Propagation, Greenhouse and Nursery Practice

By M. G. KAINS

We have had many inquiries from time to time for a reliable and up-to-date book on plant propagation, but were always at a loss to find any publication that we could recommend. The subject has been dealt with in fragmentary manner only in books that have come to our notice. So it is well that this new work has been issued, especially as it is both comprehensive and practical, and it should meet with a ready sale among plantmen, nurserymen and gardeners. There are nineteen chapters covering in detail topics of germination and longevity of seeds, propagating by buds, layering, cuttings, grafting, etc., fruit tree stocks, scions, etc., and there are eight pages of condensed cultural instructions in tabulated form, covering annuals and perennials from seed, woody plants, evergreens, vines, bulbs and tubers, greenhouse and house plants, ferns, palms, water plants, orchids and cacti. The illustrations are numerous, comprising 213 figures and halftone plates. There are 322 pages well bound and on heavy paper, teeming with helpful information. It is a book which no cultivator can afford to do without. It is worth many times its price. Copies can be supplied from the office of HORTICULTURE at publisher's price, \$2.00.

FERNS

THE VICTORY FERN (*Nephrolepis victoria*)

We take pleasure in offering this new and valuable variety of *Nephrolepis*. It is a beautifully crested form of "Teddy, Jr." with fronds frequently subdivided on the ends, making a most unique, distinct, and desirable variety.

This fern was

AWARDED A BRONZE MEDAL

at the S. A. F. Convention at Detroit in August, 1919. The judges of the award reported as follows: "Special stress is laid on the new fern Victory, with a rapid growth and a branching at end of fronds, making it a shapely plant. It should be a commercial success, and we **RECOMMEND IT MOST HIGHLY.**"

Strong plants, 2½-inch pots, \$3.00 per dozen, \$20.00 per 100
Extra fine specimens: 6-inch, \$1.00 each; 8-inch, \$3.00; 10-inch, \$5.00; 12-inch, \$7.50.

NATIONAL PUBLICITY CAMPAIGN.

We could hardly start our column this week with a more cheering announcement than the following from the Dutch Bulb Growers' Association, Holland:

"To Mr. A. L. Miller,
President S. A. F. and O. H.,
Jamaica, N. Y.

Dear Sir:

For the Publicity Campaign
The Dutch Bulb Growers' Association of Holland have admired your efforts to 'say it with flowers' and as the Holland bulbs are part of the flowers with which to say it, we believe that we should show our sympathy with your ideas, and therefore enclose check for \$1,000 (one thousand dollars) for the National Publicity Campaign Fund as a donation to this worthy cause.

Respectfully yours,
Dutch Bulb Growers' Assn.

Our Holland friends evidently appreciate to the full the efforts we are making to promote increased sales of flowers, realizing that success in this direction means better business for them.

We are also pleased to announce the receipt of a cheque for \$400 from Bassett & Washburn, Chicago, completing their subscription of \$500 for this year.

Greater publicity than ever is being given to the Von Tilzer song "Say it with Flowers," through its adoption for reproduction as a phonograph record by the Columbia Graphophone Company. The record appears in the Columbia list for mid-April, and is now on sale in every city and town in the United States and Canada, and will soon be available throughout the civilized world. This publicity costs us absolutely nothing; in fact we are to receive a royalty on every score copy sold. The exploitation of this song has certainly proved a triumph for the publicity committee.

The May magazines which are to carry the Mother's Day advertisements will be on sale in a few days, and some of the big weeklies will carry the same advertisements about one week before the big day. Any florist who has not received a pamphlet describing the "helps" provided for securing Mother's Day business should write for one immediately, ad-

NEW YORK

addressing the request to "The Florists' Publicity Service Bureau of the S. A. F. and O. H., 431 South Dearborn street, Chicago. These helps include poster stamps, posters, folders, electrotypes and lantern slides, all calculated to produce local publicity and to link up with the campaign advertising.

The campaign is swinging along to the full extent of the funds available. What a tremendous advantage we are missing through being obliged to adopt a parsimonious course! Was ever a good movement so hampered as ours through downright niggardliness on the part of most of those whom it was promoted to assist? Instead of a drive for subscriptions we should be driven in the acceptance of them. There has been a very unreasonable amount of the "let George do it" spirit shown so far in the campaign. To think that 20,000 or more florists in this prosperous country cannot raise \$100,000 to promote benefit for themselves worth many millions of dollars, is to think wrong. It is more than possible to raise this amount, if those it is to benefit will only think the right way.

Mr. Nonsubscriber, please do not block the best game ever played in the interest of the florists' industry by withholding further your support. You owe it to yourself. You owe it to that little band of generous brother florists who have personified "George" up to this time. Think of your Holland friends. Don't be an outlaw. Show us, through your cheque, that you don't intend to be.

JOHN YOUNG, Sec.

BOSTON FLORISTS' ASSOCIATION.

The April meeting of the Boston Florists' Association was held at the City Club on Tuesday evening, April 13th, with over fifty members in attendance, and it proved to be one of the most enjoyable sessions that the association has held. Five new members were elected.

A general discussion was held concerning market conditions, wherein the salesmen very briefly stated their side.

Mr. S. A. Dawson, of the Burlington Willow Ware Co. was a guest, and spoke to the members on Cooperation. He has evidently noticed what seems to be a fact in this section—the lack of cooperation of all branches of the trade, and referred particularly to a recent visit he made to Philadelphia florists.

The members were entertained by Prof. J. Frank De Chant, of Sheldon School, who gave a most excellent talk

F. T. D. ORDERS FOR MEMORIAL DAY ABROAD

Secretary Albert Pochelon, of the Florists' Telegraph Delivery Association has received a letter from William Leighton, a florist of 36 Renfield street, Glasgow, which doubtless will be of considerable interest to florists in this country. Very likely there are many people in America who will be glad to take advantage of this Memorial Day opportunity. The letter follows:

Dear Sis:—Last year I was favored by The American Red Cross Society, in London, with an order for Laurel Wreaths for the graves of the American Soldiers and Sailors, who perished on the Island of Islay by the wrecking of the two steamers. If it were known to the members of your association that I am in a position to execute orders for Memorial Day here, it might be an inducement for them to receive orders which I would be pleased to execute.

Had time permitted I would have circularized all the members of the F. T. D. but we are at the present moment over head and ears in our Spring Seed Trade which occupies the whole of our staff. I thought that I would mention it to you, for if you can make it known, it might be to our mutual advantage.

With all good wishes and kindest regards,

Yours respectfully,

WM. LEIGHTON.

THE MARKET.

Railroad conditions, due to the strike, have played the dickens with the flower markets in most of the larger cities. In Boston, for example, it is almost impossible to make shipments so that a glut has resulted. Stock has come in readily enough by truck, but

much of it is normally moved out over the rails, for many Boston dealers ship to distant points. Although the market was good on Monday, it kept going down all through the week. Roses were down by Wednesday as low as 1½c.; carnations sold from 2c. to 6c. and everything else was down in the same proportions.

The markets in the other cities have had a similar story, although reports from Buffalo do not show as marked slumps. Carnations there are selling from 3 to 6c., sweet peas from \$1.00 to \$3.00, tulips from \$3.00 to \$5.00, and mignonette from \$3.00 to \$6.00. Violets are down as low as 75c. Pansies are in and selling for 25c. a box. This was about the run of the market in New York and Pittsburgh when reports came in, but with a downward tendency owing to conditions.

Since the 12th inst. all express shipments from Philadelphia are under embargo on account of the switchmen's strike. Outgoing cut flower orders depend at present entirely on the parcel post service. This, as a rule, has been very satisfactory but even the mails are affected and there is risk of delay which makes buyers at a distance hesitate in ordering. And, of course, affects the market locally. Business is fair but stocks accumulate as the outside demand is curtailed. The wholesale distributors are doing their utmost to cover the situation by truck, by trolley and messenger wherever possible and no stone is being left unturned to meet the emergency. It's not quite so bad as a policemen's strike and doesn't call for the militia perhaps, but it is annoying enough to the general public to almost do so. In a sense railroad men are public servants like the police and a strike among them calls for more drastic treatment than an ordinary dispute between individuals.

HORTICULTURE

Vol. XXXI

APRIL 17, 1920

No. 16

THE TALK OF THE TRADE

The J. M. Gasser Co., of Cleveland, is a thoroughly up-to-date concern, as is evidenced by its advertising methods. A few weeks ago it used the newspapers for an announcement to the effect that on Sunday the green houses would be thrown open to the public without charge. It was stated in the advertisement used that this is the only Sunday in the year when the firm kept its establishment open, but that on this occasion visitors would see the greatest display of flowers ever made in Ohio. It was announced that among the flowers on exhibition would be 150,000 roses in benches, 100,000 carnations, 50,000 Easter lilies, 25,000 narcissi, 12,000 hardy roses in pots, 4,000 hydrangeas, 4,000 orchids and other favorite flowers in profusion as well as rare African daisies, rich tropical ferns, and sweet old-fashioned mignonette.

Certainly this was a first-rate method in which to prepare the public for Easter business. A special announcement was made, though, that no flowers would be sold or orders taken during the Sunday when the conservatories were thrown open. It was purely a flower show, and a good one, but without doubt it did much to enhance the prestige of the Gassers in Cleveland.

For the past few weeks at odd times I have taken up the various types of Chrysanthemums, starting in with the exhibition and large-flowered commercial varieties, through the pompons, and now come to the singles and anemones.

I am never able to think of single chrysanthemums without having my thoughts go first of all to Mrs. W. E. Buckingham. It is early and one of the best all-around singles ever put on the market for the commercial grower, and then I think of Mrs. E. D. Godfrey, just as good in every way but a late. These are two old standbys and since their introduction we have been favored with the variety Elizabeth Firestone. It comes in between Buckingham and Godfrey and in every way is a very valuable variety. These three varieties mentioned are pink of pleasing shades and sure to be standards.

Then, if you want a later variety,

grow Margaret Waite, as you can market cut flowers of this sort in December. It is deep pink and of good habits.

For white, I don't know of any variety that will take the place of Menza. This sort is ready for the market the first part of November, but as to picking any single white for earlier or later than this time, there is nothing to compare with this sort as to quality. This also applies to the yellow Golden Menza, which has been tried and is established. Polly Duncan, a light yellow, semi-double sort, is also a good one for general use. It comes in possibly a little bit earlier than Golden Menza.

For bronze, I would pick Jane Ingalls and Wells' Excelsior. The latter is a tall growing sort, ready to cut

about November 1st, and is very good. Ramona is also a good bronze.

For a rich crimson, you won't go far wrong in growing Virginia Holden.

In the anemones, there are two very excellent yellow ones: Eugene Langaulet and Sunshine, both good. Golden Lyda Thomas is a good variety for late work, coming in after Eugene Langaulet. It is tall growing, but the flower sprays are well set up and attractive.

There are two good white anemones, namely Garza and Blanche, the latter often called an improved Garza; both are good. Emma, a pink Garza, is a good commercial sort and Izola, which is ready about Nov. 15th, is probably the best dark colored anemone on the market. Yellow Garza is similar to Garza in habit and form, and has its place in the list of anemones.

A Well Arranged Basket

It would seem that carnation men the coming season are going to be favored with the introduction of some very good varieties. Maine Sunshine has certainly showed itself to be a variety of the first class. It is true yellow, good size and form, and when seen growing compels me to think that it is a good producer and easy doer. As to keeping qualities, anyone who has followed the shows knows that it is of the best. When you think that it traveled from Bangor, Maine, to Chicago, to the Carnation Convention, and then came away with the highest award for keeping qualities, you know that it is a winner in that respect.

Then we are to have for next season White Delight, which if I am not mistaken is to be introduced jointly by C. S. Strout and William Sim. It will be interesting to note that White Delight is a stronger grower than Pink Delight, and I think I am safe in saying that this is an absolute fact. A few days ago, I saw a bench of White Delight growing at Mr. Sim's place, the cuttings of which were received on May 17, 1919. You will admit that that is very late, but on April 12, 1920, those plants stood four feet tall, are loaded with buds and flowers, and I have seen that same bench off and on since last August and can say right now that it has stepped right along every bit of the time. About twenty-five feet of this same bench of White Delight is finished out with Pink Delight planted from earlier cuttings, but benched at the same time, and White Delight is heavier and stronger in every way. The color of the foliage shows a trifle more blue, but otherwise it is a "Delight" in all characteristics.

Another thing which I think will be very pleasing to all who like Pink Delight is the fact that both Mr. Sim and Mr. Strout state that White Delight is much easier of propagation. At any rate, these two men have been very successful in the propagation of this variety this season.

I was interested to note the way Mr. Sim handles his young stock. He probably will have in his houses before planting out time one hundred thousand or more plants ready for the field. This stock is taken from the cutting bench and put into soil in the beds instead of flats or pots, and the way the stock is doing with him is certainly pleasing. Of course, he doesn't use a rich or heavy soil, but I think the particular point in favor of this method is the saving in labor, and the fact that the cuttings do so well through having cool growing conditions at the root; and if care is used

in watering, there is no reason in the world why this method should not be a success.

Mr. Robert Edgar of the Leominster Floral Co., reports a very successful season, and his Easter trade must have been decidedly pleasing to him. Mr. Edgar is a grower of good experience and has turned out a grade of stock that is marketable and in demand by store men. His location is excellent as he has a shipping territory that reaches out in all directions in a way that is sure to prove satisfactory.

I understand that Mr. Edgar is going to confine himself to the pot plant trade, and I think he is decidedly wise in expressing himself that he will hold to medium-sized plants. For instance, we all know that this year lilies with eight to ten flowers or more to the pan were slow in moving, but any quantity of plants carrying four, five or six flowers could have been handled. Mr. Edgar will eliminate the carnations which have been growing at this range of houses and is going in particularly heavy on Begonias, Cyclamen, Poinsettia, Ramblers, Hydrangeas and Lilies.

EXCHANGE RATES BOTHER FLORISTS.

Much Business Lost by American Growers Under Present Arrangement.

Canadian florists are very much concerned over the rate of exchange between Canada and United States. The contention is being made that the Dominion ought to get along without American flowers. Now in the past a great many flowers have been shipped from United States across the line, especially to Montreal and Toronto. For years Welch Bros., of Boston, shipped great quantities of roses to these cities. Roman Irwin, in New York City, is known as a Canadian shipper. About a year ago conditions made it necessary to curtail much of this trade and within the past few months shipments have been very small. This has been largely the result of the exchange rate, which for a time was up to 15. Now it is down to 9, and doubtless in time the situation will become normal again.

Nevertheless, the opportunity is being taken advantage of to build up a wall against American importations, and some very fallacious figures are being used to prop it up. For example, a Toronto newspaper recently said that cut flowers to the value of \$165,277.00 annually were taken into Canada from United States, and that as far as the import supply is concerned the

Dominion ought to be able to do without them. Now this is by no means an exact statement of fact. The amount quoted applies not only to cut flowers but to all kinds of nursery stock. As a matter of fact, the nursery stock importations made up the larger part of the importations. If Canada is to have this stock under present conditions, it must bring it in from outside. From the statements which have been made across the border, the erroneous impression has gone forth as intimated above that the figures named apply only to flowers, and it is important that this correction be made.

There are other factors, too, not commonly considered. While Canadian florists import cut flowers, Canadian growers export them. Mr. P. Welch, of Boston, who has made a careful study of this whole situation, said a few days ago that quite as many cut flowers leave Canada for the United States as go into the Dominion from this side of the border. While Boston and other eastern cities send flowers up the line, Canadian growers ship them across to Detroit and other points west.

Of course in shipping flowers out the Canadian growers get a much greater benefit than results when flowers are shipped in. Apart from the exchange rates, there is a duty on cut flowers imported into Canada and this duty has done much to curtail shipments. The suggestion has been made that the duty be taken off cut flowers, but apparently it meets with little approval. Naturally Canadian florists themselves are not united in their opinion on the matter. Some of them live in sections where they can get as many flowers as they need from Canadian growers. Others find this a very difficult matter.

Ernest S. Simmons, of Toronto, is quoted as saying that it is always unsatisfactory to buy imported flowers because they usually arrive in a soft condition and more or less bruised. This is apart from the prohibitive prices. On the other hand, W. W. Gammage, of Toronto, says that there are localities in Canada where cut flowers cannot be produced at certain seasons of the year, nor shipments of flower producing centers be successfully made at all times. Florists in such sections would find a prohibitive policy a great hardship, and at the same time this policy would not benefit home production.

George W. Garrity, of Dunlop's, Toronto, has been interviewed by the Canadian Florist and discusses the situation very intelligently as follows:

"There are cases in which it is necessary to import some varieties of flow-

ers from the United States, in view of the fact that such flowers are not grown in Canada. The people of Toronto, traveling back and forth as frequently as they do, call for and demand flowers which they have seen in either New York or Chicago, and which are not procurable in Toronto. In these cases, it is necessary to import certain flowers. As roses, carnations, and the general run of retail stock are grown here, there is no necessity for the continuance of these importations. There are cases, in which some florists cheapen stock by importing quantities, and having them billed in, we understand, at much less than the market rate. After having them passed by the Customs, they can successfully compete with the Canadian prices, making sales at almost the cost that the regular dealers have to pay for their stock.

We believe that there is sufficient stock produced in Canada to supply the demand for cut flowers. Of course, during the heavy demand occasioned by the "Flu" epidemic, flowers were very scarce, not only in Canada, but in the United States. For the general run of business, the stock produced in Canada is sufficient, and far superior to that produced in the United States.

"We do not think it would be proper to prohibit the importation of any salable article, which is necessary in Canada. If the invoices of stock were scrutinized carefully, however, it is not likely there would be much importation of any kind of flower that is grown in Canada, as it would be impossible to sell as low as the home grown with the addition of duty and war tax.

"The growers would not benefit, if they made the prices as reasonable as they are in the United States. The Canadian growers, with few exceptions, are putting such exorbitant prices on their stock, that some florists are no doubt finding it more profitable to import flowers.

It is for that reason that \$165,277.00 has been spent for flowers in the United States. Probably most of these flowers passed through Montreal and not Toronto. If the growers of Canada would make a price, that would dispose of their stock, it would stop the week-end sales at about one-quarter to one-third of the listed price, and they could dispose of all their flowers daily, and in many cases would not demoralize business."

E. J. Hayward, of Montreal, gives it as his opinion that it would be against the interests of the trade generally if an embargo were placed upon the importation of cut flowers. He says that there is not sufficient stock produced

locally to meet the demands, and that if importations were suddenly prohibited, the retailers would be affected quite appreciably. He thinks that if restrictions were enforced they might tend to force prices higher and keep the masses at certain seasons from obtaining the flowers which they want and need.

Altogether it is much a matter of location, for R. H. Wright, of Ottawa, declares emphatically that in his opinion the importation of cut flowers is not necessary, there being sufficient stock produced to meet the demand. He says that the whole business would be benefited by prohibiting imports.

Apparently the general feeling is that Canadian florists should buy as little as possible from the United States, while the exchange on Canadian currency is maintained, but that enacting drastic measures to totally prohibit importations would be a great hardship.

The Rock Flower Gardens, Inc., of Kansas City, Mo., has bought 133 acres of land near Independence, paying, it is understood, \$60,000. The corporation is a new one, capitalized for \$100,000, and is distinct from The W. L. Rock Flower Co., although Mr. Rock is chairman of the board. Wiley Pendleton, of Indiana, is the secretary and treasurer. The corporation will devote itself to the growing of flowers in the open, and expects to produce asters, gladioli, and dahlias on an enormous scale.

Michael Dobridnia is reported to have purchased the Conrad Schultz greenhouse of Franklin street, West-erly, R. I.

DEPARTMENT OF PLANT REGISTRATION.

Geranium "Betty"

Public notice is hereby given that Theodore H. Townsend, horticulturist, New York State School of Agriculture, Morrisville, Madison County, N. Y., submits for registration the new plant here mentioned.

Geranium seedling grown at Morrisville, origin unknown. Plant 12 inches in height, a strong grower and a free bloomer in the spring and summer; has a plain leaf, no zone; flowers fourteen in cluster, single, fine petals; diameter of single flower $2\frac{1}{4}$ in.; flower pink in the bud, opening to pure white, retaining this color. The flowers have red pollen. Originator notes that varieties were crossed here, including the Geranium and Pelargonium, but the varieties became mixed, and parentage lost.

The name proposed is "Betty," in honor of the deceased daughter of

ROSES

OWN ROOT

20,000 RUSSELL $2\frac{1}{2}$ inch plants from 2 and 3 Eye Cuttings.

Excellent Condition Now.
\$22.00 per 100, \$190.00 per 1000.

10,000 AMERICAN BEAUTIES, $2\frac{1}{2}$ inch.
EXTRA STRONG PLANTS.

Ready Now.

\$20.00 per 100, \$190.00 per 1000.

The above varieties are scarce; better order now.

Also 1,000 extra fine three inch CORNELIA, for immediate delivery. The lot for \$225.00. Better wire if can use.

Write for Complete List of Roses.

To comply with a new Post Office requirement, when writing to HORTICULTURE, please use the following form:

HORTICULTURE, 78 Devonshire Street, Boston 9, Mass.
The city of Boston is divided into districts, and each district is numbered. If you will observe the number allotted to HORTICULTURE, it will facilitate the delivery of mail to this office.

There is no doubt about the fact that the publicity movement among the florists is gaining rapid impetus all over the country. This relates not only to the general campaign of the S. A. F., but to the efforts of the local associations to promote the sale of flowers by advertising campaigns. Chicago florists have been the most successful apparently in working out a thoroughly scientific campaign. Moreover, the Chicago advertising could hardly be improved upon. Milwaukee has, of course, devised a publicity plan which has attracted much attention, and the benefits of which are being seen in other cities which have adopted it at least in part. While Baltimore has been a little backward, she is now speeding up and with a four thousand dollar annual fund should be able to make a good showing. Even from the Pacific coast come reports of organized efforts along the same lines. There is every reason to believe that the publicity work of the California florists will be crowned with complete success, for the members of the trade in that state are keen and alert.

There still remains much chance for greater co-operation and more carefully considered work in Boston, but the ball has been started rolling and it is sure to grow larger as it moves along the well-oiled track of publicity. Occasionally a voice is heard in opposition to the magnitude of the scheme now being carried out, but on the whole

the florists are standing behind the movement in close ranks and seem disposed to help in every way they can. This is both to the credit and the advantage of the trade at large.

We are glad to welcome back "The Southern Florist," published at Fort Worth, Texas. In 1918 the unusual conditions created by the war made it wise to suspend the paper for the time being. Conditions have improved now to such a degree that publication can be resumed, and "The Southern Florist" comes out with an excellent Easter number. With the prices of paper, printing and illustrations constantly advancing, most of the trade papers have pretty hard sledding, and we are happy to find "The Southern Florist" in a position not only to resume publication but to expand its business as well.

We wish that we had space to reproduce in HORTICULTURE all of the important and timely paper which was read by President Kohout, of the Chicago Growers' Association, at the last meeting of the Chicago Florists' Club. Because of his activity in the work of organizing the growers of Chicago, he has a right to speak with authority, and his far-sightedness and broad-minded conception of the whole problem cause his words to be given the most respectful and thoughtful attention. The Chicago growers have blazed a trail which should lead to unprecedented success and one which can be followed to advantage by growers in all other sections. The newly organized National Association of Growers offers a medium through which local associations can take advantage of what has been learned by the Chicago growers and those of other cities. Mr. Kohout in his address dwelt especially upon the advantages of organization, but did not hesitate to speak of the sneers and slanders which were not withheld on some sides at the beginning of the work. In every city where organization is perfected, a certain amount of criticism and holding back must be expected. It takes a long while for some growers to warm up to any new plan. Mr. Kohout pointed out that while a single grower can do little or nothing to improve conditions, a number of growers together can accomplish wonders. By their united strength they are able to check any abuses which may arise in the trade. Co-operation does not necessarily rule out competition, but it puts it on a friendlier and squarer basis. One paragraph in Mr. Kohout's paper deserves special reference. In it he said, "There must be something wrong when our sons refuse to follow the steps of their fathers in the growing of floral-cultural products. There must be something wrong when we attract the lowest type of labor or the overflow from other industries." This brings up one of the most pressing problems of the grower, and if a way can be evolved to meet its solution, the trade will be happy indeed.

GREENHOUSE BUILDING

Some Important Points Made by Miss Simmons of the Hitchings Co.

Miss Annie Simmons, formerly of the Boston office and now connected with the New York office of Hitchings & Co., greenhouse builders of Elizabeth, N. J., has made quite a reputation for herself as a lecturer, speaking on commercial greenhouses and greenhouse construction. She recently gave an extended talk at Bangor, Me., which was reported in one of the local papers.

Miss Simmons said that there are two vital questions to be considered in the construction of commercial greenhouses, permanency and result. Both are necessary from a financial standpoint and finance is the principal point to be considered.

First, in balancing finances against results, or in lining them up together, there should be no give or take on the part of result. One grows to get results. The results will determine the finances.

To get the best results, excluding the question of knowledge of the subject of growing, it is necessary to have a light greenhouse, well heated, and for all time a house which can be depended upon to stand the strains put upon it of wind, rain, snow, ice, the million and one things which come to test its reliability.

For substantiability one usually recommends a full iron frame greenhouse as being lightest and best, a bit more expensive in the first cost, but less expensive in up-keeps. This type of greenhouse obtains much of its splendid strength and extreme lightness from the fact that at intervals of eight feet, three inches, there are iron rafters extending in one piece from below the ground line to the ridge or ridge vents. These, of course, take care of much of the weight and relieve the sash bars, making it impossible to materially reduce the size of the latter. Cast iron sills, angle iron purlins and other special parts add to the efficiency of this type of construction.

Next comes the half-iron frame house, really almost full iron, but with some wood members taking the place of the iron ones and with the necessary size and additional columns to take care of the glass, wind or snow loads.

Look around at the successful commercial man and size up his proposition. He will, in most cases, have up-to-date greenhouses of the best type supplemented by hot beds and cold frames. He will, if he is in the right location, have an attractive show

Flowers Under Glass

Florists are showing more interest in Gardenias as evidence accumulates that they are coming back into popular favor. You should keep shifting your plants until they are in four or five-inch pots, when they will be large enough for planting out on benches. Gardenias do well in a compost consisting of fibrous loam, four parts, leaf mold and cow manure, one part each, with a little sharp sand added. They like a night temperature of 65 to 70 degrees. Many florists find that they do especially well when plunged in ashes well up to the glass rim which gives them a nice moist atmosphere.

It is time to get at the old plants of poinsettias. They have rested long enough and should now be started into growth. Shorten back the stems and repot, using as small pots as you can. Put them back on a well lighted bench and give them a night temperature of 65. Old wood cuttings will root in three or four weeks in a warm frame and can be put into three or four-inch pots. You can keep on making cuttings until August.

The Nephrolepis ferns lose none of their popularity and while there are many growers who specialize in them, even small florists like to keep a few plants coming on. You can propagate at any time from now on to July, but remember it is very important to have a bench on which the drainage is perfect. Light sandy soil is best, for in such soil the ferns will soon produce plenty of runners which will root readily and are easily lifted. In summer the ferns should be frequently sprinkled and shaded lightly.

Give your primroses plenty of ventilation. Thousands of seedlings will be started between now and the last of May, because Primroses are found to be very ready sellers. They like soil containing a good mixture of fibrous loam and well rotted cow manure and leaf mold, but not much manure will be needed. A temperature not over fifty is best for primroses. With sunshine they can run fifteen degrees higher. The sowing of primrose seed can go on until the first of May, for even at that late date planting will give you good stock by December. Get your

early primulas into the pots as quickly
as possible and shade them slightly.

When the freesias are through flow-
ering do not dry them off too quickly,
but withhold water gradually until the
tops have died down. Then the bulbs
can be shaken out and stored away
until July or August. It is worth-
while giving special attention to these
bulbs as the flowers should be in no
little demand next season.

The heavy sale of climbing roses at
Easter time will encourage the florists
to have a good stock of these plants
for next season. They can be started
now from dormant plants.

Why doesn't some grower around
Boston who has a range of glass suit-
able for the purpose go in for ferns?
I don't mean bench-grown stock, but
pot-grown; plants that will be market-
able from 4, 5½, 6 and 8-inch pots, but
above all they must be pot-grown, not
that stock that is taken from the
benches with long, straggly fronds,
then potted up and sent to the stores.
That stock isn't satisfactory; the store-
men know it, but are unable to help
themselves, as really good pot-grown
ferns are not available around New
England, at least not in any quantity.
They certainly would bring a price
that would pay for handling them, and
I believe that the grower who finishes
up a lot of ferns of the quality men-
tioned is going to be satisfied with re-
sults.

Florists growing *Odontoglossums* are
approaching the most difficult season
of the year for these plants, for their
native haunts seldom find a tempera-
ture running over 65 degrees. The one
safe plan is to move them before the
nights get very warm to a house which
has a northern exposure and where
there are shades about twenty inches
above the glass. Shades of this sort
will admit air in abundance and yet
help to keep the house cool. *Odonto-*
glossums need careful syringing as
well as plenty of ventilation. The
Crispum section also likes plenty of
water at the roots but the Grande sec-
tion is better when allowed to dry out
occasionally.

SOLVING GROWERS' PROBLEMS

Mr. Kohout Talks About the Work of the Growers' Association in Chicago.

At the last meeting of the Chicago Florists' Club, Mr. Joseph Kohout, president of the Commercial Flower Growers of Chicago, read a paper which aroused much interest because of its frank, intelligent discussion of growers' difficulties and growers' problems. A few important extracts from the paper are given below:

The strength of our organization is what makes our organization something more than a name. Organization today is the product of modern business enterprise. Competition may be the life of trade but co-operation is creeping in by competitive business becoming organized. As growers our organization has a distinct purpose, so we look kindly to practical reforms as are adaptable to our needs. We avoid a selfish purpose in always having in mind the welfare of all those engaged in the industry. The leadership of any organization should be devoid of any control or influence of the stronger members over the weak. Organization of growers wherever they may be should tend to protect capital investment, stabilize prices as much as possible, improve labor conditions and restrain wasteful competition. Improved production, improved marketing and fair profits fairly represents the wishes of our organization. To obtain these desires we hope to obtain the favorable viewpoints of the commission wholesaler, the retail florists and the public at large. The grower is the backbone of the flower business yet we have trusted a larger part of our interests to somebody else. There is the commission man who always derives his profits from the work of the grower—there is the retailer who derives his profits in adding his cost of selling to his purchase price while the grower takes his chances on a possible profit of the unregulated law of supply and demand, hence he now comes in on creating a demand for his products that will lead to a profit over the annual average cost of greenhouse production. Some day I hope to see a maximum selling price around the holidays because of the extra demand and a minimum price on an overabundance whether because of heavy production or a small demand. In either case we should establish an equilibrium or a law of average to safeguard a margin of profit to continued successful flower production.

"Stock dumped has cost us millions

of dollars and finally we believe we have the plan in grasping the value of advertising to reduce such losses. The supply in excess of the demand starts unstable and erratic prices before the public, while the demand in excess of the supply has a tendency to make prices more uniform before the public. If the retailer can be brought to harmonize his selling prices to his pur-

chase price on an established basis, selling on a minimum and maximum price, such regulation might reduce the waste in the sales and distribution of the growers' products. The National organization could well branch out as a result of our success in Chicago, since Chicago's geographical position lends an influence to support the activities of a resident organizer, so as to

further effect state or sectional organizations among the growers.

Our plan of organizations adopted along National lines will bring to other growers the remarkable progress we have made within a year's time. Our preliminary experience is available to growers surrounding other centers of distribution. After these various organizations have been perfected, one section of the county will learn from the other. It is surprising how the Chicago growers overcome trade jealousies and suspicion and get together toward friendly co-operation.

On a national basis our organization will co-operate with the scientific and theoretical experimental work in floriculture. We can deal safely with positive results and leave the experimental stations do the experimenting.

A national organization can give us an exchange of the best cultural methods, knowledge of the best markets, supply the different local organization with instructors and organizers for every prospective and permanent organization.

As our industry advances we become individually more ready to surmount difficulties and make our profession in keeping with the most advanced methods in practice in other industries. Our national organization will stand out like the rock of Gibraltar to husband our resources to meet any emergency.

THE CLEVELAND CONVENTION

Plans Being Perfected for a Big Gathering in the Ninth Garage

It has been definitely settled that the annual convention and trade exhibition of the S. A. F. August 17, 18 and 19th, next, shall be held in the Ninth Garage, St. Clair avenue and East 6th street, Cleveland.

The building is of fireproof reinforced concrete and steel construction, equipped with a modern sprinkler system. A whole floor of the immense building has been leased, which allows of about 20,000 sq. ft. of space being available for the trade exhibition. The sessions of the convention will be held on the same floor, in quarters partitioned off from the rest of the floor, but light and cheerful, and having entry from the exhibition floor. There is every convenience for a gathering of this kind, and the convention and exhibition will be most comfortably housed.

The location of the Ninth Garage is immediately adjacent to the very heart of the downtown business, shopping,

financial, office and amusement district of Cleveland. It is just across the street from the new three million dollar Convention Hall. It is one block from the City Hall, two blocks from the post office, three blocks from the public square, two blocks from Euclid avenue, and one block from the Hollenden Hotel. The transportation lines of the city, railroads, interurban and street cars, centre in and around Public Square. Visitors journeying to the convention in their own automobiles, can store their cars in the Convention Building.

Plans of the Trade Exhibition floor, showing the different blocks of space available for exhibits, will be issued about the middle of April, and the secretary will be pleased to mail one, with regulations governing exhibits and blank forms of contracts, to anybody making request for same. The rate for space is 60c (sixty cents) per square foot. The selling of merchandise by persons or firms not having engaged space will not be allowed, unless such person or firm shall have secured a permit or license from the Secretary, the fee for which is twenty dollars.

The exhibition classes will be as follows: Plants, cut blooms, boilers and heating apparatus, greenhouse structures, florists' supplies, including fancy pottery, bulbs, seeds and garden requisites, miscellaneous. Judges of trade exhibits will be appointed by President Miller in advance of the Convention, who will examine all exhibits and make detailed reports on them in the afternoon of the opening day. Exhibitors showing novelties, or improved devices which they wish to have examined by the judges for special notice, or award, are required to make an itemized entry of them in advance. For exhibits deemed worthy, diplomas in three grades are granted, as follows: Certificate of Merit, Honorable Mention, Highly Commended.

NEW ENGLAND.

A new concern to handle ferns has been organized at Adams, Mass. It will be known as Robert Groves, Inc., and the incorporators are Robert Groves, Blanche Groves, Thomas Groves, William Baker and William Paro, all of Adams. The capital stock of the concern is given as \$75,000.

RAMBLING OBSERVATIONS OF A ROVING GARDENER

It seems to me no better plan could be devised to interest amateurs in the growing of flowers than for garden clubs to throw open their meetings and have talks given by experienced men who can make practical demonstrations of what they are talking about. At a recent meeting of the Rochester, N. Y. Rose Society, Arthur Scheonfelder talked on rose culture, and to illustrate his points used actual rose bushes which he trimmed and pruned. At a recent club meeting in Boston Mr. Letson of Carbone's gave a demonstration of arranging cut flowers, which was very instructive and helpful. This is a line of work which may be developed to a much greater extent.

Certainly we must take off our hats to some of the Englishmen when it comes to getting out elaborately illustrated catalogues. United States edition of the wholesale seed catalogue of Kelway & Sons is just at hand, and is far ahead of any American catalogue that I have seen as regards prodigality in the use of illustrations. If cuts cost as much proportionately across the water as they do here, the investment represented by this catalogue must be a heavy one. The pictures, however, are an extremely valuable part of the catalogues as they make it possible for buyers to know just what they are getting, so far at least as appearance is concerned, and as for quality, there is never any question about Kelway seeds. The cut of Kelway's New Crested Frost-proof Borecole is a gem. The plant illustrated might easily be mistaken for a pendant of a necklace. The beans and the cabbages are given much attention and beautifully illustrated, but for that matter, so are the flowers, a picture of the perennial Gaillardia being especially fine, so that the book is uniformly good throughout.

It is in this country, though, that color has been used to greatest advantage by nurserymen. I am reminded of this fact by another little brochure which has come in from Hicks Nur-

series. It deals mostly with the lesser known shrubs, a fact which I am very glad to mention, because buyers often find it difficult to locate certain plants which they have read about and wish to obtain. Among the most charming colored illustrations in the little book is one of *Enkianthus campanulatus*. This is a shrub which has won much admiration in the Arnold Arboretum, and is worthy of wide planting. Its fall color as well as its unusual flowers make it very desirable, and they flourish with the same care that Azaleas require. I notice that in the Garden Magazine the Hicks people are featuring the Japanese Turquoise Berry, without giving the botanical name. The plant described is really *Symplocos paniculata*. Its light blue berries, borne, in late summer, are really very ornamental. Unfortunately the birds like them all too well and sometimes strip a plant in a few hours. There is an excellent colored illustration of the fruit in the Hicks catalogue. In several other instances fruit instead of flowers has been chosen for the pictures, and we are shown the berries in color of *Photina villosa*, *Viburnum Seiboldii*, and *Cotoneaster divaricata*.

I have also been interested in the catalogue issued by Moon's Nurseries of Morrisville, Pa. It is well known Mr. Moon is president of the National Nurserymen's Association, and one of the most active nurserymen in the country in putting the business on a more stable basis than in the past. As is to be expected, he gets out advertising matter which is quite different from the old fashioned catalogue. The attractively bound little book at hand is entitled, "On Beautifying the Home Grounds" and contains many hints and illustrations which will be of great value to home makers.

As a matter of fact there is a general and commendable inclination on the part of several prominent nurserymen to get away from the conventional type of literature. As a result, some of them have produced catalogues which are fully as valuable to the planter as many of the books which sell for a dollar or two in the stores. Take, for example, the literature of the Framingham Nurseries, Framingham, Mass. Mr. Wyman, the energetic young man who is at the head of the concern, gets out a catalogue which contains an amazing amount of information ar-

anged for ready reference and quick absorption.

Reference should be made also to the catalogue of the Little Tree Farms, with headquarters at 6 Beacon street, Boston. So completely are these catalogues illustrated and so definite and valuable the information given, that they have been adopted by schools and other institutions for regular use.

THE ROCK GARDENS

It seems as if the exhibition of rock gardens in Horticultural Hall in May might open a world of new botanical interest to many of us, for we have done so little with mosses and lichens. We exhibit each year the edible and poisonous mushrooms. But I recall with delight the scarlet tops to some of the soft gray mosses, the wiry stems of some of the green mosses which we would twist into fairy chains when children by pulling off the tiny caps at the ends of the stems, then bringing the ends towards the roots back into the empty sockets.

The space of these gardens, two and a half feet by three may be too small to show the beautiful and varied color of our New England rocks, yet the polished pebbles of our beaches could be used with advantage.

Gold fish are ruled out, as although they have lived through the winters in our ponds, they are not native to New England. But if anyone wishes to add animal life to the interest of his garden he could make a pool and introduce a tiny turtle, or the tadpoles and frogs.

Yet I believe that one of the chief beauties of these gardens will be in the variety of native ferns which may be used. There will be violets and other flowers to give color to the gardens with the bright red berries of the partridge-vine or mitchella, which stay under the brown leaves of our forests through the winter, to brighten it all.

Then there will be the fun of seeing how beautiful we can make these gardens with the rocks, flowers and ferns which we find growing in New England.

M. R. Case.

Hillcrest, Weston.

April 6, 1920.

The Massachusetts Horticultural Society and the Horticultural Society of New York together with the New York Florists' Club, will soon hold a meeting at the American Museum of Natural History, New York City, to protest against Quarantine No. 33.

George Watson's Corner

"You in your small corner and me
in mine."

Edward C. Dungan of the Wm. Henry Maule Co. who has been confined to his home for the past four months got back to business on the 6th inst. and was met with beaming spring greetings from his associates—also a rosy offering from Queen Flora gracing his desk and shedding fragrance and good wishes all around. We are glad to hear the news, and extend our best wishes.

The Lutheran Church of Wyndmoor took fire during the night recently, and raised a great commotion among the families of the Burtons and other florists of that neighborhood. Fortunately no lives were lost but John Burton got a blistered hand while spraying the home of his daughter which stands next to the church. All got out in safety—mostly in their pajamas—and the fire companies from Chestnut Hill, Flourtown, etc., finally came along, so the danger was past; but there certainly was great excitement while it lasted.

John Kuhn went to the Frankford Hospital March 31 for an operation for rupture. He was reported to be doing well April 7 the stitches having been removed on that date, and no unfavorable symptoms having developed. If all goes well he expects to be back home at Olney in about three weeks. In the meantime his business is being conducted by his son and other members of the family. He has our best wishes for quick and speedy recovery.

JOHN WATSON SPEAKS

John Watson, Secretary of the American Association of Nurserymen, addressed the convention of the Agricultural Editors' Association in Chicago, April 6, on "Keeping the Boys on the Farm by Making Rural Homes Attractive." Mr. Watson told of the educational publicity work being done by the Association and outlined the standardization program under way. It is significant that the activities of the Association should have attracted attention that brought an invitation to have the Association's Secretary take part in the program of a convention of Editors of Farm Papers.

CHICAGO FLORIST'S CLUB.

The program arranged for the last meeting April 8, brought out a very enthusiastic attendance, but considering the elegant program which was provided, combined with the untiring efforts put forth by the officers of this organization, the number present should have been by far greater and those who failed to attend may well have reasons to regret it.

The following candidates were elected to membership: Charles M. McCauley, Grower, Geneva, Illinois; Wm. Langhout, Seedsman, 172 North Wabash avenue, Chicago; Lorenz P. Geiger, Plantsman, 4905 Quincy street, Chicago; Edward Clody, Retail Florist, 3912 North Clark street, Chicago; Geo. Wienhoeber, Retail Florist, 41 South Wabash avenue, Chicago; A. Hall, Retail Florists, 4700 Sheridan road, Chicago; H. E. Bruns, Retail Florist, 3040 West Madison street, Chicago; Fred Stielow, Grower, Niles Center, Illinois; C. Clemensen, Retail Florist, 7801 Exchange avenue, Chicago; Nick Damm, Jr., Grower, Morton Grove, Illinois; James R. Paul, Landscape Gardener, 1112 Lawrence avenue, Chicago; Ernst Weiss, Grower, Elmhurst, Illinois.

Nominations for membership were as follows: Eric Paselk, Office Manager; Poehlmann Bros. Co., Morton Grove, Illinois; L. A. Woodward, Sales Engineer, Lord & Burnham Co., Chicago.

Chairman French announced on behalf of the Good-of-the Club Committee that they have made plans to hold a May Dance and Ladies' Night some time during the month of May. There will be dancing and entertainment. In the meantime, further announcement will be coming through the Trade Press.

CASTORLAND

NEW YORK

honored the club with his presence, bringing with him a cut bloom of his new red rose—a red sport of Columbia—which first set in appearance in 1918. Mr. Hill responded with an interesting and witty speech. Many favorable comments were registered in favor of the new red rose and it was a treat to see and hear about Hill's new Red Columbia which is considered a winner.

Joseph Kohout, President of the Commercial Flower Growers of Chicago, presented a very remarkable message on the promotion of the growers' interests. A rising vote of thanks was extended to Mr. Kohout.

Chairman Morton reported the completion of all arrangements for an active campaign to encourage more home gardening.

Printed material will be ready for

mailing second week in April. The club members will be placed on the mailing list so they too will receive the literature.

Our Treasurer, Paul E. Weiss, who is also closely identified with the coal business, has given us some pertinent facts relating to the coal industry.

The special attraction of the evening was the presentation of the two reel cinema "Wonderland under Glass" by the American Greenhouse Company of Chicago. This interesting and instructive movie was shown here for the first time in this country. The audience was more than delighted—it was a wonderful picture.

Many types of greenhouses were reproduced on the screen including exterior and interior views of large and small commercial establishments and finally the reel was completed showing an actual scene in a modern retail flower store with greenhouses attached

to same. The reel at its final turn announced the national slogan "Say it with Flowers".

A rising vote of thanks was extended to the American Greenhouse Company. Owing to the small attendance, Mr. P. L. McKee, president was requested to allow the Chicago Florists' Club to again present "Wonderland under Glass" at our May meeting and he kindly consented to do so. Tickets free of cost will be issued for this occasion. Please make reservation immediately.

President Waters announced that the Elks' National Convention will be held in Chicago July 5 to 10 and it is estimated that this convention will bring over a quarter of a million visitors to our city. The Elks are planning to furnish 5,000 to 10,000 corsage bouquets during their convention and growers, as well as retailers, therefore should prepare for this occasion. Mr. Waters also reminded us that the National Republican Convention which is also to be held in Chicago in June should stimulate an enormous demand for flowers and as a reminder it is well that our growers and retailers make preparations early.

The next regular meeting of the Chicago Florists' Club takes place Thursday, May 6th, at the Randolph Hotel at 8 p. m.

F. LAUTENSCHLAGER, Secy.
Secretary.

GENERAL NEWS NOTES.

The next outdoor show of the Portland, Oregon, Rose Society will be held June 21-23. A large exhibit will be staged.

The Amawalk Nursery, of Eddyville, N. C., have reorganized, and are now capitalized at \$140,000.

John W. Baker Nursery Co., Higginson, Ark., have recently acquired 110 acres of land south of Searcy, and will establish a complete modern nursery. J. V. Smith, Sherman, Tex., will have charge of the planting. The officers of the company are John W. Baker, president; C. E. Yingling, vice-president; R. E. Baker, secretary-treasurer.

THE ROSE ANNUAL FOR 1920.

It Contains a Feast of Information for
Every Grower of Roses.

In giving to the rose enthusiasts of this country such a book as the American Rose Annual for 1920, the American Rose Society is doing a great service. And certainly the editor, Mr. J. Horace McFarland is deserving all the kind things which are being said about him in connection with this volume. Perhaps it would not be right to say that this issue is better than that of any previous year, but it covers a somewhat wider latitude, and should interest every rose grower, whether commercial or amateur.

A new feature is a collection of interesting rose notes, one of them being accompanied by an illustration which shows a charming plan for covering a four-post arch with the hybrid rugosa Conrad Ferdinand Meyer.

Special attention is given to the climbing roses, a fact that is justified by the great interest being shown in these roses at the present time and the attention which is being given them by such expert hybridizers as George C. Thomas, Jr., and Dr. W. Van Fleet. Incidentally it may be said that the Annual contains a remarkably good full page cut of the latter.

Dr. Van Fleet's rose breeding notes will be read with the keenest interest by all who have followed his work.

Rose growers have been right in expecting much from Mr. Thomas, and his article will meet their expectations. It has to do largely with the production of a hardy ever-blooming climber, the kind of rose for which a great army of amateurs have been waiting.

The book contains several splendid illustrations of Mr. Thomas' rose, several of them in color. The illustration of the Dr. Huey rose is especially fine.

Articles of special importance to those who grow roses in a large way are those of William P. Bentz on "A Five-Years' Experience with Old Roots vs. Budded Roses," Jesse A. Currey's "New Roses Scientifically Tested," and C. J. Weigel's "A Serious Menace to Greenhouse Roses."

There is a list of new roses in Great Britain as well as of American roses, with more or less full descriptions, as well as much other exceedingly valuable and important information. Altogether this year's Annual is one which no rose grower can afford to miss.

PLANTING DAHLIAS

Many make an error when they plant their dahlias, which effects their entire results.

Many plant too many tubers in a hill, with the result that they receive several stalks, a surplus of foliage, and a few flowers. One tuber is sufficient, two a great plenty, and more than that number a detriment.

Another mistake many have made, is that they stand the tuber on its end, thinking by so doing they are helping it to come through the ground, by getting the sprout near the top of the surface, while in reality they are doing the plant harm.

Tubers should be laid flat down, between five and seven inches deep, with sprout or eye facing upward. The new tubers which form, when planted in this manner will form sufficiently deep and receive plenty of moisture, while, if they were planted with the tuber standing on its end, the new tubers would form near the top of the ground, and the plant would become stunted, or would not be able to give best results, which would show in lack of blossoms.

J. K. ALEXANDER

NEW BOOKS

Landscape Architecture, by Henry Vincent Hubbard and Theodora Kimball, Harvard University Press, Cambridge. Price \$1.50 postpaid.

Henry Vincent Hubbard, Assistant Professor of Landscape Architecture at Harvard University, and Theodora Kimball, Librarian of the School of Landscape Architecture at the same institution, have collaborated in producing a volume which although bound in paper should be of enduring value. The rapid growth of landscape architecture has made very desirable a general scheme of classification, and the one which has been worked out at Harvard is the first of the kind to be presented between covers. It can be used by practitioners, librarians and students.

Every Reader of "Horticulture" Needs
DR. L. H. BAILEY'S BRAND NEW
Standard Cyclopedia of Horticulture

Large quarto volumes. More than 3,000 pages. 24 full page exquisite color plates. 96 beautiful full page halftones. More than 4,000 text engravings. 500 Collaborators. Approximately 4,000 genera, 20,000 species and 40,000 plant names.

THE New Standard Cyclopedia of Horticulture has been freshly written in the light of the most recent research and experience. It is the fullest, the newest, the most authoritative of all works of its kind and constitutes the most conscientious attempt that has ever been made to compress the whole story of our horticultural thought, learning and achievement into one set of books. It is both an Encyclopedia and a Manual.

A Few of the Many Important New Features

Key to Identification of Plants This is a device to enable one to find the name of a plant. The name thus found is quickly referred to under its alphabetical location, where full information will be found in regard to it.

Synopsis of Plant Kingdom This is one of the most important features of the new edition. It constitutes a general running account of the classes, orders, and groups of plants, with a brief sketch or characterization of 216 of the leading families comprising those that yield practically all the cultivated plants. These family descriptions give the botanical characters; the number of genera and species and the ranges; a list of the important genera; brief statements in regard to the useful plants; and diagrammatic illustrations.

Illustrations There are 24 colored plates; 96 full page halftones; and more than 4,000 engravings which serve as guides in the text.

The Glossary This is an analysis of all technical terms that are used in the work and in similar works. It comprises botanical and horticultural terms with brief definitions.

Translation and Pronunciation of Latin Names In Volume I is inserted a list of between 2,000 and 3,000 Latin words used as species-names of plants, giving the English equivalent or translation and the pronunciation.

Class Articles Special effort has been made to secure the best cultural advices for the plants requiring peculiar or particular handling. Here are some of the titles of these articles: Ants; Autumn Gardening; Bedding; Diseases; Drainage; Floral Designs; Formal Gardening; Hotbeds and Coldframes; Insects; Landscape Gardening; Lawn Planting; Orchards; Rock Gardening; Subtropical Gardening; Tools and Implements; Village Improvements; Window Boxes, etc.

General Index The final volume contains a complete index to the entire work, enabling the reader to locate volume and page of any subject he has in mind.

The complete set of six volumes, bound in decorated buckram, will be delivered to you for only \$6 down and \$6 a month for 6 months, until the full amount of \$12 has been paid. Cash price \$41.

Principles and Practice of Pruning

By M. G. KAINS

Lecturer on Horticulture, Columbia University

Few practices in the handling of plants, especially fruit bearing plants, attract so much interest as do those of pruning. The methods are so varied, the results so diverse, and the opinions of growers so apparently contradictory that this subject is always one of the most interesting, and the surest to hold attention and arouse discussion.

Particularly during the last ten or fifteen years when the principles of plant physiology have been more and more satisfactorily applied to plant production and management has interest settled in pruning. During the latter half of this time also more and more investigations and tests have been conducted by experiment stations and other workers to test out methods and principles in the interest of science and for the benefit of growers. The accumulation of such new knowledge has become very considerable especially in the last decade, but it is necessarily so scattered that very few growers have access to it, hence the demand for a book, which shall present the really important features of these investigations as well as set forth the fundamental principles based upon the laws of plant growth.

This volume is lavishly illustrated mainly by actual photographs of specimens which show good and bad practices. The author has spared neither time nor expense in gathering his photographs, each one of which tells its story.

After a few pages of introduction the author discusses Plant Physiology as related to pruning. A chapter takes up the Philosophy of Pruning, itself a very interesting subject. Then follows a classification and clear discussion of Buds, very fully illustrated from life. How Wounds Heal is an exceedingly interesting chapter, as are also those on Prevention and Repair of Mechanical Injuries, Pruning Nursery Stock, Young Trees, Mature Trees and Odd Methods of Pruning and Training, Rejuvenating Neglected Trees and Practical Tree Surgery.

Profusely illustrated. 400 pages. 5½ x 8 inches.

Cloth. Net, \$2.00.

Plant Propagation, Greenhouse and Nursery Practice

By M. G. KAINS

We have had many inquiries from time to time for a reliable and up-to-date book on plant propagation, but were always at a loss to find any publication that we could recommend. The subject has been dealt with in fragmentary manner only in books that have come to our notice. So it is well that this new work has been issued, especially as it is both comprehensive and practical, and it should meet with a ready sale among plantmen, nurserymen and gardeners. There are nineteen chapters covering in detail topics of germination and longevity of seeds, propagating by buds, layering, cuttings, grafting, etc., fruit tree stocks, scions, etc., and there are eight pages of condensed cultural instructions in tabulated form, covering annuals and perennials from seed, woody plants, evergreens, vines, bulbs and tubers, greenhouse and house plants, ferns, palms, water plants, orchids and cacti. The illustrations are numerous, comprising 213 figures and halftone plates. There are 322 pages well bound and on heavy paper, teeming with helpful information. It is a book which no cultivator can afford to do without. It is worth many times its price. Copies can be supplied from the office of HORTICULTURE at publisher's price, \$2.00.

FERNS

THE VICTORY FERN (*Nephrolepis victoria*)

We take pleasure in offering this new and valuable variety of *Nephrolepis*. It is a beautifully crested form of "Teddy, Jr." with fronds frequently subdivided on the ends, making a most unique, distinct, and desirable variety.

This fern was

AWARDED A BRONZE MEDAL

at the S. A. F. Convention at Detroit in August, 1919. The judges of the award reported as follows: "Special stress is laid on the new fern Victory, with a rapid growth and a branching at end of fronds, making it a shapely plant. It should be a commercial success, and we **RECOMMEND IT MOST HIGHLY.**"

Strong plants, 2½-inch pots.....\$3.00 per dozen, \$20.00 per 100

NATIONAL PUBLICITY CAMPAIGN.

A second time within a week or two we are pleased to note the progressiveness of Michigan florists. Albert G. Boehringer, treasurer of the Saginaw-Bay City Floricultural Society, writes: "The Saginaw-Bay City Floricultural Society, by a resolution, instructs me to write a cheque for \$25.00 and mail it to you as our subscription to the National Publicity Campaign for this year."

Doubtless, there are many other trade organizations in the country which could follow the example set by the two Michigan bodies.

The Slogan Billboard.

It is a splendid time now to install one of the "Say it with Flowers" billboards. Many a florist's establishment furnishes an ideal location for a board, and it might also serve to hide in a way an unsightly shed or outbuilding. These billboards are very attractive, painted in the official colors, and serve their purpose admirably. They are supplied at actual quantity cost, \$50 each, delivered—and are worth this amount for the material in them. A large number of these boards are now complete, and ready for immediate shipment. The Cleveland Florists' Club recently ordered 20 billboards, and they were shipped on the day the order was received. Many other clubs could use a similar quantity. It would be a great thing for our campaign if 500 of these signs distributed throughout the country were flashing to a million or more people daily our message, "Say it with Flowers."

Change of Quarters for Our Administration Offices.

Owing to lack of sufficient space for the requirements of our Administration Offices, the Society has taken larger quarters in the old Siegel-Cooper Building, 41-43 West 18th street, New York, and the offices will be located there on and after April 25. In the same building will be a concentration of wholesale florist interests, a concentration which has been the dream for years of many in the trade. Visitors to New York, who look over this new market—and, of course, all will do so—are cordially invited to call at our offices on the mezzanine floor. All the facilities of the offices are at their disposal, and mail and telegrams may be addressed there at any time. Our members will be made to

feel quite at home, as, indeed, they should be.

Mother's Day.

Any florist who has not received a broadside descriptive of the publicity helps for Mother's Day business should write for one to the Florists' Publicity Service Bureau of the S. A. F. and O. H., 431 South Dearborn street, Chicago.

The Campaign Fund.

As far as can be learned, the florists throughout the country did an unusually large Easter business, resulting in greater profits to the trade. It might be expected that many of those who have not yet contributed to the Campaign Fund would now come across with the subscription so long anticipated from them. But it looks as though we may go on expecting. Expectancy is a bad habit. For years and years the florists have made expectancy the basis of operations. Now when we have an active movement to turn expectancy into actuality, most of those who are to benefit seem unwilling to support the fund that is making the change. They are not helping to help themselves. Our committee cannot pay our publicity bills with expectations. Why not help them toward materialization—send a cheque right away for any amount circumstances will permit, and it will be found to be a mighty good investment.

New Subscriptions.

The following subscriptions have been received and are in addition to those previously announced, annually for four years, unless otherwise stated:

THE AMERICAN DAHLIA SOCIETY TRIAL GARDEN.

The trial garden of the American Dahlia Society will be conducted at the Connecticut Agricultural College, Storrs, Conn., in charge of Professor George W. Fraser again this season.

Dahlias will be entered by the raiser or introducer and the tubers may be sent by mail to Storrs, Conn., or by express to Williamantic, Conn., prepaid, until June 1. Plants up to June 25. The clumps will be returned at the end of the season if desired. Tubers and plants will be properly planted and taken care of throughout the season. The name of the raiser and introducer posted on the stake.

Many visitors from New York, Boston, and other points were at the garden last year making notes, and the attendance this year will probably be larger than ever.

A charge of \$1 is made for each variety entered. Not more than three tubers or plants of any one variety can be accepted. Flowers scoring 85 will be awarded the Society's certificate of merit, and the flowers exhibited at the Annual Dahlia Show of the Society.

All correspondence in reference to the trial garden should be addressed to Professor George W. Fraser, Storrs, Conn.

Barnard S. Myers, manager of the W. J. Palmer & Son greenhouses at Lancaster, N. Y., recently bought a greenhouse plant at Dansville and expected to go there. He had intended to go there, but has been induced to remain with the Palmer Co. The Dansville house will therefore be conducted by Mr. Myers' son, Leo. A. Myers, and the firm will be known as the B. S. Myers Floral Co.

NEW YORK FLORISTS CLUB.

President A. M. Henshaw has appointed C. H. Totty, W. H. Duckham, W. R. Pierson, A. L. Miller, Max Schling, F. H. Traendly, John Young, A. M. Henshaw as the Flower Show Committee. This committee will co-operate with a similar committee appointed by the Horticultural Society of New York and when this joint committee is organized will have full power to arrange for the Eighth International Flower Show to be held in the spring of 1921 and to carry out all details in connection with same.

JOHN YOUNG, Sec.

BOSTON.

Thomas F. Galvin, who has been seriously ill, is now on the high road to recovery. He was operated on at the Desprisy hospital in Brookline. Probably he will spend a few weeks at the seashore before resuming business.

The Boston Transcript publishes a very pleasant notice about Wax Bros in connection with their new location. It reads as follows:

"Wax Brothers, the florists, have taken a long lease of the entire building at 44 and 46 Temple place, to which they moved on March 1. Wax Brothers were formerly at 143 Tremont street. They started in the florist business thirty years ago at 20½ Temple place, known at that time as 'The Hole in the Wall,' where they had a space of 200 square feet. Business increased and in 1895 they were forced to move into larger quarters, occupying 600 square feet at 143 Tremont street. From there they moved to their present location, 44 Temple place, now occupying 2,000 square feet of floor space.

PERFUME IN PEONIES.

I think that some of the peony specialists are paying increased attention to the question of perfume in their favorite flowers, and I know that dahlia growers have often talked about the desirability of getting dahlias if possible which have a pleasant odor. In looking through the novel catalogue issued by Julius Roehrs Co., of Rutherford, N. J., under the title of The Ten-Ten, that ten annuals have been selected especially for fragrance. The list recommended includes Heliotrope, Mignonette, Stocks, Sand Verbena, annual Wallflower, Sweet Sultan, Evening Primrose, Cleome and Nicotiana. I am sure that many amateurs will be glad of a list of this character, although I seriously question the advisability of including Cleome, the giant Spiderplant. I consider this an excellent subject for garden use, especially for filling vacancies in hardy borders, but I have never considered its perfume at all pleasant. On the contrary, it has seemed at times rather objectionable, although it is not pungent enough to be noticeable far from the flowers. The old-fashioned lemon verbenas are an excellent plant not only for amateur but also for commercial growers. I know of one woman raising flowers for market who often includes the foliage in bouquets with very satisfactory results.

Although doubtfully hardy in the very north, *Deutzia gracilis* has come to be an exceedingly popular shrub in the United States; but the comments on its handling made by a writer in *Gardening Illustrated* might well be taken to heart here. The writer says that he has seldom found this *Deutzia* pruned in the right way, usually being dealt with too severely. E. F.

No. 17

THE TALK OF THE TRADE

Mr. B. F. Letson, of Carbone's Flower Store in Boston, is making quite a reputation by his talks on artistic flower arrangement, in the course of which he illustrates the principles which he sets forth. Not long ago he talked at the home of Mrs. Robert F. Clark, in Boston, for the New England Branch of the Women's National Farm and Garden Association, and on April 14, he gave another demonstration lecture for the New York members of the association at the home of Mrs. J. W. Lancashire, New York City. Mr. Letson shows how to effectively arrange different varieties of flowers in holders of various kinds, and also gives demonstrations of first aid to wilted flowers. This is a good way for a florist to get his business advertised, and especially if he deals in pottery and vases of many kinds, as does Carbone. It seems as though it might be an excellent plan for the Florists' Association of Boston or the Gardeners' and Florists' Club to get Mr. Letson to give his lecture for them, possibly making it an open meeting and inviting the public. In this way all of the florists would be benefited. It is a matter of congratulation to find women's clubs and other organizations taking sufficient interest in flowers and flower arrangement to employ lecturers to give them the benefit of their skill and experience.

According to a Hartford, Conn., paper, Joseph McManus, of the firm of Spear & McManus, florists, has acquired the property at 240-242 Asylum street, the transaction involving, it is said, \$100,000. It is understood that the building is to be remodeled to meet the growing business of Spear & McManus, and that a conservatory is to be established on the second floor. Mr. McManus, in charge of the business, says that his shop is to be made one of the most attractive and best appointed in New England.

The extensive business being done by florists in all lines of the trade has

greatly increased the orders for supplies of many kinds. This applies even to thread, and the John C. Meyer Thread Co., of Lowell, Mass., has been having a big trade. The Meyer Green Florists' Threads have become an institution among the florists, having been used for at least 50 years. This is a concern which has always lived up to its reputation for making thread of full length and full strength, for which reason this thread is known to the trade the country over. The John C. Meyer Thread Works is a very busy place just at this time.

Everybody doing a bedding plant business must at this time have on his mind the matter of Geraniums. As was predicted repeatedly since last fall, Geraniums are in short supply, and from present indications the retail price will run close to 35c. each for well grown 4-inch stock. Four-inch plants are selling at an average of 20c. each, and there are not too many around. The one variety which is in heaviest supply is S. A. Nutt, but there is no doubt that every one offered will be picked up quickly. Poitevine

and Ricard are very short, and 2½-inch stock now, even if it is late, is very good value as they can be worked into 3½-inch pots for early June and bring just as much as some of the early 4-inch stock.

Speaking of bedding plants, it is only fair to say that all stock in that line is moving well. There is a big demand and the indications point to a spring business never before equalled. Fuchsias, Petunias, Heliotrope, Salvia, Ageratum and stock of this character is in fair supply and looking around at the different ranges of glass, particularly those who do their own retail business, I find excellent quality. Of course everybody is planning on a good Memorial Day trade, and I hope that the expectations of all are realized. There is a mighty fine lot of cut flowers that will be available for that day. Indoor Gladioli will be coming along nicely at that time, and the retailers are all well pleased that they can figure on Lilies this season, something that was sadly missed last year. Ten weeks' stocks, Candytuft and Feverfew are also planted in large quantities, and while there will by no means be an oversupply, I feel sure

Good Example of Flower Arrangement

that there will be a liberal quantity offered and taken up at good prices.

It isn't too early to be thinking about Christmas plants, and I have noticed one plant in particular that is surely going to be in short supply for this coming Christmas; that is the Begonias, such as Cincinnati and Melior. Stock in 2½-inch size for June 1st delivery is hard to find. The price is high and every grower who has any stock at all will do well to keep it coming along in as good condition as possible and propagate from the tops as soon as this can be done without injuring the stock.

As to Cyclamen, I think there will be a normal quantity. There is a lot of excellently grown early stock, and there probably is no plant that is more generally useful and satisfactory than the Cyclamen for holiday trade.

I understand that Mr. Strout's new yellow Carnation, Maine Sunshine, has had a wonderful advance sale, and Mr. Strout is making all preparations for the introduction of this Carnation the coming season. Everyone knows that whatever he does is done well, so we feel sure of getting good stock and in good time of delivery. I understand that Mr. Strout is building a new house to assist him in disseminating Maine Sunshine.

There is no question that this is a grand Carnation. It is a true yellow, deep enough so that it shows up well even under artificial light; the habit of growth is all that can be asked for, and form, shape and keeping qualities are of the best. When I think of the different varieties of yellow we have had in the past, I can think of none that ever showed up anywhere near

to the class of Maine Sunshine, and unlike most of the yellow sorts, this variety has a good rugged constitution.

Another Carnation of promise for the coming year is Hope Henshaw, to be introduced by A. N. Pierson, Inc. If I understand correctly, stock of this variety will be somewhat limited. This is a pink, somewhat like Ward in shade, and has been tried out by several growers besides A. N. Pierson, Inc. They all report it of good habit and productiveness, and I feel sure from what I have seen of it that it is a good keeper.

It isn't too early to think of ordering new Carnations for next season. The grower who gets his order in early is going to benefit by good delivery, and the way these two varieties above mentioned are selling, it would be advisable to get orders in right away. While there will be plenty of cuttings to go around, those that are not ordered until next December or January will have to come from late lots.

THE MARKET.

This has been undoubtedly a buyers' week; in other words, stock has been so plentiful that it could be obtained at about any reasonable price. This has been the condition not only in Boston but in Philadelphia and other markets. In many cases, too, difficulties have been increased because of transportation troubles. Inability to move stock has caused an overplus of nearly everything all along the line, although this has been more noticeable perhaps in Philadelphia and New York than in Boston.

For the first three days prices were on the downward trend in most markets, but during the latter part of the week there has been a vigorous effort to stabilize conditions. In many instances growers have held back their stock in order that the market might be cleared up. On the whole, conditions are more favorable for the week to come. Actual prices are very much the same as last week, and the markets are remarkably uniform throughout the country.

Roses are quoted at from \$4 to \$20, but may be bought for less. This is also true of carnations with quotations at \$4 to \$6. Salesmen would like to get \$20 for callas but often take \$12, and while quotations for lilies are from \$15 to \$20 in Pittsburgh, it is a fact that in New York they have been selling at from \$6 to \$12. Sweet peas are fairly strong at 50c. and so are snapdragons at \$6 to \$8. Gardenias are not very plentiful, but are selling in New York at from \$4 to \$20, there

being a great difference in quality. Tulips are selling readily but not above \$6. Violets have made little progress, in fact do not sell in many places at enough to show a profit.

FLORISTS UNITE IN ACTION CLOSING SHOPS SUNDAYS.

For the first time in years, fourteen of the leading florists' shops of Washington were closed last Sunday. Realizing that the observance of Sunday as a day of rest or worship is necessary to the health of all workers, the florists last week decided to remain closed on the Sabbath in the future.

Representative florists and their employees attended services at Foundry Methodist Episcopal Church last Sunday, and a sermon on Sunday observance was preached.

William F. Gude, of the firm of Gude Brothers Co., is explaining the action of the florists, said that those in Washington feel their employees are entitled to one rest day a week.

The florists who observed the "closed" Sunday are: Z. D. Blackstone, George H. Cooke, Dupont Flower Shop, Gude Bros. Co., Stanley H. Holland, Louis E. Hoover, F. F. Leapley, Louise Flower Shop, Marche & Co., Leo Niessen Co., O. A. C. Oehmler, S. S. Pennock Co., J. H. Small & Sons and Washington Floral Co.—*Washington Post*.

ADMINISTRATION OFFICES

Society of American Florists

— and —

ORNAMENTAL HORTICULTURISTS

NOTICE OF REMOVAL

The amount of business in the administration offices has increased to such an extent that we have been compelled to seek larger quarters. We have secured offices containing about 1,600 square feet of space in the former *Siegel-Cooper Building, 41-43 West 18th Street*, and will be located there on and after APRIL 26.

The Thirty-Sixth Annual Convention and Trade Exhibition
will be held in the Ninth Garage, Cleveland, O., August 17-18-19. Floor plans and diagrams showing available trade space are now ready. This Convention and Trade Exhibition should break all records in the history of the Society. You cannot afford to miss it. Make your plans now to be present.

ARE YOU A MEMBER ?

IT SHOULD BE THE DUTY OF EVERYONE IN THE TRADE TO BE ENROLLED

At present our membership consists of 1,550 life and 1,617 annual members, a total of 3,167 of the leading progressive florists of the United States and Canada. It is expected this number will be increased to 5,000 by December 31. Five dollars will pay your dues to January 1, 1921. Fifty cents of this amount pays a year's subscription to the "Journal" of the Society. If you haven't seen this Journal send for a sample copy.

Do not delay in this important matter. Send in your check at once, and become a member of the national organization that is doing so much important work for the florists' trade in general.

THE PUBLICITY CAMPAIGN

Have you subscribed to the fund which is making this campaign productive of so much good to the florist industry? If not, why not do so at once—it would be the best investment you ever made.

The city of Boston is divided into districts, and each district is numbered. If you will observe the number allotted to HORTICULTURE, it will facilitate the delivery of mail to this office.

It is unfortunate that there seems to have been some misunderstanding about the nature and backing of the National Garden Bureau, which is being carried on under the direction of American Seed Trade Association. In a recent number of The Seed World, of Chicago, this matter is taken up in some detail. As The Seed World has been largely instrumental in promoting the bureau, it probably speaks with authority. The statement is made that erroneous reports have been circulated which would discredit the bureau or question its intimate connection with the Seed Trade Association. Of course the bureau is new, having been started only last fall, and has not yet created any great stir. It has had no such support in its publicity work as the S. A. F. or even the National Nurserymen.

At the same time many contributions have been received from large seed concerns, and during the present spring the bureau's press service has sent out numerous articles to the newspapers which are calculated to encourage garden making, the buying of seeds, and the use of seeds in such a way as to prevent waste. The articles are on such subjects as "Wrinkled Peas and Pea Wrinkles," "Growing Backyard Bermudas," "A Flower Bordered Walk," and "When the Soil is Ready to Work." It was decided to concentrate on the press service because that was the quickest way to get results. It is claimed that this service has helped to prevent a disastrous slump in garden interest, something to be deplored this year when

a shortage of farm crops will make home garden products of unusual value.

Mr. Leonard Vaughan is chairman of the National Garden Bureau, and his address is 31 West Randolph St., Chicago. The general committee consists of Mr. Vaughan, A. M. Eldridge, of the Henry Field Seed Co., Shenandoah, Ia., and David Burpee, of W. Atlee Burpee Co., Philadelphia. The next convention of the American Seed Trade Association will be held June 22-24, at the Hotel Pfister, Milwaukee, and probably this matter will receive considerable attention then.

For the past year or two the National Nurserymen's Association has been sending articles on planting and improving the home grounds to a long list of newspapers throughout the country, and has found the papers glad to use the information obtained in this way. Naturally it has helped to promote the sale of nursery stock and increase the interest of the public in the ornamentation of the home grounds. It would seem as though the ultimate of all this publicity work would be some sort of unified effort by which all of the various organizations might carry on a concerted campaign. In this way there would be no overlapping, the papers would not feel that they were being worked, and the industries concerned would be permanently benefited. Properly this work should be carried into the winter so that home makers would be informed about the best uses of cut flowers, the care of cut flowers in the home, and the growing of potted plants indoors.

Of late years Mothers' Day has not aroused much Mothers' enthusiasm in the eastern states. It seems

Day to have brought the florists considerable business in the central parts of the country and in the west, but has not had much effect on the trade in New England and along the Atlantic coast. Past experiences seem to show that the public is ready to respond to a Mothers' Day appeal, and that the sale of flowers can be greatly augmented on that day, with a little special advertising in advance. The S. A. F. is making a special effort to arouse interest in Mothers' Day this year, and it is to be hoped that the florists will give their support. It isn't so much the nature of the occasion that counts, as the fact that an opportunity is given to encourage the use of flowers for a specific purpose. It is simply forging one more link in the chain of publicity, and so helps to brighten the lives of thousands of people, as well as assisting in building up the florists trade at a season when it naturally runs rather light

Nurserymen have been having difficulties not a few the past season. Reports now coming in show that a vast amount of damage to stock in the fields was done by

mice. Thousands of trees have been girdled and ruined. In many instances the snow was so deep that the mice were able to reach the overhanging branches as well. It is reported that in some nurseries in New England and New York state nearly half the deciduous trees have been ruined. This includes ornamental and fruit trees. This is a serious matter this season when stock is short anyway. Then during the past few weeks it has been almost impossible to make shipments over a large part of the country owing to the railroad embargoes. More or less stock on the way has doubtless been ruined. In one way the lateness of the spring has been fortunate for it will prolong the planting season and probably much work can be done even yet. Altogether, though, the situation has not been one to rejoice the hearts of nurserymen.

George Watson's Corner

"You in your small corner and me
in mine."

E. Gurney Hill of Richmond, Indiana, passed through our midst on the 14th inst. on his way to Washington. He wants Uncle Sam to find out who swiped his importation of new roses at the docks in Manhattan. Lots of other things go-a-missing there besides new roses. Even bags of fancy grass seeds disappear in the most unaccountable way. As for silks and other high toned merchandise, that is an old story. A bunch of sleuths of the real Sherlock Holmes calibre seem to be badly needed these days—especially around the wharves and railroad terminals.

Miss Elsie M. Thoires, daughter of James M. Thoires, the Camden florist, was married to LeGrand Roberts on the 14th inst. at the home of her parents, Oaklyn, N. J. The groom has been a business partner of Mr. Thoires for some time past, and this closer union meets with the acclaim and good wishes of their hosts of friends.

Miss Elise G. Luck was married on the 15th inst to Charles F. Pennock oldest son of Samuel S. Pennock, the Philadelphia wholesale florist. The ceremony took place at the Calvary Episcopal church, Germantown. The groom is in the wool business, but is well known to many in the floral line. His younger brother, Samuel came down from Cornell to act as best man.

How's this for an ingenious diagnosis of the little game of hybridizing and raising new varieties as explained by a Fleur de Lis expert in the March 27 issue of the London Weekly "Gardening Illustrated."

"Iris Ciengalliti is small and dwarf, real drawbacks and I have not found its so-called neat and compact habit was dominant though frequent in the progeny. It is part of the fascination of the game that an apparently stupid parentage may upon occasion give really fine things. The crux of the matter lies in genetic selection based on what may be called experience, plus intuition and as the inheritance of gaulities in this seems to depend on the quantitative effect of duplicating and complex factors not subject to simple interpretation the formation of rules is as yet impractical"

Now you know all about it. The daddy Fleur de Lis may be a stupid idiot (apparently), but if the mammy Fleur de Lis at the other end of the pole be all right a real wonder may result. Raising new varieties of Iris must be a fascinating game and those who are intent on it are little worried by the lesser affairs of life. Maybe our illustrious friend Boies Penrose is taking a whirl at it just now, that he is keeping so quiet in his bungalow in South Broad street. At any rate he says nothing as yet as to who shall be our next president and we all want to know that. As Boies lives in the good old Quaker City where the "quantitative effect of duplicating"—from yellow dogs to gravestones—has long been a fine art, he has a big advantage over all his fellow enthusiasts. Mutualistic symbiosis is the great principle to follow, but one must have just the right quality of the intuitive faculty in his composition if he is to avoid the grave danger of antagonistic symbiosis so easily developed among extremists at both ends of the line.

DETROIT GROWERS' EFFORT FOR PUBLICITY.

Gentlemen:

The writer, on invitation, attended a "Better Business" meeting of the Detroit Florists' Club in that city on Tuesday evening at 8 p. m., at the Statler Hotel. Co-Operative Publicity and the new proposed National Growers' Association were the topics under discussion. It was a very enthusiastic meeting and every man signed up for a Co-operative Publicity fund on the percentage plan. Mr. S. V. Swenson of Chicago was also present and spoke on the Chicago plan and progress of

THE GREATEST MARKET STRAWBERRY

HOWARD'S No. 17

MORE DOLLARS—are made in growing this Wonderful Staminate Variety than any other.

YIELDS—at the rate of 15,000 quarts per acre.

PLANTS—very vigorous with perfect foliage.

BERRIES—are large, firm, very beautiful and delicious.

SEASON—very early to late.

A STRAWBERRY—without a fault, that will solve the variety question for both home use and market.

THIS ACQUISITION—was produced after thirty years of Scientific Plant Breeding, and after 25,000 Seedlings had been originated.

PRICE for 25 plants, \$1.50; 50, \$2.50; 100 \$3.50; 250, \$7.50. Postpaid.

ADDRESS the ORIGINATORS and get the genuine.

A. B. HOWARD & SON

publicity. The growers present decided to call a meeting in the near future for the purpose of organizing a Growers' Local Association.

There will also be a gathering of growers at the St. Nicholas Hotel in Springfield, Ill., on Tuesday, April 20, at 12.30 p. m. for the purpose of organizing a down-state Local Growers Association, to which all flower growers in the state outside of Chicago are invited.

We are meeting with great success everywhere, and the growers are anxious to unite for Better Business Methods.

Yours truly,

J. F. AMMANN.

Keep careful watch of all your stock in frames. Otherwise you may lose some of it. This stock will need plenty of ventilation, especially in the morning, before the weather gets warm. In the afternoon, though, it is important to shut down the frames in time to keep plenty of warm air confined in them through the night. When real warm weather comes the frames can be removed altogether.

If you have any Ericas which were not disposed of this season, you should cut them in just enough now to shape them well. Good robust Ericas can be given a pot one size larger, but any specimens which look weak are better re-potted into pots of the same size, as they will then have a better opportunity to recover their wonted vigor. Ericas like a potting soil composed of fibrous peat and loam, with one-third of silver sand. Loosen the ball of earth with a pointed stick and shake off the outer soil. Then if you find the ball which remains to be dry immerse it in a tub of water for a short time. In potting up the plants avoid getting them into the earth too deep. It's better to err on the other side if you make any mistake at all. It is important that the soil be well firmed around the roots and the drainage must be perfect. The summer treatment consists of sinking the plants out of doors into some loose material like hay or leaves up to their rims. A place which is somewhat sheltered from the hot sun is most desirable.

Regular attention must be given to bedding stock which is being propagated, either from seeds or cuttings. If you have geraniums that were shifted into four-inch pots a few weeks ago they will need spacing. Cannas in flats should be lifted and potted if the work has not been done already. A four-inch pot is large enough. Caladium esculentum will need five-inch pots. When transplanting asters from one flat to another be sure to set them down to the seed leaf and have at least an inch between them.

Orchids from now on will require shade enough to reduce the temperature and yet without excluding too much light. The Brazilian orchids like an abundance of diffused sunlight, and there is danger of giving too much

shade to the Miltonias. As one florist has well described it: "A light clouded streak over the glass is a plenty at this season." Cattleyas in flower should go into a cool, well shaded house. For them rolling lath blinds are much better than white-wash.

TREATMENT OF LILIES.

There are plenty of garden makers, and not all amateurs either, who believe that the stems of lilies should never be removed after the blooming season until the foliage has dried off. They take the grounds that the gradual ripening of the foliage is necessary to the formation of the flowers for the following season. This theory is true enough as it applies to hard bulbs, like tulips, hyacinths or narcissi, but lily bulbs are soft and entirely different in their character. The facts in the matter are set forth concisely by Mr. A. Grove in the Gardener's Chronicle, where he takes issue with another writer who has been advising his readers never to remove the top growth of Lillium auratum before it had dried. Writes Mr. Grove: "Often by accident but more often of set purpose have I broken off the stems of lilies in every stage of their development and have yet to notice any diminution in stature or wealth of bloom in the succeeding season."

He then goes on to tell of a particular plant of Lillium Hansonii which for four successive years had to submit to decapitation when less than half its normal growth had been completed. In the fifth year it was allowed to grow unchecked, and signalized the occasion by flowering more profusely than ever before. Then in finishing his argument he writes:

"There are probably few growers of lilies who at one time or another have not had to regret the loss of a fine lily stem, felled by a marauding slug, chopped up to make a succulent salad for hare or coney, or broken off short by some canine friend in pursuit of an alien cat, but the only result will have been to add to the vigor of the bulb."

When writing to advertisers kindly mention HORTICULTURE

WINDOW DISPLAYS AT NIGHT.

Lighting Which Gives the Best Effects to Attract Trade.

City florists have an excellent opportunity to obtain considerable good advertising by means of well lighted windows. This matter is discussed very intelligently and at considerable length by Robert Falconer in The Seed World. In part he says:

"The sales value of show windows is usually greatest at night. This is the case because at night people have more leisure. They have the time to stop and look at the window. In addition, the streets are comparatively dark and there are not so many other things to attract their attention. If the windows are well lighted, the attention is concentrated upon the display.

"The prime essential of window selling is good lighting. Unless the windows are well lighted at night, and sometimes even in the daytime, people will not be able to see the display distinctly. Now, good window lighting is exactly the same as good stage lighting. The window that has a complete lighting system has all the different lighting units that are used on the stage. To have a lighting outfit that will make possible the displays that will always attract attention and result in the maximum number of sales, the average sized window must have the following lights: There must be lights at the front top of the window which serve the same purpose as the drop lights in the theatre. It must have lights along the floor of the window close up to the window glass which should be installed much after the manner of and will serve the same purpose as the footlights in the theatre. In addition, there should be a couple of spotlights.

"Stores today have failed to realize the full value and the real economy of spotlights. The spotlights should be located in the front corners of the windows and at a height a little distance above the level of the heads of the people looking into the window. If they are located too high, the best results cannot be secured, and if they are located too low, they will attract too much attention themselves. Each of these sets of lights should be equipped with color screens of different colors.

Method of Installation.

"One row of ceiling lights is all that is necessary. They should be equipped with reflectors or troughs that will throw the light upon the front of the display and should be hidden from view of the people in the street by means of a valance or a painted sign across the top of the window glass. If the ceiling is higher than the top

of the window, some light will be saved by installing the row of lights at the top of the window sash. Provision should be made on the troughs or the reflectors for attaching color screens in order that the desired color of light can be obtained.

"The floor lights may be installed in much the same manner, except that the tops of the troughs or the reflectors

tors should not extend above the lower edge of the window. Provision should be made here also for the attaching of color screens. The spotlights should also be equipped with color screens. The most suitable screens for such lights are rotating disks fitted around the edge with transparent disks of different colors, and it may be wise to have these color disks geared to tiny motors which may be used to revolve the disks slowly, thus continually changing the colors and causing these changing colors to play in rainbow fashion upon the part of the display in the spotlight.

"Let us now look into some of the advantages of this complete system. The combination of ceiling and floor lights not only makes it possible to light the whole window display uniformly, but to do so with less expenditure for electric current. The closer the lights are to the thing to be lighted, the less light will be required. The floor lights are always much closer to the display than the ceiling lights, hence not only better lighting results, but less electric current is required.

Value of Colors

"The color screens serve to bring out the good features of the goods displayed in a manner that they could not be brought out without the use of color screens. Color screens also make it easy to secure the best possible results from anything else displayed in the window. The time is most certainly coming when retailers will no more think of trying to light their windows and not use color screens than they would of lighting the windows with candles.

"The spotlights may be used for many different purposes. One way in which they can be used is to feature some leader in the window. If something special is placed in the center of the window, the rest of the lights turned out or only left burning to light the window dimly and the spotlights are played upon this feature, anyone who has ever been to the theatre knows how this feature will stand out and how it will attract attention even from the other side of the street. The spotlights will bring many a person over to the window who would have passed by without noticing it had it not been for the spotlights. Two spotlights should almost always be used, because when all the light comes from one direction, the object will not be as well lighted as it is when the light comes from two different directions. In some cases, however, it may be an advantage to have the light all come from one direction in order that sharp shadows may be cast for the sake of contrast."

GARDENERS' & FLORISTS' CLUB OF BOSTON.

The regular monthly meeting was held in Horticultural Hall on Tuesday evening, April 20th, with a moderate attendance. Three new members were elected.

The Club voted to hold their annual picnic in Cunningham Park, East Milton, about the usual time in July.

A collection of tulips by Walter H. Golby was awarded honorable mention.

The speaker of the evening was W. N. Craig, secretary, and his subject, "Seasonable Thoughts and Suggestions," proved most interesting and brought forth considerable discussion.

PRUNING.

The pruning of shrubs is really understood much better than that of pruning the climbing vines of different kinds. Knowledge is especially lacking among gardeners about the proper care of the several varieties of clematis, and a writer in Gardening Illustrated points out that different methods are required for different va-

rieties. The proper pruning is described as follows:

"In the case of Clematis montana, which flowers in spring on the shoots of the preceding year, any necessary pruning should be done directly the flowers are over. Clematis William Kennett flowers on the shoots of the same year, hence any pruning required may be done in early spring, before growth recommences. Clematis Jackmani may, if necessary, be cut back hard to quite plump buds in early spring." The same writer says, "Wistaria sinensis can be pruned during the summer. When the young shoots have made their growth, they may be pinched back to within two or three eyes of the base, in order to encourage the formation of flowering spurs." All the above plants will be benefited by a good watering occasionally, especially the first summer after planting.

RAMBLING OBSERVATIONS OF A ROVING GARDENER

I am interested to see that Harlan P. Kelsey, of Salem, is putting out the beautiful Fraser fir, *Abies Fraseri*. This is a remarkably handsome tree from the highest peak of the Carolina mountains, and one which has shown itself well adapted for lawn specimens or for screens. Its leaves are dark green on the upper surface and blue underneath. The foliage is thick set and as the tree has a compact pyramidal habit, its general appearance is unusually trim and symmetrical. The fact is not always realized that the fir balsam, *Abies balsamea*, while a good looking tree as it grows in its native wilds in the central part of Maine, is almost worthless as a specimen tree in other parts of the country. It is certain to become leggy in a very short time, and seldom lives long. For that reason it is not worth the attention of nurserymen or planters.

Yet a good fir is a tree to be welcomed, and *Abies Fraseri* seems to meet the general requirements of garden work surprisingly well. Moreover, it seems perfectly at home in the south, thriving there in sections where few similar evergreens are at all successful. I know of only one other fir which can be recommended as highly for use in the eastern part of the United States, and that is the Japanese fir called *Abies homolepis* or *brachyphylla*. This Japanese, purple-coned tree is a gem, and its behavior in the Arnold Arboretum warrants its planting with perfect confidence anywhere in New England. It is pleasant to find that we are gradually getting together even a small collection of evergreens which are really worth giving a place on our larger estates.

Mr. Kelsey is also featuring the Carolina hemlock, *Tsuga carolinianum*, another native American evergreen of undoubted hardiness and many merits. It is a tree of which Professor Sargent says in a bulletin of the Arnold Arboretum: "The handsomest of the hemlocks which can be grown in Massachusetts and now one of the most beautiful trees in the Arboretum is a native of the South Appalachian mountains, *Tsuga carolinianum*." Mr. Kelsey calls it the queen of American evergreens, and I think perhaps he is justified in giving it that appellation, for its dense, dark foliage, semi-pendulous branches and general form give it unusual charm.

Mr. Kelsey gives it one specially good recommendation, which I presume is justified, when he says that it is much more adaptable to city atmospheres than its plainer sister, the Canadian hemlock, and that it will thrive in southern latitudes where the latter becomes thin, yellow and unsightly.

A recent number of the National Nurseryman contains a letter from Mr. Alexander MacLellan, of Newport, R. I., in which that well known gardener makes several statements which are worth passing along. Mr. MacLellan refers to a published article in regard to the Oriental Planetree and says: "It may surprise you as it did me that the Oriental Planetree has proved a failure in this section, both as a street tree and for any other purpose when submitted to a weather test such as was experienced in the winter of 1917-18. Whole rows of them were split open—the result being a dying back of the tops in the summer of 1918. In fact, some of the trees were killed back to the ground." Mr. MacLellan then goes on to say that maples in variety showed no ill effects under the same conditions, but then continues: "Sugar maples, it should

be said, do not do well planted near the ocean. Inland, nothing finer can be seen. A few miles is sufficient to make the difference between success and failure." Mr. MacLellan recommends the Norway maple for street planting in Newport, and says it is much to be preferred to the silver maple, which is good in its way only for immediate effects. The sycamore maple he calls good for temporary work, but says that they grow coarse with age.

I wonder if nursery men as a rule give as much attention as they should to the question of scent in flowers. The question has been taken up by an English trade paper, which thinks that nurserymen and seedsmen miss what would be a strong pull with many buyers because they neglect to dwell upon garden plants which appeal to the olfactory organs. The writer goes on to say: "Our carnation men might give more prominence to the matter of perfume than they do. The same remark applies to other things. The delicious scent of the Prince of Austria tulip and a few other sorts is often passed over, and in peonies some are highly favored with perfume while others are almost nasty." Tulips as a rule are not thought of as flowers of fragrance. Indeed a certain unpleasant odor has sometimes been quoted as detrimental to them. Years ago, for example, when the tulip craze was on in England and threatened the

Good Specimen of *Abies Fraseri*

supremacy of the rose as a national flower, an eminent divine wrote a strong philippic in which he said: "There is a flower, a tulip, which has engrafted the love and affection of most people into it. And what is a tulip? A well complexioned stench, an ill odor wrapped up in pleasant colors." Yet some of the modern Darwin tulips have a fragrance which is most wholesome and delicious. Probably the growers of olden days had nothing of the kind. The fact isn't always realized that some of the narcissi also have a delightful scent. One of them, known as White Lily, is especially notable in this respect, having a perfume which reminds one of the tuberose. Ordinarily plants which have passed maturity cease to have a pleasant perfume, but the English writer already quoted observes that this is far from being true in the case of the little tree known as Bird Cherry, *Cerasus padus*. He says that the dying leaves of this tree give off a most delicious fragrance which he often stops to inhale.

FLOWER SHOW OF THE AMERICAN DAHLIA SOCIETY.

A meeting of the Executive Committee of the American Dahlia Society was held Monday, April 12, at the Pennsylvania Hotel, New York, for the purpose of taking up the business of the Autumn Flower Show.

Notwithstanding the fact that the railroad strike was at its height at that time, there were present: Richard Vincent, Jr., White Marsh, Maryland; George L. Stillman, Westerly, R. I.; F. Louis Alling, West Haven, Conn.; I. S. Hendrickson, Flowerfield, N. Y.; William Noonan, Locust Valley, N. Y.; James Duthie, Oyster Bay, N. Y.; I. N. Failor, Richmond Hill, N. Y.; and E. C. Vick.

George W. Kerr, Doylestown, Pa., was expected to attend; he was ready and at the station, but was unable to get a train to New York.

Prof. George W. Fraser, of the Connecticut Agricultural College, was unable to leave the college at this time.

The fully attended meeting under the adverse circumstances shows the spirit of the committee.

It was decided that there would be three classes of exhibitors, namely, Commercial Growers, those who grow tubers for sale; Private Growers, those who employ gardeners, but do not sell stock, and Amateurs, those who grow their own plants, individually, except the work of plowing or spading and handling the fertilizer, who grow dahlias for their own pleasure and not for sale.

The Dahlia Show will be held Sep-

tember 27, 28 and 29, at the Pennsylvania Hotel, New York.

The exhibits of amateurs shall be admitted free.

Garden clubs will be limited to 100 square feet at a flat rate of \$10.

Competitive exhibits may be displayed in the trade space, so that exhibitors who enter flowers for display only and also flowers in competition can keep all their exhibits together to make the best possible general display.

The price of trade space to be \$1 per square foot. Admission 50 cents. Trade tickets will be sold at \$25 per hundred. Unused tickets will not be redeemed.

Each exhibitor shall have three season tickets.

A Schedule Committee was appointed consisting of James Duthie, F. Louis Alling, I. S. Hendrickson and William Noonan, with the suggestion that the schedule be prepared as soon as possible to include dahlias, in the various classes, also other autumn flowers, fruits and vegetables.

The following trade space was taken at the meeting:

I. N. Failor, Richmond Hill, N. Y., 50 square feet; John Lewis Childs, Flowerfield, N. Y., 150 square feet; F. Louis Alling, West Haven, Conn., 100 square feet; Geo. L. Stillman, Westerly, R. I., 100 square feet; William Noonan, Locust Valley, N. Y., 50 square feet; Richard Vincent, Jr., White Marsh, Md., 100 square feet.

As there is about 2,000 square feet of trade space to be sold, it will be seen that a quarter of it has already been taken.

EDWARD C. VICK, Secretary.

THE WESTCHESTER AND FAIRFIELD (CONN.) HORTICULTURAL SOCIETY.

The regular monthly meeting of the above society was held in Greenwich, Conn., April 9. Vice-President Harry Jones occupied the chair. The feature of the evening was the presentation of the silver medal from the National Association of Gardeners to Robert Williamson for the highest number of points secured with exhibits during the past year. James Stuart gave an interesting description of the Boston Flower Show, comparing some of the exhibits with those shown at the New York International Exhibition. The general opinion of the members was that the New York show was the superior. The labor question came up for considerable discussion. It is rather humiliating to find that Italian and Polish laborers are receiving higher wages than the professional gardener. On the motion of Mr. Seeley the question of holding a summer

STRAWBERRY AND RASPBERRY PLANTS

I have been selling plants since 1870. There has been put onto the market in that time 2000 named varieties, you can count your fingers and you will have all the best ones. You will not throw my Catalogue into the waste basket after you have read it. The average strawberry yield in the U. S. A., to an acre is 2000 quarts. On page 15 I will show you how to multiply this by four. The finest berry this side of Texas, I have 500,000 Plants of the Howard 17. C. S. PRATT, Athol, Mass.

flower show was left over until our next meeting, which is on Friday evening, May 14. Prizes from the J. H. Troy and A. N. Pierson fund will be given for exhibits and a discussion on matters concerning the gardening profession will be brought up that evening. The concert and dance held at Greenwich, March 23, was a great success. Those fortunate enough to be present had a jolly good time and enjoyed themselves to the utmost.

JACK CONROY, Cor. Sec.

MORE MONEY FOR GARDENERS.

According to newspaper reports gardeners on private estates are now firmly demanding increased wages. It is stated that assistant gardeners in the cottage colony at New York, who formerly were paid \$60 a month, but who have had them advanced in many cases to \$80 a month are about to ask for a further increase to \$100 a month.

HENRY A. DREER, Seeds, Plants, Bulbs and Supplies, 714-716 Chestnut St., Philadelphia, Pa.

NASSAU COUNTY (N. Y.) HORTICULTURAL SOCIETY.

The regular monthly meeting of the Nassau County Horticultural Society was held in Pembroke Hall, Glen Cove, on Wednesday, April 14th. President Thomas Twigg occupied the chair and Joseph A. Winsocki and Robert Purcell were elected active members and six petitions for active membership were received.

Mr. Henry Gaut, James MacDonald and Joseph Adler judged the monthly exhibits and their awards were as follows: Three heads of lettuce, 1st, James McCarthy; 3 heads of cauliflower, 1st, Peter Smith; 12 mixed antirrhinum, 1st, Peter Smith. President Twigg's special table decoration brought out lots of competitors: 1st, Louis Hubbard; 2nd, Wm. Milstead; 3rd, Peter Smith. A vase of roses exhibited by George Wood received honorable mention. A letter was received from the Park Garden Club inviting the society to attend the Iris and Tulip Show to be held by them at Flushing, L. I.

Mr. Van Ginover of Holland and Mr. Sperling of New York were present and each gave a short but interesting talk. This was one of the best meetings ever held by the society, both in attendance and exhibits.

The exhibits for the May 12th meeting will be Darwin Tulips, 12 pink, 12 mauve, 12 mixed.

ARTHUR COOK, Cor. Sec'y.

William N. Crompton, for many years a prominent florist at East Greenwich, Conn., died recently at the age of 75. For many years he was gardener for Thomas P. I. Goddard at Potowomont, but later went into business for himself.

The April meeting of the Syracuse, N. Y. Rose Society features W. R. Pierson of Cromwell, Conn., as the principal speaker, his talk being on American roses.

At the last meeting of the Worcester Garden club at the home of Mrs. E. D. Thayer, Mr. E. W. Breed, the well known landscape architect, talked about perennials and shrubs suited to this climate.

THE BEST FERN TO GROW

One Writer Asserts That Adiantum
Cuneatum Has Merits That Sur-
pass Those of All the Others.

Many claim that the Fern is the most useful fern and while this may be so in some respects, it is doubtful if the Pteris family generally has ever attained to the popularity achieved, and held, by the Maidenhair Fern—Adiantum cuneatum. Grown under comparatively cool conditions, this will endure quite as much bad treatment as the majority of the Pterises, and there can be no comparison between the two when the respective value of the fronds for cutting is in question. Judged by the latter point, says a writer in Gardening Illustrated, I venture to assert that A. cuneatum is easily the most popular and the most useful of all ferns. For use in vases on the table when these receptacles are required to be covered with foliage, what is more suitable? Is a group of small plants of a light, yet attractive, nature desired, then A. cuneatum proves its value.

In plant-houses very few Ferns form such effective and graceful foils to flowering plants, and, in addition to this, a supply of fronds can be relied upon for cutting at any season of the year. There is no doubt that A. cuneatum (as well as other plants) has been brought into bad repute because plants grown for sale have been rushed along in warm and moist houses. No plant grown under such conditions will last very long when removed from such a house and placed in a window or in an unheated room. Had these plants so grown been gradually inured to a lower temperature—hardened off, in fact they would have given a much better account of themselves.

Those who may have to provide a regular supply of fronds for cutting are aware of the latter fact. Their Adiantums, therefore are raised in a comfortable and fairly moist temperature, they are afterwards removed to a cooler house, and they are by degrees accustomed to plenty of air and fully exposed to the light. Grown in such a manner, the fronds acquire a firm and wiry character, and when cut there is no question as to their lasting qualities. Adiantum cuneatum is, of course, easily increased by division, but seedlings are equally easily raised, and these can be relied upon to grow into good-sized specimens in a short time. Except where specimen plants are needed, it is more profitable to raise a batch of seedlings annually, and to dispose of superfluous plants at the end of the third season.

THE BOILER OF Unequalled Fuel Economy

Kroeschell Boilers, the best by test since 1879. Forty years' experience.

THE QUALITY PLACE OF BOSTON

Regarding the Kroeschell, it is the best we have ever had and satisfactory beyond our expectations. It heats up especially quick and has saved us considerably already in the price of fuel. When we are in need of another boiler we will give the Kroeschell the first consideration.

THE PENNSYLVANIA HORTICULTURAL SOCIETY.

The last lecture of this season's series was given on Tuesday last, by Professor A. C. Beal of Cornell University, the subject being Gladioli.

The exhibits staged at this meeting were of the usual high quality. Those deserving special mention being some specimen *Calceolaria hybrida* exhibited by Mr. A. B. Johnson, Rosemont, Pa., Wm. Comfort, gardener. These plants were in 8-inch pots, foliage standing 18 to 20 inches above the pot, the heads of the plants being about 26 inches in diameter, completely covered with well finished flowers. A collection of cut flowers of *Gerbera* hybrids (South African Daisy) was exhibited by Mrs. E. V. Morrell, Torresdale, Philadelphia, Thos. Roberts, gardener. There were 21 colors represented in this collection of flowers, the flowers ranging from 3 to 5 inches in diameter. A collection of *Antirrhinum* (Giant Flowering) was exhibited by Mr. S. T. Bodine, Villa Nova, Pa., Alex. MacLeod, gardener. The flower stems were about 4 feet tall, and the spike of flowers measuring from 18 to 24 inches.

MRS. BENJAMIN HAMMOND.

Mrs. Laura Anthony Hammond, wife of Benjamin Hammond, is dead at her home on Spy Hill, following a brief illness of pneumonia. Mrs. Hammond, about a month ago contracted a heavy cold which later developed into pneumonia. Everything possible was done for her and two nurses were in attendance and just when it was thought that she was on the road to recovery her heart gave way under the strain.

The deceased was born in New York and her early life was spent in Harrison, Westchester county. In 1898 she became the wife of Mr. Hammond and during the years of her residence here she had become prominently known and was highly esteemed by all and possessed those rare traits of character which endeared her to all who came in contact with her.

The Rafters in Heacock's House

In our last two ads. you will recall we called especial attention to the great width between the two columns in our 78 foot house. Now let's see how and what our rafters are that such a thing can be done and the house have ample strength and rigidity. From the column to the ridge we use a rafter $3\frac{1}{2}$ inches deep and $\frac{1}{2}$ inch thick, on one side of which is hot riveted a $1\frac{1}{2}$ by 1 by 3 16 inch angle.

See b and c on above illustration. This angle prevents the rafter bending or buckling sideways. Compare in your mind the amount of shade a rafter of that size casts in connection with the trussing necessary in two column houses.

From the column to a point just above the grade line we run one solid rafter and post combined. It measures 5 inches wide and $\frac{1}{2}$ inch thick. See on above cut.

Bear in mind that there are no welds or splices of the rafter with the post.

They are in one solid piece from column to the heavy cast iron post base; the latter embedded in concrete 12 inches below grade. Such a rafter and post combined needs no trussing. Every point is as strong as every other point. There are no weak spots. No spots requiring stiffening or strengthening.

Now look at that column cap and see how rugged it is. Note how its many bolts binds the rafters and column securely together. Don't lose sight of the fact that the cap is bolted through and through the column. No possibility of a slip off with that cap.

Be on the lookout for our next ad. about more of the strong points of this Samson like construction of ours and remember that we go anywhere for business, or to talk business.

FERNS

THE VICTORY FERN (*Nephrolepis victoria*)

We take pleasure in offering this new and valuable variety of *Nephrolepis*. It is a beautifully crested form of "Teddy, Jr." with fronds frequently subdivided on the ends, making a most unique, distinct, and desirable variety.

This fern was

AWARDED A BRONZE MEDAL

at the S. A. F. Convention at Detroit in August, 1919. The judges of the award reported as follows: "Special stress is laid on the new fern Victory, with a rapid growth and a branching at end of fronds, making it a shapely plant. It should be a commercial success, and we RECOMMEND IT MOST HIGHLY."

Strong plants, 2½-inch pots....\$3.00 per dozen, \$20.00 per 100
Extra fine specimens: 6-inch, \$1.00 each; 8-inch, \$3.00; 10-inch, \$5.00; 12-inch, \$7.50.

NATIONAL PUBLICITY CAMPAIGN.

To florists who wish to work up a little local publicity in a novel way, it is suggested that they take advantage of the opportunity presented in most of the larger moving picture houses, especially those making vaudeville a feature, for featuring the official "Say it with Flowers" song. Orchestra scores as well as the vocal score are available through the publishers, and the proper rendition of the song is demonstrated in the Columbia phonograph record now to be had of any Columbia dealer and which is fully endorsed by the composer. Several florists in the smaller towns have attempted this feature with great success, and with the distribution of a few flowers to an audience it is said to be "big stuff." It is well worth a trial. Incidentally, it might be said that the song, as a headline feature at the Palace Theatre, New York, and a prominent theatre in Buffalo, last week increased its standing as a popular "hit."

We are drawing very near to Mother's Day, one of the two big flower days remaining for us this season. Florists who are not using the posters and other aids for this day's publicity available at the "Florists' Publicity Service Bureau of S. A. F. and O. H., 431 So. Dearborn Street, Chicago," are making a mistake, as the day cannot possibly be over-advertised as one for gifts of flowers—and mothers, as a rule, particularly the elder ones, have many loving hearts right within their family circles willing to pay homage on this day, if they are not allowed to forget. A liberal poster display is equal to a good many finger strings for memory-jogging purposes. Again, these aids tie up very well with the magazine advertising of our Campaign.

Reference has frequently been made to the growing use of flowers as subjects for the embellishment of magazine advertisements. Who has not seen the beautiful advertisements in colors of a prominent corset manufacturer, in which flowers are made to dominate the design. "Printers' Ink Monthly," a magazine advocating art in advertising in reproducing one of these advertisements as an artistic example, says: "This company is to be congratulated on getting away from the customary display of a corseted figure, for without question this pic-

ture of the corset and its container grouped with beautifully painted flowers on the blue satin background is a decided step forward artistically." All such advertising of which this is only one of many examples, helps to keep flowers in the public mind; and, perhaps not strange to say, the innovation is synonymous with our Campaign for publicity for flowers.

Disappointment over the very lax support given to our Publicity Fund continues. A week of good response is followed by one of absolute indifference. It is truly either a feast or a famine—instead of a steady stream of contributions, as our Committee has the moral right to expect. We have never sought to criticise the amounts of contributions as they come in, but we have easily been able to distinguish those which come from the heart as well as the pocket. When a florist writes "I am enclosing to you my cheque for \$5, all I feel I can contribute at present, but I am in hopes I shall be able to send more later," we feel highly gratified. We know that man's contribution is started from two points of his make-up. We believe in him just as he believes in our Campaign. There surely must be many more such men, a little proud, perhaps, to send so small a contribution. They need not fear criticism. If our Committee could only depend upon sufficient help of this kind, its road would be easy traveling. Who will take this hint today? Let us have a good bunch of such subscriptions to report in our article next week.

Take note of the Society's new address "43 West 18th Street, New York."

JOHN YOUNG, Sec.

A BAD WINTER FOR ROSES.

According to the New York Botanical Garden officials this has been the hardest winter for roses in this section of the country for many years. While the season, as regards low temperature, did not equal the record cold of some recent winters, notably that of 1917-18, the exact peculiar combination of weather circumstances proved most unfortunate.

The loss is likely to be great in all but the hardiest varieties, but even the hardy perpetuals show signs of having suffered, although these were supposed to be as hard as nails as far as local weather conditions were concerned. Some of the trees in the park, too, have not stood the winter well. For instance, one of two Australian digger-pines, which had come safely through the very hard winter two years ago, has since died.

GARDENERS' CONFERENCE.

A gardeners' conference under the auspices of the members of the National Association of Gardeners, located in the vicinity of Boston, will be held in Boston, Thursday evening, May 6th. The early hour of the meeting, 6.30 o'clock is to enable members coming from a distance who may desire to return home the same night to do so.

The conference will be for a general discussion of subjects relating to the gardener and his profession, in which all members present will be invited to participate. This is in line with the program of the conference recently held in New York, which proved so successful and drew forth many helpful suggestions from the floor.

The general work of the gardeners' national association will be discussed, and plans of the campaign about to be launched to arouse the interest of young men in the profession of gardening, will be explained. As is now generally recognized, the difficulty of securing assistant gardeners is proving a serious factor in the operation of country estates, many of which have to be maintained with practically unskilled labor, skilled help being almost unprocureable in these times.

The association has recently added the following names to its list of sustaining members: August Busch, St. Louis, (L. P. Jensen, gardener); William Ziegler, Jr., Noroton, Conn. (A. Bieschke, gardener); James B. Duke, Somerville, N. J. (J. Dymock, gardener); H. L. Thompson, Perrysburg, O. (H. Hundt, gardener); Irene du Pont, Wilmington, Del. (J. Buckingham, gardener); W. B. Howells, Suffern, N. Y. (T. Hambleton, gardener); Mrs. David Dows, Brookville, L. I. (H. Gibson, gardener); Frank J. Dupignac, Mamaroneck, N. Y. (J. Henderson,

gardener); Harry B. Clow, Lake Forest, Ill. (J. Wilson, gardener); Daniel Guggenheim, Port Washington, L. I. (T. Leyden, gardener); Theodore F. Thieme, Fort Wayne, Ind. (W. Warburton, gardener); General Richard Coulter, Greensburg, Pa. (N. T. Forsythe, gardener); C. H. Hutchins, Shrewsbury, Mass. (W. J. Dack, gardener).

THE MARKET.

The market has remained practically stationary for the past week. It has been fairly well supplied, and if it had not been for the cloudy weather, everything would probably have been in over supply. In some places there has been a somewhat downward tendency, while in others, especially in Boston, the market has stiffened a little, due to a large demand from Salem, Mass., where a Carnation Day absorbed a large amount of flowers. Arthur Carr of the Boston market has received a few Blushing Bride Gladioli, the first of the season. Some other gladioli are beginning to come in a few at a time. In New York, Southern lilac is showing up to a limited extent.

Roses are selling in the different markets all the way from 3 to 30c.; it is impossible to give any stable prices. Carnations average about 6c., although they have sold lower in New York. Callas are bringing 8 to 16c. in New York, and are selling quite as well in other markets, but in Boston they have been pushed down by the influx of Easter lilies from growers who were not able to get their blooms in for the Easter trade. Snapdragons are going readily at from 50c. to \$1.50 a dozen. Marguerites are \$1 and \$2 and Violets remain stationary at \$1 per 100.

BOSTON.

Mr. J. G. Jack of the Arnold Arboretum began today conducting a field class at the Arnold Arboretum. The class will meet every Saturday afternoon up to June 6th. These classes have proved very popular in the past and afford an excellent opportunity to become acquainted with the trees and shrubs of New England, as well as those of foreign countries.

The next meeting of the Boston Florists' Association will be held at Westminster Hotel, Tuesday evening, May 4th. The speaker will be W. H. McMasters, who will talk on "The Wit and Humor of Flowers."

Nathan Fishelson, the florist, is a director of a new organization known as the American Fruit Growers of Palestine, Inc., which has been chartered under the laws of Massachusetts with a capital stock of \$2,000,000. The corporation aims to develop the economic resources of Palestine, but the head office will be in Boston.

The Boston office of Hitchings & Co., the greenhouse builders of Elizabeth, N. J., has been moved to larger and more convenient quarters in the Old South Building, Room 406. This company is doing a large amount of business in New England and has long needed more commodious quarters for its Boston staff.

Mr. Charles Robinson, of the Henry M. Robinson Co., has been making a trip to Montreal and other Canadian cities, combining business and pleasure.

No. 18

THE TALK OF THE TRADE

I notice that two florists around Boston are selling their rose plants direct to the public through the daily press. This is stock that has been forced in the greenhouses, but dried off sufficiently to stand moving, and these bushes sell readily at a good price and in general give very satisfactory results to the buyers. Peirce Bros. of Waltham and Wm. Elliott & Sons, Inc., of Brighton are the two firms advertising at present. They report heavy sales and the varieties they are offering are good ones for the amateur to grow out of doors. These sales are going to help those interested in roses and it will mean increased business through other channels, such as the ramblers, hybrid perpetuals—in fact, all kinds of roses.

Window boxes are an important part of many a retail florist's business, particularly those having greenhouses, and a fine trade can be worked up in this line if reasonable care is taken in filling the orders. An important point is the construction of the boxes, which must be large enough and properly taken care of in the way of drainage.

The selection of plants for window boxes must be followed out wisely, having in mind always the varieties suitable for shade if the boxes are so situated, also varieties that are best for bright sunshine if they are to be located in such a position. I certainly don't approve of using such plants as cannas and salvia in window boxes. I have seen it done, but I think they are out of place. There are plenty of other suitable plants such as geraniums, which of course come first. Chate-

laine and Mrs. Patten begonias are fine in a partially shaded position. Marguerites, both white and yellow, work in well with geraniums if you wish mixed boxes. Heliotrope is also a very satisfactory plant, and of course for vines there is nothing better than vinca and German ivy.

Many a florist can work up a good bit of business with his local trade in this line. I know several places where they build boxes, either to order or have them in certain desirable lengths ready to fill for their customers. Sometimes they sell the boxes outright, other times simply rent them and get them back in the fall. This works into a steady business for them. They can get the stock plants of Geraniums for propagation the coming season by bringing the boxes back before they are entirely killed by frost, and there is no doubt that a big increase in this business can be brought

A Well Grown Fern

about by going after the filling of window boxes in a vigorous way.

I have had occasion several times in the past to remark upon the absence of pot-grown ferns around the Boston market. Having noticed such fine stock as is offered around Philadelphia, New York, as well as some of the Western cities, Chicago in particular, I couldn't help noticing that the storemen around Boston are dependent almost entirely upon bench stock which is badly drawn up, lifted from soil and put into pots and then brought into the stores for sale before these plants have had sufficient time to get well established in pots and hardened for the home.

Expressing myself along these lines with one of the local growers, I got the other side of the argument. According to his way of seeing it, the grower who offers pot-grown plants at a price which is necessary for such stock finds them left on his hands, and the storemen because they can buy a little cheaper for poor quality bench-grown stock go after that stock and leave the pot-grown ferns on the growers' hands. I was surprised to hear that this was the truth as anyone knows there is a world of difference in the two ways of handling ferns and the results are most decidedly in favor of the pot-grown stock. It is true that the public does not know or appreciate the difference, but they are sure to be disappointed in the way these soft ferns will act when they get them in the home. Why isn't it worth while for the storemen to handle the hardy stock that will give the best results, even if it must be at a higher price. If the customers are advised of the difference, I am sure they will appreciate it and it will mean more business.

STRAWBERRY ROOT-WORM

Prof. Sanders Writes About This New Rose Pest

One of the Philadelphia papers recently published an article regarding the strawberry beetle which during the last two years is said to have destroyed \$70,000 worth of roses in Bucks County alone. It is said in this article that over 50,000 rose bushes were destroyed at the Heacock Nurseries at Edgewood the last year and that 7,000 were destroyed in one greenhouse at Doylestown. In this connection it is interesting to find in the American Rose Annual for 1920, just out, a short article by Professor J. G. Sanders, of the Pennsylvania Bureau of Plant Industry, at Harrisburg, dealing with this pest. The article is reproduced in part herewith:

"Certain Pennsylvania rose-growers have suffered heavy losses of greenhouse roses caused by the attacks of the so-called strawberry root-worm, which has transferred its attentions from native outdoor plants to tender roots and foliage of roses growing under glass.

"In the Philadelphia district especially severe losses have occurred during the past three to four years, and various mechanical means for capturing and killing the beetles have been employed, but with poor results, and at considerable expense for hand-labor.

"The wonder is that these growers are content to use antiquated insect-control methods, and to suffer continued losses, rather than to ask of their state or Government agricultural officials advice and aid in control methods, which are often well known to the expert, and quite satisfactory when properly applied. The entomologists are interested at all times in reports of serious damage by pests, and they generally will do all they can to control the marauders.

"This new rose-pest must be studied carefully from every standpoint of its various life-stages, and the most vulnerable stage determined in order to plan control methods. The writer believes that the grub or larval stage, which destroys the roots, and perhaps the pupal stage, will be found more available for control under modern cultural methods than other stages. Soil fumigation, or drenching with tobacco water, or this in combination with some soluble chemical, may be found most advisable. Only by carrying out careful and extensive tests will the best remedy be found.

"Fumigation of the houses at night with cyanide to kill the adult beetles is advisable only when the house con-

struction is very good, and where overhead space is limited. Fumigation with tobacco gives no results. Soil treatment with tobacco water, or with cyanide, or other solutions, may prove effective in killing the underground stages, and tests will be made.

"One grower seems to think that the beetles become more abundant in those houses where the roses are permitted to dry out during the resting period, but careful observations will be needed to verify this statement.

The Pennsylvania Bureau of Plant Industry has made arrangements for co-operative investigations of this rose root-worm with the United States Bureau of Entomology. Investigations are now under way in the Philadelphia district, and every effort will be made to circumvent the new pest. Mr. C. A. Weigel's article describes and discusses the several stages of the pest and its principal damage to the plants. The writer similarly proffers his services in consideration of any suspected insects and will be glad to be advised of experiences with damage or control."

JAMES WHEELER

NATICK, MASS.

ORCHID COLLECTING.

Some of John E. Lager's Experience in Southern Countries.

There was no more interested or interesting attendant at the recent orchid show in Boston than John H. Lager of Summit, N. J., one of the best known orchid collectors in the world. What Mr. Lager had to say about his experience was deemed to be of such importance that the Boston Evening Transcript gave a half page to it in its feature section. In part the article reads as follows:

There are orchid collectors who merely go to the tropics and buy plants which the Indians have brought to easily accessible points, but these are not the true collectors. The true collector seeks unknown fields. Like many other men who have done big things in their lines Mr. Lager is modest, but he relates a typical experience of the true collector.

"On one of my trips to Colombia," he said, "I had struck my Eldorado in the form of a virgin *Cattleya* district. No man before had ever robbed these forests of its jewels. The plants and the varieties were superb, but the problem was how to get the plants out. The nearest I could get to a point from which I could get transportation to a certainty was 50 miles; but from where I was I could strike the same river at the point considered not navigable, in about six hours. I reasoned that with the water high in the river, even if there were plenty of rocks and the current strong, I could float my plants down in champanes (large canoes) and I set to work accordingly. I packed my plants at night in bags and sent 25 or 30 leads down to the river next morning, where I had tents pitched. The mules unloaded, they returned for more plants until I had the entire lot moved. Now commenced the real battle. I had to go down along the river a considerable distance and try and induce some of the owners of boats to come up where I had the plants, but as they had not done this before, it could not be done now. I was determined, however, and after considerable arguments I succeeded in convincing three parties that it could be done, with the result that they commenced to ascend the strong current.

I returned to my plants, waiting several days for the boats, when suddenly a freshet came rushing down the river, swelling it out of all proportions. I had the plants on a knoll near the river and in a few hours the water cut behind us and we were on an island helpless. We had to abandon our tent, the water eating gradually toward the plants. It seemed the ques-

tion of a few minutes and all would be lost, when suddenly the waters stopped advancing (this was during the night) and plants and all were safe. The boats were caught in the freshet and had to tie up to some rocks, and as the water rose in the river, they had to cut away trees and branches in order to save themselves. In the evening the boats arrived. We loaded the plants by candle light and started down stream early the next morning. Everything went well our champanes racing down the rapid current like feathers, missing stones or rocks by inches or less, but the net result was that I got the plants out.

Columbia a Paradise

"The most interesting and most important field for collectors is undoubtedly Colombia. Venezuela is second, and Brazil third. In Colombia we find eight different species of *Cattleyas*. The widest territory is covered by the *Cattleya Gigas*. I have seen this *Cattleya* climb up the mountains until actually stopped by the cold. The plants in such localities are as a rule, stunted, struggling as they do for an existence. The front part of the plant somehow will push out new leads repeatedly, while the bulbs behind lose their leaves and die off. Then again, they are found descending the warmer slopes and in a few places join hands, so to speak, with *C. Chrysotoxa*, and in such localities natural hybrids occasionally occur. This is extremely rare, for as a rule there is no promiscuous mingling of these species, for although they occur in close proximity, the lines of abode are strictly defined.

"This particular region I found to be exceedingly interested in orchids. The Andes or part of the same called 'The Cordillera Central' is here simply a mass of spurs and ridges in every direction forming great canyons, valleys, hollows and precipices of every imag-

inable shape, and where every kind of climatic conditions prevails, from the torrid to the cold 'Paramo.' The trails run along the mountain sides in some places at appalling heights, in places so dangerous that the only safe means of locomotion is to dismount and walk.

In the Cauca.

"At Cartago in the Cauca we are right in the heart of the home of the *Cattleya Chocconensis*.

"This *Cattleya*, unlike most of the others, occurs in forests on level land which is very swampy; the trees are as a whole small and stunted and overgrown with moss. Here, strange to say, I saw the most beautiful sight it has been my fortune to see. In these jungles, the plants grow by thousands, the trees being literally covered with plants and these in full bloom (end of August). I particularly remember that I got my mule under a tree and sitting in the saddle, picked a large bunch of flowers. These were particularly fine and not half open, as is the case under cultivation. The treatment we give this plant under cultivation probably has something to do with this. Where they grow, it is very warm and humid. I noticed in the early morning, as soon as the sun reached the forest, a dense mist would rise from the ground and envelop everything. This would gradually disappear, as soon as the sun became stronger.

"In the country around Miraflores, on one of the grassy treeless hills, I saw some of the most beautiful sights; the entire hills from foot to summit were literally covered with *Sobralia Violacea* in full bloom, in all shades from pure white to dark lavender. The best time to see this show was in the early morning, before the sun became too strong, with the night dew still lingering on the foliage and with the galaxy of colors on such a large scale.

HORTICULTURE, 78 Devonshire Street, Boston 9, Mass.

The city of Boston is divided into districts, and each district is numbered. If you will observe the number allotted to HORTICULTURE, it will facilitate the delivery of mail to this office.

We congratulate the officers of the S. A. F. on their new quarters in New York City. It is not surprising that Mr. John Young, the efficient secretary, is very much pleased with the change. In the old Siegel-Cooper Building on West 18th street the headquarters force have much larger quarters in a location which will be very convenient for everybody. The staff is now well located in the new quarters and no doubt visitors will be welcome.

Efforts have been made in several of the larger cities to carry on a somewhat extensive co-operative advertising scheme for Mothers' Day. Unfortunately the results as a rule have not been equal to those anticipated. For some reason florists do not seem to have recognized the opportunities offered by Mothers' Day, although, of course, there is always the same disinclination among certain members of the trade in each locality to pull in harness with their fellow craftsmen. We understand that a somewhat elaborate scheme of co-operation for advertising purpose which have been planned for Cleveland have either fallen through or been temporarily suspended because of failure on the part of the florists to get together in a wholly amicable and helpful way. This is apart from Mothers' Day advertising, but the difficulty experienced in getting concerted action applies to that day as to all occasions. Even in Philadelphia, where the Mothers' Day movement started, no great enthusiasm seems to be shown.

The publicity bureau of the S. A. F. has done some work to arouse florists throughout the country, but seems to have confined itself mostly to the middle west, paying little attention to New England.

Coming as it does, half way between Easter and Me-

morial Day, Mother's Day ought to offer an occasion for much profitable business, but the kind of business which must be worked up by publicity. This needn't be entirely confined to newspapers, either. We conceive that if all the street car conductors should be given a buttonhole carnation, with the explanation that it was because of Mothers' Day, much interest would be aroused. The law of suggestion would be set working, and many other people when they saw the display and learned the reason would hasten to get a buttonhole carnation, too.

After all, though, it may be well to emphasize the fact that carnations are not the only flowers permitted on Mother's Day. It will make better business to have it understood that buyers are encouraged to choose such flowers as the mothers whom they intend to honor in particular are or were fond of. In the middle west peonies are featured on Mother's Day, and there are plenty of other flowers, sales of which can be encouraged.

Railroad delays have proved embarrassing and costly to many florists throughout the country, but it is not the florist alone who has suffered from these delays. Nurserymen whose biggest shipping season is now on have been badly handicapped. Planting plans have been wholly disarranged and more or less stock en route has been lost or ruined. John Watson, secretary of the American Association of Nurserymen, has recently issued a bulletin to members of the association in which he calls attention to a notice sent out by the American Railroad Association Commission on car service. This notice reads as follows:

Complaints in considerable volume are reaching us and the Interstate Commerce Commission as well, from nurserymen in various parts of the country, indicating that there is little uniformity among the various roads with respect to exempting nursery stock, a highly seasonal and semi-perishable commodity, from embargoes.

To establish a uniform practice, it appears to be important at this season, and it is therefore suggested, that whenever general embargoes are placed which exempt food, feed, perishable freight, live stock and fuel, that such seasonal articles as field and garden seed, seed grain and nursery stock, be considered next in order of importance to receive preference in transportation.

Mr. Watson calls attention to the special emphasis placed on nursery stock in this notice and says that the action was taken as a result of conferences with the secretary of agriculture, the interstate commerce commission, and at the request of various members of Congress. Nurserymen themselves while laboring under great difficulties because of shortage in labor are doing everything in their power to fill their orders promptly. Moreover they are having a tremendous business this season in spite of higher prices. If buyers are unable to get their stock the fault is the railroad's.

Something was said earlier in the year about the strange fact that farm machinery and tools were being kept down to the old level of prices. Apparently, however, things have changed. Certainly the upward tendency has set in strong. This will be noticed by anybody who attempts to buy any simple tools for garden work. This applies even to wheelbarrows. Truth to tell, it is hard to buy a wheelbarrow at any price in some places, and dealers say they have difficulty in renewing their stock. One dealer happens to have a large supply of bodies, but is unable to get the wheels to go with them. It seems to be wise for all of us to make our old tools serve as well as possible this season.

George Watson's Corner

"You in your small corner and me in mine."

One of the cleverest things in the Rose Annual for 1920 is the letter from the Secretary of Agriculture. The editor shows his "get there" and "up-to-date" methods by capturing so promptly this splendid official endorsement from Uncle Sam.

"Barbara" is fine! Much delighted with her charming way of saying things. Wish she would remember not to slight "the bonny banks o' Ayr" even by indirection by calling them "English." No true Caledonian rose lover likes that. And there are lots of them. You remember what Lord Roseberry said after his celebrated journey round the world: "Scotland supplies the world with gardeners."

Dr. Mills pays a well deserved tribute to two of our veteran professional rosarians in his reference to John Cook and Gurney Hill. And when we are passing bouquets in that connection let us not forget the grand old name of Montgomery of Natick who gave us the glorious Russell and the thrilling Hadley among their other creations.

We hear the question asked often what climbing rose has the most fragrance. It is not easily answered, but we are reminded of at least one good one, in reading John Wister's article on Gloire de Dijon. If it would only do well north of Dixie we certainly could all have at least one good fragrant climber.

A Roosevelt rose bed in every public garden, says the editor. Splendid idea! Let the Duchess de Brabant delight the multitude with her manifold charms.

Bloomfield Abundance, spoken of by Mr. Thomas on page 36 of the Annual, may be in part an answer to the question of what is the most fragrant climbing rose. He says: "The perfume resembles that of the lovely Cherokee rose as does the bloom. It is hardy." This variety is being sent out this year by Bobbink & Atkins and A. N. Pierson Co. It scored five points for fragrance in the Portland rose tests, which is the highest mark given for any variety covered by the tests.

water is getting weaker. It is now only one-tenth of one per cent., according to that reliable Cuban authority. 'Tis a sad world my masters and pretty soon we won't even be able to shed tears over it. Paul Huebner says it makes him sad to go to Atlantic City these days. In his leisure intervals, from making the Reading system smooth and green and bright with blossoms, Atlantic City was refreshing in the good old days. But no more. It makes him sad now to see old Boreas blowing the foam off the waves. Jim Griffin says this is no subject for joking about—especially in a serious horticultural journal. Far be it from us. Dignity's our middle name. And this is no joke.

Mr. and Mrs. John Walker, home from their winter sojourn in the Isle of Pines, paid a visit to their relatives and friends in this city and vicinity during the week. Next week they proceed to their summer quarters in Youngstown, Ohio. Mr. Walker reports a very enjoyable time in the Island but missed his old friend Adam Graham of Cleveland this year—the latter, with his two daughters, being at present on a trip to Japan and the Orient. Mr. Graham also has an estate in the Pines and Mr. Walker reports it in the pink of condition, notwithstanding its owner's absence. Do you want to hear a true fish story? John says there's lots of fish down there but they won't bite. Water's too clear and they can see the line. Wily as weasels. Bet your boots if old man Dirwanger were alive he'd find some Portland, Maine, fancy scheme that would get 'em. Ask old P. Welch or old Walt Sheridan. What!

Edward H. Flood, New York and Philadelphia manager of the Johnston Brokerage Co., a big glass manufacturing corporation with headquarters at Pittsburgh, will make a business trip to the European glass centers in France and Belgium, sailing on the S. S. Finland, of the Red Star Line, about the middle of May for Antwerp. His London address will be Hotel Norfolk, Surrey St. Strand. Mr. Flood is well known in the horticultural trade, having been a manufacturer of greenhouse glass at his factory in Atco, N. J., for about a quarter century, and having always taken an active interest in club and society affairs. His genial personality and his broad minded progressive intellectuality have made him well known all over the country and we bespeak for him the glad hand among our European friends who may have the good luck to run across him on this his first trip.

Elias Pickles, who formerly was in the employ of W. S. Pino, at Providence, R. I., has now assumed charge of the seed department in the store of the Dudley Hardware Co.

STRAWBERRY AND RASPBERRY PLANTS

I have been selling plants since 1870. There has been put onto the market in that time 2600 named varieties, you can count your fingers and you will have all the best ones.

You will not throw my Catalogue into the waste basket after you have read

it. The average strawberry yield in the U. S. A., to an acre is 2000 quarts. On page 15 I will show you how to multiply this by four. The finest berry this side of Texas. I have 500,000 Plants of the Howard 17.

**Flowers Under
Glass**

An increasing demand for porch and window boxes has encouraged florists to give greater attention to this subject. Most often the orders are for plants to fill boxes already in place, but sometimes the florist is required to furnish the box as well. In that case he should be sure to have one which is at least ten inches wide and eight inches deep. Any smaller box will dry out too quickly. Naturally customers want to get quicker effects than in the flower garden, which means that they must be given heavy stock. At the same time this stock should be in small pots or the root balls will occupy too much space. Four-inch pots are almost too large. If the florist preparing for such a trade should use even smaller pots and make up for it by frequent applications of liquid manure, they would be able to arrange better boxes. There are many plants which can be used, but undoubtedly geraniums, with trailing vinca, especially the variegated leafed variety, or German ivy, give the greatest satisfaction to a majority of people. They are especially good for formal buildings, but in other cases the Rosy Morn petunia as the basis for the display is rather more attractive unless monotonous.

Petunias, ageratums, vinca rosea and trailing vinca make a good combination. Other plants which may be used in these boxes where the exposure is sunny include verbenas, lantanas, and Paris daisies. For large buildings where quite a display is required crotons, aspidistras, small palms, dracaenas and screw pines may be used. When it comes to a shady position it is best to depend upon ferns, dracaenas, asparagus sprengeri, crotons, coleus, and pandanus Veitchii. All this stock must have good attention until they are sold. They must be kept growing and free from green fly.

This is a good time to start winter flowering marguerites, for cuttings

root readily if kept shaded and moist in three or four weeks. When they are rooted, pot them up in any good soil mixture and keep them in a sunny place. Oftentimes they are given field culture with success, although some growers prefer to keep them in the pots. If you put them in the field, plan to lift them by the first of September.

The planting out of carnations should be finished as soon as possible this month. Then cultivation should be started at once and kept up at least once a week, except in a rainy spell. Even then cultivation should start as soon as the ground is dry enough. Pinching must not be overlooked, even though work is rushing at this season.

Early chrysanthemums may be planted to advantage now. Unless the early varieties are gotten in early it is difficult to have them ready when they are wanted, or at least to obtain strong growth.

There is danger of getting the rose houses too warm at this season. Early banking of the fires and proper ventilation are most necessary. The work of replanting should be kept going as rapidly as possible, and in the houses where cutting is going on a liberal application of water and fertilizer is needed. You will get your flowers to market in best shape if you cut them early and then keep them in the shade until they reach the flower room.

French hydrangeas are likely to prove almost as popular for Decoration Day as they were for Easter. If you have a stock on hand, keep them well fed with liquid manure. In a short time it will be possible to plunge azaleas, bougainvilleas and forced shrubs outside.

As soon as the dendrobiums cease flowering you should repot them and give them a good top dressing. They require a compost made of fern fibre and live sphagnum, with a little broken charcoal. It is very important that they have good drainage. They are grown both in baskets and in pots, but the former seem especially good for such varieties as devonianum, chrysanthum, Wardianum and Pierardii superbum.

CHANGES AMONG GARDENERS.

Recent changes among gardeners are as follows:

Albert H. Laine, formerly gardener to Mrs. H. M. Hanna, Jr., Willoughby, O., is now with Warren Cichnell, Cleveland, O.

Robert Cochrane has accepted the position of gardener on the Bradley Martin estate, Westbury, L. I. He was formerly at Valley Ridge Farm, Mt. Kisco, N. Y.

Herbert Stuart is now gardener on the estate of H. B. Sherman, Long Beech Farm, Augusta, Ga.

George Alcock, formerly of Chappaqua, N. Y., has been appointed gardener for Miss M. M. Newall, Bedford Hills, N. Y.

Nicholas Tabb is now gardener for Benson B. Sloane, Cedarhurst, L. I., N. Y.

John D. Wilson has left Greenwich, Ct., and taken the position of gardener on the H. H. Dow estate, Midland, Mich.

Chas. Swain has taken the position of gardener on Mrs. M. Perkins estate, Chester, Mass.

Theodore Chase is now gardener for Miss Marshall, Williamsburg, Va.

Charles Miller has been appointed gardener to Miss G. Arentes, Dumbar-ton, Va.

John David Boyd, formerly of Newport, is gardener at the J. E. Barbour estate, Paterson, N. J.

Paul Powers has accepted the position of gardener to Charles Sherman, Oyster Bay, N. Y.

William Barron is now gardener on Prospect Farms, Maplewood, N. J.

Alexander Michie has been appointed superintendent on the Childs-Frick estate, Roslyn, N. Y.

William Allen has secured the position of gardener to Leroy Frost, Nyack, N. Y.

Paul Hamer is now gardener on the T. Tower Bates estate, Convent, N. J.

Alexander Sherriffs has accepted the position of superintendent on the Henry Sanderson estate, Oyster Bay, N. Y.

Felix Woods succeeds Alexander Sherriffs as gardener to Mrs. F. S. Smithers, Glen Cove, N. Y.

REUTER AS A TRAP SHOT.

Since the old days when clay pigeon shooting was a part of the entertainment at the S. A. F. Conventions, the florists have dropped out of prominence excepting as they may be known as shooters locally. L. J. Reuter of Watertown, Mass., put himself in the lime light on Monday and Tuesday of last week at the annual Patriots' Day shoot of the Boston Athletic Association. This is an annual event and

shooters of prominence from all over the country attend. The New York Athletic Club sent over two teams in competition and it was the best Patriots' Day shoot ever had at the B. A. A. traps at Riverside. In a field of 150 shooters, Reuter stood in 11th place, which is an enviable mark considering the class represented. He was tied high gun in his class for the

two days on the full program of 300 targets, and lost in a shoot off by 3 targets.

W. E. McKissick, of the Leo Niessen Co., of Baltimore, has been laid up for some time as a result of a strain occasioned when helping to move some heavy cases of plants.

Little Talks on Advertising

I have been greatly interested to note the extent to which florists in many parts of the country are having their imaginations stimulated by the slogan "Say it with flowers." During the past week a number of instances have come to my attention where florists have thought out an elaboration of the slogan so as to give a forceful and advertising appeal. No doubt the originators will make no objection if other florists pattern after them.

The Park Floral Company, of Cleveland, Ohio, has a very pretty advertisement in the Cleveland Press, which starts off in this way:

SAY IT WITH FLOWERS

The language that all understand. They will be delivered on time to any address in Cleveland or anywhere in United States.

Although special emphasis is given this point of prompt delivery anywhere, the advertisement also contains a special for Saturday in the following line:

All Spring Flowers \$1.00 per dozen.

The Kane Greenhouses, of Kane, Pa., have evolved another way of using the slogan. Their advertisement in large type reads as follows:

SAY IT WITH FLOWERS At Popular Prices.

The advertisement is elaborated by the explanation that this is an after-Easter sale and is made possible by the fact that some of the bulbs and plants failed to bloom in time for Easter. Accordingly they are being disposed of for half the price they were intended to sell for. As there are sure to be bargain hunters even among flower lovers, it is safe to say that this particular advertisement brought many buyers. Of course such an ad. can be used only when there is a surplus stock, but it offers an excellent means of obtaining a good clean-up.

These special sales, by the way, are growing in popularity, as is evidenced by the advertisement appearing in different papers. The Kochs Flower Co., of Alliance, Ohio, recently put out a big advertisement announcing a week end flower special. This included both cut flowers and potted plants. I think that there is much merit in selecting a special day for special sales. This plan is less likely to have a cheapening effect on the store's business, especially if the difference in prices is quite marked on that special day. Many

people will wait for special sales for a time, but eventually they will find it necessary or desirable to have flowers on other days, and in this way become permanent customers. It is worth while to make special sales at intervals, even if the profit is cut to the quick. This point, however, about having such sales on some special day or when some unusual occasion warrants it, is one not to be overlooked.

Hody & Tulea, of Elyria, Ohio, evidently have some such thought in mind when they advertise in the local paper, "Two dollar values for one dollar and one dollar values for fifty cents but on Saturdays only." This concern, by the way, has a somewhat catchy motto which is, "Better quality for less money."

The Annex Flower Store, of Cleveland, advertises a special cut flower sale every day, but I submit that an advertisement of this kind loses its force. It stands to reason that prices which prevail every day cannot be special, and there must be a feeling in the minds of the public that possibly the quality is not as good as offered at other places where higher prices prevail.

Schneider, of Springfield, Ohio, makes generous use of advertising space, and usually has something out of the ordinary to say. In a recent issue of the Springfield News, for example, his advertisement is headed by this question in large black type:

"Why wait until your friends are sick before sending flowers?"

He then goes on to say:

"Of course we all like to receive flowers when we are sick, but we can appreciate them more when we are in good health."

It seems to us that this is a very logical argument and one which is certain to have weight with the buying public.

To go back once more to the national slogan, I find that J. C. Botkin & Sons, of Urbana, Ohio, have been able to incorporate the line into verse. A recent advertisement of this concern is headed with this bit of rhyme:

"Your neighbor has got a brand new boy,

As welcome as April showers;
You want to wish them lots of joy
So say it with flowers."

It strikes me that here is a bit of originality that deserves success.

If I might make one suggestion, it is that the meter would be greatly improved by inserting an extra foot in the last line. Run the poem over with the last line changed to read:

"So why not say it with flowers?"

And see if the rhyme doesn't fall more pleasantly on the ear.

RAMBLING OBSERVATIONS OF A ROVING GARDENER

If the school of horticulture for women at Ambler, Pa., does not attract a host of students this season, it will not be due to any lack of good publicity literature on the part of the officers. A circular which has just reached my desk from the able and popular director, Miss Elizabeth Leighton Lee, is exceedingly well written. It starts off as follows:

"There are girls who can dig a bed as well as make a bed. They can plant a tree, prune it, spray it and harvest the fruit. They can plant, cultivate and pick vegetables. They can plan a flower garden, raise the plants, dig the bed, plant it, mulch it and do all the technical and untechnical things."

Then the author of this circular brings in a bit of verse which instantly catches the eye and brings a smile: "She does not look so large and stout, And yet they say she laid that garden out."

With all the qualities already ascribed to the Amber girls, it is probably safe to say that they could also lay out any man who dared to criticize their skill with the hoe, the rake or the pruning shears.

Good General Farmers

These girls, however, do not stop with purely horticultural activities. They can also milk the cows, care for the poultry, and swarm the bees. Their training all along the line embraces every feature of the work which they undertake. In the greenhouse, for example, they learn the management of the furnace as well as the care of the plants and the forcing of vegetables. Added to all this—and here is a point of no little importance—they learn the scientific side as well as the practical side of their work. In other words, they know what they are doing and why they do it, which is more than can be said of some men I have seen in greenhouses.

All joking aside, the work of the school of horticulture for women at Ambler is proving of greater value than even had been anticipated when

the school was started. The fact has been demonstrated here as in England that women are well suited for many phases of horticultural endeavor. To be sure, it is a new profession for women, and it is not so easy now as it will be for employers to realize that they can fill the bill. Yet many of the older avenues of employment open to women, such as typewriting, stenography and teaching, are overcrowded, at least in places where the salary is at all adequate. To be sure the financial returns from horticulture are not as high in proportion as in some other lines of work, yet it opens a new field for women and one in which there are many possibilities. Apparently trained women have no difficulty in finding good positions. Even if the graduates of the school get married, which many of them do, the knowledge which was acquired at the school can readily be practiced at home, often in such a way as to make the home keeper a money maker as well.

Has the School Proved Itself?

With one exception all the graduates and many of the Special Course students are working along horticultural lines, either in positions, professionally for themselves, or on their own places. Several are "Consulting Horticulturists," Superintendents of Estates, and teachers of large school gardens. One, who occupied a position at the University of Tennessee acting partly under the government in connection with the Smith-Lever Act for the promotion of Agriculture, has just accepted a position in gardening in a model village in the cotton mill district in the south. The school enrolls pupils from all over the country.

It is neither a self-supporting nor a charitable school, but one which was founded several years ago by a number of public spirited women who realized the need of a new and healthful outlet for women in business.

The fees are kept as low as possible in order that women of limited means may be able to avail themselves of the opportunity offered.

Healthful recreation as well as work is encouraged. Outdoor plays and masques are favorite amusements. One particularly charming play was given in a newly cut wheat field. It was an evening when the whole earth and sky were flooded with that wonderful light which comes at the time of the setting of the sun and the rising

HENRY F. MICHELL CO.
518 Market Street Philadelphia, Pa.

of the moon in July. A poppy swayed gently in the wind and a patch of cornflowers stirred and quivered in delight. A bee from a neighboring hive darted hither and thither sipping honey first from one flower and then from the other; and they lifted their heads and welcomed his friendly kisses. But, the poppy and the cornflowers and the bee were large, strangely large, and oh! so pretty! Why, they were girls—just girls, after all, in a flower masque—taking part in the commencement activities of this new kind of school.

Women Workers Needed.

Altogether the school has taken an important place among educational institutions in this country. I am sure it deserves all the help which it can be given by gardeners, florists and everybody interested in horticulture from any angle. There are gardeners no doubt who have never thought of sending their girls to such an institution, perhaps not realizing that a school of this kind existed. Yet it might be the most desirable form of education which they could receive. Gardeners, too, can make no mistake in speaking a friendly word for the school. There may be a certain feeling among narrow minded men that it is not good to have women enter the profession, but in my opinion the time is coming when women will be found in greenhouses and doing all kinds of farm and garden work everywhere, and that fact may as well be accepted now as later.

A BIT OF CONSTRUCTIVE CRITICISM.

During the past few years of constructive building of our Association and with the all enduring foundation which had been previously built and with which our F. T. D. and its principles have flourished and is still furthering its progress, may we not feel doubly proud of our accomplishment and progress.

With the ever growing increased volume of telegraph delivery business of flowers, who can afford to say that he will not join? During the past year many vicissitudes have arisen due to strikes, storms, etc. which would have made the sending of flowers impossible, yet through our organization we were able to cope with almost every situation.

Occasionally, however, we get an order to someone who hasn't the slightest conception of business, evidently, whereby a floral piece is ordered and because of the scarcity of flowers, or something else, several days afterward, will come a note saying that it was impossible to fill the order, and not having the foresight to use something at least, to fill the want as best he could.

Now, the purpose of this article is this: that in the event of anyone receiving an order, regardless of conditions, fill it as best he can, but send something, so that the customer on the other end, will feel that you did the best you could. Don't come back with the answer, "no flowers to fill your order." Use leaves foliage, plants, or whatever possible under the circumstances, but do something to prove that at least you had some

conception of the other fellow's feelings. This will go a long way towards helping our F. T. D. orders. This occurs mainly in small towns.

Unquestionably, many of you have had this experience or a similar one, and if this simple remedy mentioned above, is applied to the case, it will go a long way toward helping the small weaknesses we have had happen several times.

With the hope that this will attract the attention of those who have had occasion to have this occur and profit by past experience and the desire to further improve one of the petty little things that creep into our F. T. D. business, will say that we are to be congratulated on the wonderful strides already made. We are also proud of the fact that florists generally are on the job in regards to the promptness of meeting their obligations when bills are due one another. This is particularly gratifying as it is one of the most essential and encouraging steps into furthering progress and it reminds us of John Randolph who said, "I have discovered the Philosopher's stone that turns everything into gold; it is, pay as you go."

This is one of the essential steps to progress so keep it up for further success.

HENRY PENN.

GENERAL NEWS.

Horace F. Merrill and Clayton L. Holtman have bought the A. L. Merrill greenhouses at Sayre, N. Y. The new concern will be called the Sayre Floral Co.

Charles Buxton of Nashua, N. H., has been in Boston the past week buying heavily to take care of funeral orders.

Ground has been broken for the erection of a new flower shop at Worcester, Mass., to be carried on by the Quarry Floral Co. This company already has three large greenhouses on the adjoining property, and the new store will give them a fine plant. C. W. Fisher is the architect.

Edward C. Scott, for some time manager of the Westminster Greenhouses at Providence, R. I., has resigned and will take up farming in Connecticut.

Every Reader of "Horticulture" Needs

DR. L. H. BAILEY'S BRAND NEW Standard Cyclopedia of Horticulture

Six large quarto volumes. More than 3,000 pages. 24 full page exquisite color plates. 96 beautiful full page halftones. More than 4,000 text engravings. 500 Collaborators. Approximately 4,000 genera, 20,000 species and 40,000 plant names.

THE New Standard Cyclopedia of Horticulture has been freshly written in the light of the most recent research and experience. It is the fullest, the newest, the most authoritative of all works of its kind and constitutes the most conscientious attempt that has ever been made to compress the whole story of our horticultural thought, learning and achievement into one set of books. It is both an Encyclopedia and a Manual.

A Few of the Many Important New Features

Key to Identification of Plants This is a device to enable one to find the name of a plant. The name thus found is quickly referred to under its alphabetical location, where full information will be found in regard to it.

Synopsis of Plant Kingdom This is one of the most important features of the new edition. It constitutes a general running account of the classes, orders, and groups of plants, with a brief sketch or characterization of 215 of the leading families comprising those that yield practically all the cultivated plants. These family descriptions give the botanical characters; the number of genera and species and the ranges; a list of the important genera; brief statements in regard to the useful plants; and diagrammatic illustrations.

Illustrations There are 24 colored plates; 96 full page halftones; and more than 4,000 engravings which serve as guides in the text.

The Glossary This is an analysis of all technical terms that are used in the work and in similar works. It comprises botanical and horticultural terms with brief definitions.

Translation and Pronunciation of Latin Names In Volume I is inserted a list of between 2,000 and 3,000 Latin words used as species—names of plants, giving the English equivalent or translation and the pronunciation.

Class Articles Special effort has been made to secure the best cultural advices for the plants requiring peculiar or particular handling. Here are some of the titles of these articles: Ants; Autumn Gardening; Bedding; Diseases; Drainage; Floral Designs; Formal Gardening; Hotbeds and Coldframes; Insects; Landscape Gardening; Lawn Planting; Orchards; Rock Gardening; Subtropical Gardening; Tools and Implements; Village Improvements; Window Boxes, etc.

General Index The final volume contains a complete index to the entire work, enabling the reader to locate volume and page of any subject he has in mind.

The complete set of six volumes, bound in decorated buckram, will be delivered to you for only \$6 down and \$6 a month for 6 months, until the full amount of \$42 has been paid. Cash price \$41.

Further Particulars Sent on Request

HORTICULTURE, 78 Devonshire St., BOSTON, MASS.

HORTICULTURE, 78 Devonshire St., Boston, Mass.
Enclosed find \$6 for which send me the "Standard Cyclopedia of Horticulture" in buckram, and I agree to pay you \$6 per month for 6 months until the full amount of \$42 has been paid. (Or cash with the order.)

Principles and Practice of Pruning

By M. G. KAINS

Lecturer on Horticulture, Columbia University

Few practices in the handling of plants, especially fruit bearing plants, attract so much interest as do those of pruning. The methods are so varied, the results so diverse, and the opinions of growers so apparently contradictory that this subject is always one of the most interesting, and the surest to hold attention and arouse discussion.

Particularly during the last ten or fifteen years when the principles of plant physiology have been more and more satisfactorily applied to plant production and management has interest settled in pruning. During the latter half of this time also more and more investigations and tests have been conducted by experiment stations and other workers to test out methods and principles in the interest of science and for the benefit of growers. The accumulation of such new knowledge has become very considerable especially in the last decade, but it is necessarily so scattered that very few growers have access to it, hence the demand for a book, which shall present the really important features of these investigations as well as set forth the fundamental principles based upon the laws of plant growth.

This volume is lavishly illustrated mainly by actual photographs of specimens which show good and bad practices. The author has spared neither time nor expense in gathering his photographs, each one of which tells its story.

After a few pages of introduction the author discusses Plant Physiology as related to pruning. A chapter takes up the Philosophy of Pruning, itself a very interesting subject. Then follows a classification and clear discussion of Buds, very fully illustrated from life. How Wounds Heal is an exceedingly interesting chapter, as are also those on Prevention and Repair of Mechanical Injuries, Pruning Nursery Stock, Young Trees, Mature Trees and Odd Methods of Pruning and Training, rejuvenating Neglected Trees and Practical Tree Surgery.

Profusely illustrated. 400 pages. 5½ x 8 inches.

Cloth. Net, \$2.00.

Plant Propagation, Greenhouse and Nursery Practice

By M. G. KAINS

We have had many inquiries from time to time for a reliable and up-to-date book on plant propagation, but were always at a loss to find any publication that we could recommend. The subject has been dealt with in fragmentary manner only in books that have come to our notice. So it is well that this new work has been issued, especially as it is both comprehensive and practical, and it should meet with a ready sale among plantmen, nurserymen and gardeners. There are nineteen chapters covering in detail topics of germination and longevity of seeds, propagating by buds, layering, cuttings, grafting, etc., fruit tree stocks, scions, etc., and there are eight pages of condensed cultural instructions in tabulated form, covering annuals and perennials from seed, woody plants, evergreens, vines, bulbs and tubers, greenhouse and house plants, ferns, palms, water plants, orchids and cacti. The illustrations are numerous, comprising 213 figures and halftone plates. There are 322 pages well bound and on heavy paper, teeming with helpful information. It is a book which no cultivator can afford to do without. It is worth many times its price. Copies can be supplied from the office of HORTICULTURE at publisher's price, \$2.00.

**HOW DEUTZIAS ARE FORCED.**

When Deutzias are to be forced, it is better to grow plants solely with that end in view rather than lift bushes from the shrubbery for forcing, says a writer in Gardening Illustrated. When grown for forcing, the cultivator naturally directs the energy of his plants to the production of the best flowering wood, all else being cut away. Thus he can secure plants of a size easily handled, and capable of producing the maximum number of flowers in the shortest possible time. To obtain suitable plants, he takes cuttings of young shoots three or four inches long in June or July, and inserts them in sandy soil in a close and warm frame. Roots are formed quickly, and the young plants are ready for planting in well-worked, loamy soil in August. They can be placed six inches apart in rows fifteen inches apart, and be left for fifteen months. During the following summer the shoots are restricted to three or four on each plant, all else being cut away as they appear. In October they are lifted. If small plants are required for forcing, the best are taken, the others being replanted twelve inches or fifteen inches apart in rows eighteen inches apart, the object being to allow plenty of light and air to mature the shoots. In February cut the plants down to within two or three inches of the ground, and when new shoots appear restrict them to from nine to twelve on each plant. During the summer these shoots will grow from fifteen to twenty inches long, becoming well ripened during autumn. In October lift them and place them in 6-inch or 7-inch pots, plunge them in ashes, and force as desired. After forcing, cut all the flowering shoots back to the point where a strong young shoot appear, keep the plants in a structure free from frost until they can be planted out in the nursery again, and feed them with manure-water. Remove weak growths, so that all the vigor of the plants is directed into the production of strong shoots, and as soon as danger of frost is over, plant them in rich soil. As a rule, it does not pay to keep the plants for more than three years or four years, a succession of young plants giving better results and less trouble than bothering with odd ones. By rooting cuttings from forced plants in March and planting them out in May a growing season may be gained.

In addition to *D. gracilis* and *D. Lemoinei*, the following species, varieties, and hybrids are suitable for forcing:—*D. compacta*, *D. discolor*, *D. longifolia*, *D. parviflora*, *D. purpurea*, *D. campanulata*, *D. carminea*,

SEEDLING TREES.

We have written of the wild flowers, mossy lichens and stones which can be shown in our miniature Wild Gardens in May. We have not mentioned the beautiful little seedling-trees which could be used with good effect. Later in the summer those tiny trees seem lost in the general growth of our forests. This is partly because they lose the beautiful red color which graces these little maples in May, or the exquisite soft velvety red and silvery white of the oaks. For a dark effect or background the seedling cedars or small pines could be shown.

If we go to the woods for material for our Wild Gardens we will come home with our hands full of treasures of which we had not thought when setting forth.

This spring a package of wild plants was sent to us from Mount Vernon in the state of Washington. Thirty ferns of various kinds with roots of salmon berries and wild blackberries. Tucked in among the larger plants were some Tiarallas or foam-flowers, some rattlesnake's plantain and a pretty little vine. Coming in the midst of a blizzard, it seemed to bring the very breath of the woods of Mount Vernon with it.

The ferns were so carefully packed with moss around their roots, that they began to grow as soon as they were taken out from their canvas-cover and placed in a box till the beds by our wood road were open.

The whole package came as a return for a paper on Japanese Wineberries, written for HORTICULTURE last summer. The Wineberries were wanted for trial in Mount Vernon, the Salmonberries in Weston. Later in the season we will describe the Salmonberries. Now about all that we know of them is that we have wanted to grow them ever since our return from Alaska. We also want to watch the little yew or taxus and the Libocedrus decurens or cedar seedlings which were included in the package.

The Rafters in Heacock's House

In our last two ads. you will recall we called especial attention to the great width between the two columns in our 78 foot house. Now let's see how and what our rafters are that such a thing can be done and the house have ample strength and rigidity. From the column to the ridge we use a rafter $3\frac{1}{2}$ inches deep and $\frac{1}{2}$ inch thick, on one side of which is hot riveted a $1\frac{1}{2}$ by $1\frac{1}{2}$ by $3/16$ inch angle.

See b and c on center illustration. This angle prevents the rafter bending or buckling sideways. Compare in your mind the amount of shade a rafter of that size casts in connection with the trussing necessary in two column houses.

From the column to a point just above the grade line we run one solid rafter and post combined. It measures 5 inches wide and $\frac{1}{2}$ inch thick. See on above cut.

Bear in mind that there are no welds or splices of the rafter with the post.

They are in one solid piece from column to the heavy cast iron post base; the latter embedded in concrete 12 inches below grade. Such a rafter and post combined needs no trussing. Every point is as strong as every other point. There are no weak spots. No spots requiring stiffening or strengthening.

Now look at that column cap and see how rugged it is. Note how its many bolts binds the rafters and column securely together. Don't lose sight of the fact that the cap is bolted through and through the column. No possibility of a slip off with that cap.

Be on the lookout for our next ad. about more of the strong points of this Samson like construction of ours and remember that we go anywhere for business, or to talk business.

FERNS

THE VICTORY FERN (*Nephrolepis victoria*)

We take pleasure in offering this new and valuable variety of *Nephrolepis*. It is a beautifully crested form of "Teddy, Jr." with fronds frequently subdivided on the ends, making a most unique, distinct, and desirable variety.

This fern was

AWARDED A BRONZE MEDAL

at the S. A. F. Convention at Detroit in August, 1919. The judges of the award reported as follows: "Special stress is laid on the new fern Victory, with a rapid growth and a branching at end of fronds, making it a shapely plant. It should be a commercial success, and we **RECOMMEND IT MOST HIGHLY.**"

Strong plants, 2½-inch pots.....\$3.00 per dozen, \$20.00 per 100
Extra fine specimens: 6-inch, \$1.00 each; 8-inch, \$3.00; 10-inch, \$5.00; 12-inch, \$7.50.

NATIONAL PUBLICITY CAMPAIGN.

The Skinner Irrigation Co., of Troy, O., in sending a cheque to double their subscription to our Campaign Fund write, "We certainly appreciate the fact that a wide advertising of this slogan results in more business for us, and it seems rather strange that so many of the florists require urging to contribute to this fund."

The Skinner people are quite right. It is strange. And it becomes more strange as the benefit resulting from the small investment we are able to make with the fund available piles up. The florists do not realize the worth of that slogan—its worth in dollars and cents. We have often called attention to this fact, especially as it is brought home to this office. Only last week we received a communication from a large advertising agency in St. Louis requesting permission to use the slogan, merely as a reference, in a page advertisement they were placing in the Saturday Evening Post, as part of a series entitled "Signs of Friendship." In making the request they said, "As you know, in Holland the hospitality of the natives is best expressed by their presentation of flowers to strangers. We have capitalized this thought in the painting of K. M. Ballantine, a proof of which we have attached hereto, the text of this advertisement beginning with the phrase 'In Holland they say it with flowers.' Your slogan 'Say it with Flowers' has been so extensively advertised that it will be at once recognized in this copy of ours, and for that reason has a particular value to you as additional publicity for your organization."

It may be said right here that the slogan has proved so attractive that we have had a very great deal of this additional publicity. The issue of "Judge" for April 24, contained a full page sketch demonstrating a novel use for flowers, captioned by our slogan. This sketch, by the way, is reproduced in the May issue of our Society's "Journal."

These examples serve to show how our slogan is taken in the outside world. What if we had to pay for all this extra publicity. But we get it, simply because we are paying to establish the slogan. The "we" in this case means that small body of florists, loyal to themselves, loyal to their industry, and benefactors to those out-

side of their own group, the body we have often referred to as "George." Yes, George has been paying for it. And it looks as though George must continue to do this—to the shame of the large army of non-subscribers whose niggardliness keeps them aloof from the best game ever played in the interests of their own industry—the industry which insures their living, and which can be made to establish a patrimony to be enjoyed by their families when the builders are called West.

We need now more subscriptions. We are a long way from our goal, and the months seem to pass quickly. Won't you, Mr. Non-subscriber, help George just a little bit—help him to help you. Your cheque could never be appreciated more than now.

EIGHTH INTERNATIONAL FLOWER SHOW.

The members of the Joint Committee representing the Horticultural Society of New York and the New York Florists' Club appointed with power to arrange for the Eighth International Flower Show—New York—met in the Secretary's Office on Monday, April 19. Organization of the Committee was completed by the election of the following officers: T. A. Havemeyer, chairman; John Young, 43 West 18th street, secretary; F. R. Newbod, treasurer.

It was decided upon March 14, 20, 1921 for the dates of the show—Arthur Herrington was appointed manager and his name added to the Committee—F. W. Payne was also added to the

BOX-BARBERRY

Have you seen a garden bordered with BOX-BARBERRY this spring? Every plant bright and green,—not a dead one. A strong contrast to the northern Buxus bordered garden, now either dead or sadly winter injured, brown and dejected looking.

Mr. Siebrecht, the veteran plantsman, on seeing the garden the other day shown in accompanying illustration, exclaimed with his characteristic enthusiasm, "magnificent, there is a fortune in it for the nurserymen."

We offer you well rooted dormant summer frame cuttings ready to set out direct into the nursery without further expense to you at

\$65.00 per 1000

ALL SOLD OUT OF LARGER SIZES

Many of the leading catalogue firms have already contracted with us for their supply for the ensuing season, and others are buying these **FRAME GROWN PLANTS** for their own planting preparing for the enormous demand which is sure to follow.

It is a safe statement that BOX-BARBERRY will soon be the plantsman's best seller.

THE MARKET.

Stimulated by Mother's Day buying, the market all over the country has shown a decided upward tendency during the past week. It didn't begin to appear much until Wednesday, but on that date prices jumped quickly. Of course the demand for carnations was strongest, but with a growing scarcity of these flowers all things went up in sympathy. Roses in particular felt the rising impulse. The latter part of the week showed the market not only steady but strong, and on the whole inclined to be short.

The cool and cloudy weather naturally interfered with the supply of carnations, which also had its effect on the current prices. Altogether carnations were by no means over-plentiful for Mother's Day and sold pretty uniformly throughout the country at from 10 to 12c. There seemed to be a sufficient number of roses but they sold readily at from 10 to 30c. Callas have stuck around \$2 and \$3 per dozen.

Sweet peas are usually liked for Mother's Day, but the price does not seem high and there have been plenty of them selling for \$1 to \$3 per 100. Marguerites have gone especially well in the Pittsburgh market and are quoted at from \$4 to \$6. Gardenias were very short, few if any being offered in Buffalo or Pittsburgh. A few peonies have begun to show up in the Eastern market but in very scant supply, coming in of course from the South.

Buffalo has had a good sale of Bulbous flowers, daffodils bringing \$3 to \$5 and Von Sions \$3 to \$4. Tulips have sold from \$3 to \$4 also. Lily of the valley are bringing \$8 and \$10. Violets still remain at a low average, bringing not more than \$1 with light demand. Altogether, there was a

good, fair business, with the crop kept somewhat below normal by weather conditions.

BOSTON FLORISTS' ASSOCIATION.

This association held its last monthly meeting for the season at Hotel Westminster Tuesday night. Mr. Henry Penn presided, and about fifty members were present. The association was very well pleased with the treatment it received at the Hotel Westminster, having a good room and pleasant surroundings.

The table decorations were provided by Mr. Sidney Hoffman, who arranged them personally. They consisted largely of Ophelia roses in fine condition and made an excellent display. Mr. Hoffman was given a vote of thanks for his work.

In the course of the evening Mr. Penn spoke of the picnic which is to be held in July, and which it is expected will be as great a success as was the first picnic last summer. A committee to make plans for the event was appointed, this committee consisting of Mr. Hoffman, Mr. Nicholson and Mr. O'Brien.

The speaker of the evening was Mr. W. H. McMasters, a local newspaper man, who related many humorous anecdotes which created much laughter, although they did not have any close relation to flowers or the flower business. Several vocal solos were also rendered during the evening.

Altogether the affair was in the nature of an entertainment and but little real business was considered. The members seemed to think that it was a good plan once in a while to get away from the practical end of their work and have an evening of real amusement.

SPLITTING LOSSES BETWEEN SELLER AND BUYER.

Attention is now being called to the resolution offered and adopted at the regular meeting of the F. T. D. A. at Buffalo, N. Y., Oct. 13-14, 1919. It reads as follows:

"Whereas, the F. T. D. Association has been established upon the broad foundation of fair dealing; and

"Whereas, it is the conviction of this Association that the same spirit of fair dealing should prevail also in such transactions in which the wholesaler, grower and supply house are a party; and

"Whereas, in transactions, where goods are entrusted to a transportation company, and where such goods are lost or damaged, it has been the custom for the shipper to disclaim responsibility after delivery to such transportation company, resulting in the purchaser alone having to sustain all loss:

"Therefore, be it resolved

"Lost or Damaged Goods Agreement.

"The purchaser and seller in this transaction agree that in case of loss or damage of the goods while in the hands of the carrier, a joint claim will be filed with said carrier; the bill to be paid upon adjustment by carrier. Should claim be disallowed in whole or in part, then loss, inclusive of carrier's charges and costs of collection to be borne equally by purchaser and seller."

"And be it further resolved, that all members of this Association be furnished with a copy of this resolution, and be requested to use every effort to enforce the provisions of said agreement".

THE TALK OF THE TRADE

Apparently the florists have something to learn from the department stores when it comes to florid language in advertising flower products. In a big advertisement put out by Bloomingdale's in New York, I find one corner given over to flowers and plants. The advertisement starts off by mentioning thousands of young rose bushes ready to set out, and states that they will make a city

courtyard into a garden beautiful or transform a suburban plot into a paradise of roses. That is a fairly flamboyant way of putting it, but not to be compared with the final expression of the writer when he comes to cut flowers. He cuts loose as follows:

"Pansies, velvet as night, golden as dawn. Sweet peas ready for a rosy flight."

Perhaps Mr. Penn will get this advertising word juggler to come over

and tell Boston florists how to give their advertising a true literary finish.

From all that I have been able to observe and hear, an unusual quantity of chrysanthemum stock is being planted this year and this has set me to thinking what the cause may be. The answer I get from different growers is that the uncertainty prevailing in the florist business is directly the cause. Many growers are at sea as to what quantity of coal they can get, and while they are not

Hardy Hybrid Delphiniums

at all in doubt about the high price they will have to pay, it raises the question whether it will be possible to operate their entire amount of glass. The serious problem of coal coupled with the labor troubles has led many a florist to plant for next year in a way that means a cutting down of his range. Some of them figure that it will not be possible to keep everything going at a profit, consequently they are planting heavily of chrysanthemums, and plan to let some of their houses remain idle until spring.

We may naturally look for an oversupply of flowers in the fall until the chrysanthemum season is over, but after that time the market is apt to be just the contrary. What flowering stock there will be available will certainly bring high prices. It remains to be seen if this prediction is accurate, but I think there are plenty of indications that will bear me out in saying that chrysanthemums will be over-plentiful, and after those are gone a stiff market will prevail through the winter.

The latest information regarding lily bulbs for this season would indicate that while no positive prices are fixed, the florist will be obliged to pay close to last season's market. There is a possibility that there will be a slight reduction; in fact, if the large bulb buyers are successful they may be able to work the price down \$5 to \$10 per case, but the Japanese are holding out at present for high prices and most crops are being bought subject to market at the time of harvesting.

If the high prices of the past season are going to cause the growers

to cut down their plantings, it may work out that the final price will be proportionately cut down. The same condition exists as to French bulbs. Their prices are set away up in the air, and the only thing that saves the American buyer is the rate of exchange coupled with the much lower cost of transportation than last year. If French exchange does not advance materially, paper whites and other French bulbs will sell at about the same price as last season.

We must not forget that we are going to have White Roman Hyacinths admitted this year, but they are going to be very high, not very far from \$60 per thousand.

Flower spikes of Delphinium, both Formosum and Bella Donna, have become a mighty good crop for the market, and some most excellent quality blooms have been seen in the different markets around the country. One of the most successful growers handling this crop has been Andrew Christensen of Stoneham. For the past few weeks he has been marketing excellent stock, and it has brought very good returns.

The very best Gypsophila that I have seen either this or any other year was at the store of H. M. Totman Co., Randolph, Vt. It certainly was excellent quality and I was glad to note that Mr. Totman had grown this stock in the way that I have recommended a number of times in these columns. He raises it in seed flats, shallow, poor soil, transplanted only once, and that means a minimum amount of labor and space needed. We know very well there is no sense in taking up valuable space and babying this crop along when the result cannot equal that of the flat-grown stock.

I was much interested in three neat ranges of glass that I saw in Vermont recently, namely those of H. M. Totman at Randolph, George Emslie of Montpelier, and Will Emslie of Barre, the two latter operating as Emslie & Co. These florists away up in Vermont have a very pleasing little business and all seem to be doing their full share. They are getting good prices, in fact are doing so well that both firms are planning to increase their glass this season. I was surprised to hear these men say that the question of coal did not worry them much. They get all that they need each year and seem confident that they will be treated in the same manner this sea-

Orchids in Canada

Mr. Peacock Writes Entertainingly About the Industry's Development

I have just returned from the sale of the furniture and effects of my old friend Geo. Hansen who leaves next week to spend the rest of his days—leisurely and happily I trust—in the Eldorado of most Canadians, the State of California.

Hansen it was who came to Canada seventeen years ago, after having added to his early experience gained in Denmark, the land of his birth, by seven or eight years hard work in an establishment in the north of England where valley pips and orchids were grown in small quantities.

Bringing his wife and family of six young daughters with him, he settled down in Brampton, and in less than a week began forcing valley pips at the Dale Estate greenhouses here at a time when 12½ cents per hour was considered a high wage.

Nearly two million pips a year were planted in the sand by the hardy Dane, who stuck pluckily to the job for a couple of years before he complained of its monotony.

What are you dissatisfied with?" the manager enquired of him one day.

"I'm not growling", he replied, "but I miss my orchids. They were like friends to me. I'm fretting for them."

"Do you think you could grow orchids in this country?" he was asked.

"I know something about them Hansen replied, and I think they ought to flourish well in Canada. I like to see them about me".

Nothing but the promise to procure fifty plants for a trial prevented Hansen from quitting his job, and in due time the assortment arrived and was potted and hung up by wires swinging from the rafters above the valley benches.

Naturally the shrivelled up looking plants did not bloom for many months, and nearly all the rest of the local flower growers on the Estate showed little fondness for what they regarded as a foreigner's foible, until one day an Odontoglossum Grande was born—twins in fact—and the growers passing through the valley section stopped to ask "What the devil's that thing you've got there?"

The name befogged their interest and frightened them away, but the manager came out to share with Hansen the delight of studying the firstborn. A month elapsed and then

a few of the Cattleyas appeared and managed to evoke sufficient enthusiasm to warrant the purchase of 300 or more plants of different varieties.

The demand from the retail florists in Toronto, Ottawa and Montreal at that time was so slight that, although right from the beginning the plants bloomed vigorously, the conservative Canadian flower loving public fought shy of the "funny looking things" and at fifteen cents each the flowers were a drug in the market.

Then gradually one or two really daring (?) florists in those progressive cities made up their minds to order half a dozen blooms occasionally, and began to use them in their window decorations. Meanwhile it remained for the New York wholesalers to discover that orchids were being grown at the Dale Estate, and that the clear atmosphere and bright weather fostered the cultivation of the most desirable exotic known in their trade. Packed very carefully and covered with cotton batting and tissue, the perfect blooms arrived in the Metropolis the following morning after they were despatched without a speck or blemish upon them.

Buffalo, Cleveland, Detroit and Chicago are only a few of the cities in the U S. A. that now receive daily shipments of orchids from the Brampton greenhouses, where they are packed and shipped every morning with the most scrupulous care. Whether the temperature stands at 30 degrees below zero or 95 in the shade, the attention given both by the growers and the packers is a warranty that stands

for the perfect delivery of the delicate blooms in ninety nine cases out of every hundred.

From fifty plants the number in five years grew to five thousand, and today the collection amounts to over forty-four thousand plants, is regarded by connoisseurs as the most attractive in North America, comprising as it does several hundred varieties of fifty-one different species.

Many of the plants were well established when Hansen left the greenhouses nearly twelve years ago to take up out door work, since which time nearly all the credit due for having developed such a healthy lot of stock has fallen to the lot of Wm. Jones, an English specialist from Southampton, who with an able staff of old countrymen working under him became positively obsessed by his job.

For some years Jones was greatly discouraged because the Canadian public failed to appreciate the aristocrat among flowers as he himself did, and indeed there does seem something paradoxical in the fact that not until after the armistice was signed did Canadians begin to take kindly to the choice blooms and the elegant sprays that now cost them four times as much as in the good old days before the war.

W. G. PEACOCK.

Brampton, Ont.

The railroad situation which has caused much trouble to growers in the East has been felt almost equally as bad in the West. In California the strike interfered greatly with the shipping of flowers, especially violets intended for the East. It is said that many orders could not be filled, not for lack of flowers but because of transportation difficulties.

THE ST. MARTIN AGAIN A CHALLENGE

Will anyone make the following claims for any Strawberry and prove the claims:

A strawberry that has been awarded a Silver Medal and 9 Cash prizes for 6 consecutive years. St. Martin has done this.

A strawberry of equal size and quality that will carry more than 400 miles in good condition. St. Martin has done this.

A strawberry of equal size, color, and quality, that produces as large berries at the last picking as at the first. St. Martin does this year after year.

As to quality of plants, and care in packing, I receive daily commendations.

Certainly it would be a unique experiment

Color if a plan which is being talked of in St.

Advertising Louis should be carried out. This plan

calls for the painting of all trucks and delivery wagons the same color. The scheme also demands that the slogan, "Say it with Flowers," have a prominent place on each vehicle. If this plan should be agreed to by all the retailers, wholesalers and growers in and around the city, the national slogan would receive a great amount of publicity, and no doubt considerable talk would be aroused by the uniform appearance of the different trucks and wagons. A movement of this sort entered into in the proper spirit by all concerned would seem to have real advertising value.

It must have puzzled a good many people

Mothers' Day when they read in certain city papers

Again last Sunday a diatribe from Miss Anna

B. Jarvis against the use of flowers on

Mothers' Day and recommending the purchase of flags instead, because only a few years ago this same woman (She happens to be the lady from Philadelphia) was campaigning up and down the country for the establishment of this same Mothers' Day. In fact, it was Miss Jarvis who conceived the idea and first brought it to the notice of florists. It isn't necessary to go into a discussion of the reasons for the lady's right-about-face. Every florist who has been on the inside at all knows about the attitude which Miss Jarvis has taken as regards financial matters. The point is that little damage seems to have been done by her reversed attitude. Apparently she builded better than she knew. It is sometimes said that tearing down is easier

than building up, but it is difficult for one person to demolish a structure which is supported by the strong efforts of several hundreds of other people.

Some florists were worried by the article published in the papers, but the result seems to have been to the advantage of the trade rather than otherwise, because it has created a certain amount of discussion and furthermore served to arouse many florists from their apathetic condition so far as the day was concerned, creating in them a desire to help along the advertising campaign of the more active members of the trade.

It is a question among many florists as to whether the sales are increased enough on Mothers' Day to make any marked showing on the ledger, for there is usually a well defined reaction afterwards. Nevertheless, the occasion is one which carries a large amount of sentiment, and for that reason makes it possible for florists everywhere to do effective publicity work and help to win a larger amount of the public's business every day in the year.

It is a matter of congratulation that the

The Growers' growers of the country are responding

Problems so whole-heartedly to Mr. Ammann's

work or organization. It is by no means

an easy task to bring together the different elements which are always to be found among any large number of growers. Even at the best there are some who will not be in sympathy with a progressive movement of this kind and who cannot be counted upon to give of their assistance. This fact must be considered and reckoned with.

On the whole, however, there seems to be a commendable recognition of the value of co-operation and especially with the plan which Mr. Ammann has so carefully worked out and which he so thoughtfully presents wherever he goes.

A new branch has just been started in Illinois with excellent prospects, and the last meeting of the Boston Branch showed that the growers of Greater Boston are prepared to do their part with the expectation that they will reap bountifully in the end. While the growers in the immediate vicinity of Boston have been most active, there is no reason why all of those throughout Eastern New England should not have a place in the organization.

As a matter of fact, there has never yet been a proper getting-together of either retail florists or growers throughout the New England States, and this organization affords one of the best opportunities which has yet been found to unify the New England interests, and in that way build up the field. The fact is that New England has lagged a little behind the Middle West. There ought to be a more united spirit between growers close to the cities and those at a distance. As it is, the latter often chafe that they are discriminated against in the market.

In our opinion, the full success of the Growers' Associations as being developed in the New England field will lie in getting in every grower, no matter whether his establishment is within a 15 mile radius of Boston or whether it is in Concord, N. H., or Bangor, Me. We hope that the broader view will be taken by the new officers, and we believe that it will be, because they are known to be men of vision and favoring a broad-gauge policy, as well as being business men of acumen and progressiveness. The florists are approaching an era when they will need all the benefits of co-operation and mutual helpfulness. Within the next few years they will pass through a financial and business situation such as has never before been encountered, and the more thoroughly they are prepared to meet it, the better off they will be.

BOSTON

The Flower Shop on Huntington avenue, near the corner of Massachusetts avenue, conducted for the past few years by Mr. Petros, has been purchased by Maurice M. Saunders, for 14 years with Wax Bros., and Samuel Einstein, for 5 years with the same concern. It will be called from now on the Symphony Flower Shop, and with its central location and good quarters should become a prominent feature of the Back Bay. Both Mr. Saunders and Mr. Einstein are men of long experience and no little energy. They expect to join the Florists' Telegraph Delivery Association immediately, and judging from the plans which they are outlining, will be prepared for a big business in the future.

Quite a few of the florists around Boston made a very pleasant trip to Saugus last week to assist William Sim in taking his third Masonic degree. Mr. Frank Edgar was extended the courtesy of occupying the chair of Master during the working of the degree on Mr. Sim, by the Master of Mr. Sim's lodge. Messrs. Cartwright, Gibbs and Reuter also assisted. Besides these, who did their part in the working of the degree, there were quite a number of florists present.

NEW ENGLAND.

The Halifax Gardens Co. is fortunate in securing the services of Mr. Eber Holmes, who is to be superintendent of their greenhouses and other property at Halifax, Mass. Mr. Holmes is a grower of excellent reputation and has shown the best of results as a rose grower in particular. For several years he has been employed by Mark Aitken of Springfield. The trade around Boston will welcome Mr. Holmes again in their midst, and he returns with the best wishes of everyone.

Many improvements have been made in the store of Jos. G. Leikens at Newport, R. I. The interior is being wholly redecorated and the plans call for a lattice work effect which will be most striking. A sunken garden is to be a feature of the establishment.

Ernest Coe, president of the Elm City Nursery at New Haven, Conn., recently lectured in Plymouth Church House in that city on Gardening Inspiration.

GENERAL NEWS NOTES.

Miss Gertrude Loveless, of Warren, Ohio, has disposed of her greenhouses and after this will carry on a flower business in only a small way.

It is said that Tennessee and other Southern peony growers are anticipating a very large crop this year and are expecting to have it ready early enough for Mothers' Day. Report has it that the Gould Nurseries at Halls, Tenn., will have over 125,000 blooms ready.

The M. G. Madsen Seed Co., of Manitowoc, Wis., has increased its seed farm by the purchase of a 40-acre plot near its greenhouses. It is understood that it will be used mostly for the growing of bulbs and nursery stock.

John H. Giles, a well known florist of Reading, Pa., died recently after a long illness.

JOHN P. RICE HONORED.

Geneva, N. Y., April 20—John P. Rice of the Rice Brothers Nursery Company, is the new president of Geneva Chamber of Commerce. Mr. Rice was elected at a meeting of the new board of directors. Mr. Rice, is one of Geneva's self-made men. He began life a poor boy, working in the nursery and later with his father engaged in a small nursery business under the firm name of J. P. Rice & Sons, T. W. Rice being the other brother and partner. Later the business was dissolved and reorganized under the name of Rice Brothers Company, with J. P. Rice as president. Today the Rice Brothers Company has under cultivation nearly one thousand acres in nursery stock. Their farms are in Seneca, Yates, Wayne and Ontario counties.

**Flowers Under
Glass**

With such a cold spring as we have been having it is a mistake to get the asters out too soon. With the raw, cold winds that often characterize this season, little plants are in danger of being blighted or stunted. While it is perfectly safe to set out plants that are in pots or those which have been transplanted on a sunny day, a cloudy although warm day should be chosen for setting out those which come directly from the seed bed. Many authorities agree that the finest asters are raised on light sandy soils but those which have been heavily fertilized the previous season. There is no better way to get the land prepared for asters than to manure it and plow it deeply the fall before. If extra fertilizer is needed it may be given in the form of bone meal or wood ashes well worked into the soil.

Rambler roses designed for Memorial Day should be forced sufficiently to have the flowers out four or five days ahead. Then they can be moved into cooler quarters to harden them up, often a decided advantage. Roses which have been held back for Memorial Day trade should be brought into heat by the middle of the month, giving them from 60 to 65 degrees at night. On clear days they should have a good syringing in the morning so that the foliage will be thoroughly dampened. Of course they must be well watered at the roots, too. When the buds are seen to be breaking it is best to lower the temperature to 58 at night, keeping it there until the flower buds appear. When the buds are well developed weekly applications of manure water will help to push them along. It is a common mistake to have the plants standing too close together. The wise grower takes every precaution to avoid mildew and keep the green fly in check, which means regular attention to fumigating and ventilation.

Many growers and florists find a sale for hardy plants, especially climbers, late in the spring. There are always customers, for example, for Ampelopsis Veitchii, Clematis paniculata, Clematis Jackmanni, Honey-

suckles and climbing roses. In some sections the Moonflower and Cobea scandens started from seed sell readily. Seeds of the hardy perennials may be sown to advantage now. It is really much better to start them now than to wait until later. You can use either a cold frame or well prepared beds in the open ground, the former being preferable. Have your roses three or four inches apart and remember the standing rule that seeds should be covered about three times their own depth.

Plantings of gladioli can be continued from now until the end of June. You will get good results by planting them in rows two or three feet apart, with three or four inches between the bulbs. Have them at least four inches deep. Shallow planting is a common mistake. If you plant the bulbs at intervals of two weeks, you will have a long, continuous season although it is well to remember that the mid-summer sale of gladioli is seldom very remunerative. Deep working of the soil is necessary in order to develop good plants, and if the season should prove dry, watering freely will be necessary. Many growers find it pays to sort the corms over when they start planting, putting in the small ones first and leaving the largest for the last.

The old peony plantations which have been yielding well should be given a top dressing of old manure worked into the soil, and if the weather becomes dry while the buds are being formed or the flowers coloring up, water should be given in generous supply. Although the growing of peonies is largely a matter for specialists, a great many plantmen find that they can at least supply a local trade from their own grounds, and the demand for peonies is very constant. To get good flowers you must have soil that has been worked to a depth of nearly two feet, and the additions of bone meal and wood ashes helps to give highly colored flowers.

DON'T BUY COAL YET

A Dealer's Advice to Flower Growers of Boston

An enthusiastic and largely attended meeting of the Eastern Mass. branch of the newly-organized Flower Growers' Association was held a week ago. Mr. George Elliott of Brighton presided and outlined the purposes of the association. He then introduced Mr. Finnegan of the Thomas J. McCue Company of Watertown. This is a coal company with a very large business and has been very friendly to the florists and market gardeners in the past.

Mr. Finnegan spoke on the coal situation as it affects florists. He said that in his opinion it would be better to wait three or four weeks before buying coal. He believed that the price, which is now very high, would drop considerably. He said that at the present time the freight embargoes together with the piled-up orders had worked together to push the price up, but when more normal conditions were restored, there would be a drop. He believed that there would be no difficulty in securing all the coal that the florists might need this season, although possibly they might not get the highest grades.

Mr. Finnegan went on to explain that the government had established what are called pools, taking in different grades of coal. The best pools he said, were those numbered 1, 9, 10 and 21. These were lightest in ash and contained the greatest number of heat units. They were worth buying even at a little higher price than the other kinds. Mr. Finnegan's talk was greatly appreciated by the growers present.

Permanent organization was then effected, the following officers being elected: President, W. C. Stickel; vice-presidents, Thomas Roland, Samuel Goddard, William Sim; secretary, Geo. Elliott; treasurer, Frank Edgar; directors, Herman Bartsch, George Butterworth, Andrew Christensen, Peter Fisher and E. Allan Peirce. It was voted that meetings be held the third Saturday of every month.

Boston is the third city to complete its organization. The Association started in Chicago, and St. Louis secured the second charter of the National body. The territory embraced by the Eastern Massachusetts district includes Worcester and points East in New England; thus Rhode Island, Maine and New Hampshire growers will unite with those of Eastern Massachusetts.

Horticultural Sundries

166 W. 23rd St., NEW YORK

At a meeting of the executive committee of the New Bedford, Mass. Horticultural Society, it was decided to hold four flower shows this year, viz.:

Peony Show—June 16th and 17th.

Rose Show—June 23d and 24th.

Gladioli Show—Aug. 18th and 19th.

Dahlia Show—Sept. 29th and 30th.

A marriage engagement recently announced, is that of Miss Sarah Clark, one of the popular Springfield, Mass., florists, and Paul B. Wildey, a graduate of New Hampshire State college, who saw two years of foreign service in the United States navy, and is now connected with the N. K. Fairbanks company of Boston. The wedding is to take place in June.

CHECKING UP RESULTS.

One Florist Analyzes the "Say it with Flowers" Campaign.

While the florists of this country are using their energies in raising money to finance an advertising campaign, they should analyze the benefits and check up the results once in a while. The price that flowers sold for last fall seems to leave a question of whether "Say it with flowers" is bringing the desired effect on the business in general. Chrysanthemums, roses, carnations and other flowers fell into the same slump that they did before the cost of production reached its present scale and it seems reasonable to expect that such conditions will continue.

For an example: when Omega Oil was first put on the market it was advertised extensively in every street car and magazine. It told a story about Mr. and Mrs. Goose and their escapades. This product is made from goose flesh, hence the connection. The result was that they spent a fortune without getting the desired results. Why? They were not advertising Omega oil but Mr. and Mrs. Goose. They then changed their plan of attack and advertised sprained arms, swollen faces, headaches, etc., and the campaign was successful.

When Force was first manufactured there was a story in their advertising about Jim Dumps and Sunny Jim, with a verse of poetry to go with it. After a year or so the manufacturers were not satisfied with results and after a close scouting of their campaign they came to the conclusion that they were advertising Jim Dumps and Sunny Jim instead of Force, and changed their plans accordingly with good results.

Now we florists should take stock and analyze the results of our advertising campaign to make sure that we are hitting the nail squarely on the head.

Another good example can be gathered from the fact that Boston firms which specialize in linens are not advertising that commodity at the present time. Why? Because linens are scarce and they can sell them any way, whereas if they were plentiful they would advertise them. There is food for thought in that fact.

In our business we advertise extensively with chrysanthemums at Thanksgiving, and plants for Christmas and Easter and Decoration Day. Before "Say it with flowers" was invented there was always a big demand at those times because flower buyers naturally bought them then. We should not only continue to advertise

at those seasons but also make the most of the big opportunity afforded us in creating a demand for the days between those special seasons. When flowers and plants are plentiful we should let everybody know it and turn on full pressure in creating that demand. Large dry goods establishments often get a delayed shipment of clothing out of season, when there is no natural demand for it. They don't put such stock on a shelf and find fault with their business. No! They put a big "ad" in the papers telling everyone who reads how fortunate they are to get the stock at such a time and how glad they are to be able to let their patrons have the advantage of buying a good article at a reduced price. The point is this. By such means they can sell the stock at a profit and get it out of their way. If they didn't advertise so extensively the chances are it would not be sold until the following season and at a much lower price. By getting rid of it they can handle much more merchandize in the same space. Now that method can be applied to our business very readily. When flowers are good and plentiful, instead of sitting on our haunches and letting our product accumulate and go to waste, why can't we advertise and put one of those flowery "ads" in local papers, telling the flower-buying public that owing to the warm weather, or whatever the cause may be, flowers were never more plentiful or more beautiful and fragrant, and that we are glad to be able to offer them at most attractive prices, specifying the size, name and price of each article. While we would not get holiday prices, we would get double what we are getting between seasons now, and it would mean that instead

of the grower getting \$1.50 or \$2 per hundred for Carnations, as was the case during October and the early part of November last year, he would get \$4 per hundred, and the retailer would profit likewise.

There is a large gap to be filled in our business from Christmas to Easter. Of course the first thought is that stock is generally scarce then, but be that as it may, growers would be alert to having flowering plants to offer if the demand ever warranted it, and a big demand can surely be created by judicious advertising.

People are willing and ready to pay an advanced price for our products, the same as they are doing for everything else, but we must be very careful to keep the quality up to normal. Here is an incident that should be eliminated from the business, and as it happened to a friend of the writer it made a deep impression. The friend in question wanted to present his wife with a dozen carnations for her birthday, knowing that she was very fond of flowers and that they would be more acceptable than anything else, he could buy. He went to a flower shop and inquired the price, which was \$2 a dozen. Were they perfectly fresh? "Oh, yes." He bought a dozen and when he got home stealthily hid them in the cellar where it was cool that they might keep in perfect condition for the grand presentation the following morning. Imagine his chagrin and disappointment when on getting the flowers for the big surprise he found four of them had gone to sleep. Such an occurrence should be discouraged, to say the least, as it gives our business a bad taste.

(Continued on page 381)

RAMBLING OBSERVATIONS OF A ROVING GARDENER

Apparently we shall have to revise some of our remarks about the hardiness of *Euonymus radicans* vegetus. Many large plants are seen to have suffered very severely the past winter. One or two large specimens in which I have long taken delight are now brown and apparently half dead. I do not think, though, that the cold weather was responsible so much as the reflection of the sun on the snow for weeks at a time. In other words, the foliage seems to have been burned, and it is quite probable that many winters will elapse before the same trouble will be experienced again, at least to so great an extent. Probably the plants might have been in good shape by covering them with burlap or in some other way protecting them from the sun's rays reflected on the snow. Plants which I have found growing in sheltered places do not seem to have experienced any injury.

We are perfectly safe, I think, in still maintaining that this *Euonymus* is entirely hardy in New England.

Seldom, it seems to me, have I found wider interest in roses. Doubtless this is partly due to the efforts of the American Rose Society, but so much has been written of late about roses, and especially the newer varieties, that the public has become interested in them more than ever before. I am sure that the garden clubs and similar organizations which are being formed all over the country have something to do with the matter. Dr. Mills of the Syracuse Rose Society, is one man who has been responsible for arousing the enthusiasm of flower lovers by the score, and other men who are continually writing and talking about roses keep them in the public eye. It is sad to have a report from Portland, Oregon, that the win-

ter has played havoc with the roses there. It is stated that the cold weather has ruined most of the rose trees, killed back a large proportion of the climbing roses, and badly damaged the rose hedges along the streets. This will be a great disappointment to Portland people, as it will naturally interfere with the success of this season's rose festival which it had been planned to make rather more notable than usual. It will be interesting to have a report from the test garden showing just how the newer roses have gone through the cold weather.

Apparently New England escaped more lightly the past winter than many other sections of the country where the temperature is not supposed to run quite so low. Comparatively little damage seems to have been done to rhododendrons, azaleas and coniferous evergreens. Certainly the loss in the Arnold Arboretum was very small, especially when compared with that of two years ago. From other parts of the country, however, come reports of heavy losses. It appears that the gardens around Phila-

Magnolias at Rochester, N. Y.

delphia suffered very severely, many of the finest rhododendrons being lost. Much damage was also done, it seems, around New York city and Long Island, evergreens of different kinds being the worst sufferers.

This, of course, is apart from the loss occasioned by mice. Considerable damage was done in New England by these pests, both on private estates and in nurseries. On the whole, however, New England seems to have fared better than many other parts of the country.

The 1920 edition of Robert Pyle's little book published by the Conard & Jones Co., of West Grove, Pa., on "How to Grow Roses," has just come into my hands and I feel is worthy of an appreciative paragraph. While not undertaking to do what the Rose Annual accomplishes, it yet contains a

vast amount of valuable information from all parts of the country which will be prized by amateurs and professionals alike. One feature which I like is a page given to synonymous names of roses. It is not surprising that there is an embarrassing duplication when the same rose has distinct names in different catalogues. The selections of roses for special sections of the United States is also a valuable feature, although one which no doubt can be elaborated to a greater extent. I think, in fact, that the editor of the Rose Annual has some such plan in view. The discussion of roses for different purposes is helpful and the article on pruning and winter protection should solve many problems for the novice. Among the excellent illustrations in color are Baby Dorothy, Rosa Hugonis, Bridesmaid, Rosa Rugosa and Tausendschon.

I have been impressed this season with the value of magnolias for city planting. In Back Bay, Boston, many of the small front yards are adorned with these handsome trees and when they first appear in a backward season like this, they add a splendid note of color to the otherwise drab and dreary streets. They seem to flourish well under city conditions, and beginning with magnolia stellata and going through the other early species, give a display lasting several weeks. Probably nowhere in the country has a better street display been made of magnolias than in Rochester, N. Y., the subject of the illustration on the previous page. There they are a joy to all beholders every spring.

EMBARRASSING EMBARGOES

Boston florists and shippers of plants have been greatly handicapped by the railroad difficulties, especially by temporary embargoes. Each railroad seems to have its own system and the embargoes go on and off so rapidly that it is hard to follow them. For the last week there has been a flat embargo from the South Station to Cleveland for example, while from the North Station to Cleveland there has been an embargo on everything excepting perishable goods. By using the North Station, therefore, it is possible to get through plants and flowers, while they could not go at all from the South Station. All the members of the trade are hoping that this situation will soon ease up.

SOWING ANNUAL SEEDS.

It is now safe to sow practically all annuals out of doors, and, provided the ground was well prepared during the winter or spring, it will now be fit for sowing. To obtain the best results, the soil must be well broken down, the seeds sown thinly, and lightly covered with fine soil. Annuals are frequently sown and grown too thickly. The seedlings should be thinned as soon as large enough to handle, and again when the young plants have covered the ground, eventually leaving them from 4 inches to 1 foot apart, according to the kind or variety.

If old Laghupatanaka that light flier commonly known as the crow should still be flying over the banks of the Janhavee which we now call the Ganges he will no doubt be surprised to see some strange things appearing these days originating from the far off Occident. For instance we learn from a news item that the Princes of Calcutta, who follow the noble art of gardening under the benign influence of Saraswatee the goddess of the fine arts had a flower show in that ancient Oriental city February 20 and 21 last. Among the flowers exhibited there was a wide variety covering "all classes" and special mention is given to the beautiful displays of petunias, larkspurs, and antirrhinums. Among the vegetables exhibited were very fine specimens of Sutton's Marrowfat peas which we are informed grow well even in the plains of Hindustan and were of superior size and quality. Kohl Rabi, turnips, tomatoes, cauliflowers, carrots, beets and beans were there, and as for cabbages they had Pride of India and Eclipse Drumhead that called for loud acclaim—one specimen of the latter being fourteen inches across the head and twenty-two pounds in weight. This show we understand was held in celebration of the centenary of the Calcutta Agricultural and Horticultural Society. It will rather surprise some folks in Boston and Philadelphia that there was a horticultural society in the effete East a hundred years ago; but it is probably to be credited to the early British settlers and we have to take our hats off to them. Do we hear old Laghupatanaka ask "Is civilization a failure. Or is the Caucasian played out?" Perish the thought.

The dream of the ardent enthusiasts in the flower world is raising something better than anybody else does. How we all glory in that dream until we run up against the efficiency experts. They douse you at once with facts and figures and tables showing costs and costs and costs and nothing to show for it. Of course they are both right and both wrong but neither of them can see it. Only the wise and ancient Laghupatanaka, the crow, can look down on the everlasting struggle between the dreamer and the

digger and wink his solemn eye with equal credit to both which thought may console John Watson of the Nurserymen's Association who told the boys in Boston:

"If we say that price must be based on cost then we put out products on the same plane with bricks and mortar and shingles. Competition in cost and quantity-production leads inevitably to price competition and the sure result of that is deterioration in quality. I prefer to think of the better competition that is wholesome and inspiring, the effort to produce something better than anybody else can produce. If we reject the idea of merchandising at cost plus a profit on each article produced can we not claim something of the status of the artist. And may we not consider the matter of service an element in price making."

I never met John Watson but from the foregoing I can see that he has a soul and that he realizes that digging for dollars is not the alpha and omega of our short sojourn here in this jolly old world. Which makes me wonder why he quotes as a sage that Indiana golden-rod George Ade thusly:

"It doesn't signify how long you stick around; it's what you put across that counts."

That's the slogan of the safe-breaker, the sheep-stealer, chicken-thief, the cut throat, the liar, the breaker of the whole bunch of the ten commandments handed down to Moses by the Almighty. Its the slogan of the devil and from all accounts that lad finds the atmosphere of Indiana a congenial medium if we may judge from many things that have emanated from there. Did the Veitch's put anything across

when they sent E. H. Wilson into the wilds of Asia? The Veitch's are out of business for years and yet the world is just beginning to enthuse on Rosa hugonis and lots of other things that these poor old "stick arounds" have given us with nothing to show from our side of the ledger.

Put across your grandmother! I don't care what you put across. Its what you try to do that's fine and beautiful and uplifting that counts! If you're struggling in the right direction no matter how often you stumble, no matter if you never reach your ideals, you have done what you could with a glorious goal for your ideal, if you keep on "sticking around" with your eyes straight heavenward instead of slobbering around in the mud like a hippopotamus. That's the big thing. But of course don't forget "to keep your powder dry." When the wise army general said that, I am sure old Laghupatanaka, the crow, must have given him a wig wag to temper his mad rush on to victory or death. And also to watch out for the "stupidity" of the Iris.

We have to thank Brother Sturtevant for the idea that there is such a thing as "stupidity" in a plant. If that be true about an iris, why can't it be true about a rose? Listen to this from Alexander B. Scott in the Rose Annual:

"I reached my ideal last year in a crimson-scarlet. I looked at that new rose of mine last year and considered it my ideal of a perfect scarlet-crimson rose. I propagated four plants from it and now this year—the *blamed thing won't grow.*"

The italics are ours. And might we suggest a-la-Sturtevant that the reason

DREER'S "Riverton Special" Plant Tubs

No.	Diam.	Ea.	Doz.	100
10	20 in.	\$4.50	\$49.50	\$375.00
20	18 in.	3.30	36.00	293.00
30	16 in.	2.35	26.00	200.00
40	14 in.	1.90	21.50	170.00
50	12 in.	1.30	15.00	115.00
60	10 in.	.90	9.90	77.50
70	8 in.	.75	8.00	61.00

The Riverton Tub is sold exclusively by us, and is the best ever introduced. The neatest, lightest, and cheapest. Painted green and bound with electric-welded hoops. The four largest sizes are equipped with drop handles.

was "stupidity" in the parents. Which reminds us of William Kleinheinz's definition of the reason why Dennis Connor (at the other end of the boat) couldn't catch any fish—while the smart William was hauling them in good and plenty. "Pure dumbness" said he "nothing in the world but just pure dumbness"!

Isn't this lad real modest in his desire for a better rose:

"We need a red rose like Hadley in color, form of flower and fragrance; with the habit and growth of Shawyer, and the keeping qualities of Columbia." Some order that! And if the ardent hybridizers ever manage to give him what he wants, ten to one his ambition will begin to soar to still loftier heights. Rah for the end of the Rain-bow!

"A hundred million cut roses" is an excellent title, but there is really more meat in it than a story of mere quantity. Don't miss reading that article in the Annual. It is full of good things and worth reading twice at least.

Recent visitors include H. Mathers, Everett B. Clarke & Co., Milford, Conn.; Harry McNaughton, Sterling & Graham, Masontown, Pa.; Newell J. Hayman, Hayman Floral Co., Clarksburg, W. Va.; Frank E. Miller, J. H. Small & Sons, Washington, and John H. Hasson, Atlantic City.

CHECKING UP RESULTS.

(Continued from page 377)

"Say it with flowers," is a grand slogan and should be made to be as common as "57 varieties" but it is too wide in its scope. It conveys our business in a general way but it does not specify anything. For the sake of argument let us take the case of the California Orange Growers. They used to sell their product in such a way that on the Atlantic coast they could be bought sixteen for a quarter. Now they cost 75c to \$1 a dozen for best grades. They advertise in magazines, with colored pictures, how beneficial and healthful their oranges are, how to serve and eat them, and the fact that they were never as luscious as they are this year. The "ad" makes ones mouth water and thereby creates a demand. If they were to advertise a slogan "Eat Oranges!" it is a matter of conjecture what effect it would have on their business.

Our business has got to be run on the same lines as every other and while the margin of profit is liable to grow narrower, we can overcome that by increasing the demand and increasing our output per square foot.

Geo. H. Frazier, Mgr.

We have got to compete with every other business in the labor market, coal and the general increase in everything we use, and the only way we can do it successfully is by the strictest business methods and the efficient handling of help and stock. We waste a great deal of energy and labor. There is no getting aside of that fact, and it eats into the profit like wasting coal or anything else. Many florists think that so long as the help keeps busy that is all that is necessary, but it is the scientific end of our business that produces the goods. Inexperienced labor can be hired to shift plants around, but it is an expensive operation to use experienced help, who must be paid a good wage, to do such work. In the "good old days" that we hear so much about, a foreigner with no knowledge of our language who could shift most material with a wheelbarrow was a far greater asset to a green house place than an expert grower who did the ventilating, propagating, repotting and producing the stock that paid the bills. The "good old days" are gone forever let us hope, and with improved working conditions and efficient methods we can put the business where it belongs, and a man who elects to be a florist will be looked upon as a scientific person instead of a joke. The result will be that it will be an attraction for any young man to study the gentle art of growing plants and flowers. The business is still in its infancy, but isn't it about time it was learning to say something besides "Mama" and "Papa"? It should be getting old enough to be developing so we can see what it is going to be like when it gets full grown.

The inspiration for writing the above came from a pencil on which is printed "When you think of flowers, think of Penn," and with the hope that it will make us stop and find out if all our efforts are as effective as they should be.

Every Reader of "Horticulture" Needs

DR. L. H. BAILEY'S BRAND NEW Standard Cyclopedia of Horticulture

Six large quarto volumes. More than 3,600 pages. 24 full page exquisite color plates. 96 beautiful full page halftones. More than 4,000 text engravings. 500 Collaborators. Approximately 4,000 genera, 20,000 species and 40,000 plant names.

THE New Standard Cyclopedia of Horticulture has been freshly written in the light of the most recent research and experience. It is the fullest, the newest, the most authoritative of all works of its kind and constitutes the most conscientious attempt that has ever been made to compress the whole story of our horticultural thought, learning and achievement into one set of books. It is both an Encyclopedia and a Manual.

A Few of the Many Important New Features

Key to Identification of Plants This is a device to enable one to find the name of a plant. The name thus found is quickly referred to under its alphabetical location, where full information will be found in regard to it.

Synopsis of Plant Kingdom This is one of the most important features of the new edition. It constitutes a general running account of the classes, orders, and groups of plants, with a brief sketch or characterization of 215 of the leading families comprising those that yield practically all the cultivated plants. These family descriptions give the botanical characters; the number of genera and species and the ranges; a list of the important genera; brief statements in regard to the useful plants; and diagrammatic illustrations.

Illustrations There are 24 colored plates; 96 full page halftones; and more than 4,000 engravings which serve as guides in the text.

The Glossary This is an analysis of all technical terms that are used in the work and in similar works. It comprises botanical and horticultural terms with brief definitions.

Translation and Pronunciation of Latin Names In Volume 1 is inserted a list of between 2,000 and 3,000 Latin words used as species—names of plants, giving the English equivalent or translation and the pronunciation.

Class Articles Special effort has been made to secure the best cultural advices for the plants requiring peculiar or particular handling. Here are some of the titles of these articles: *Ants; Autumn Gardening; Bedding; Diseases; Drainage; Floral Designs; Formal Gardening; Hotbeds and Coldframes; Insects; Landscape Gardening; Lawn Planting; Orchards; Rock Gardening; Subtropical Gardening; Tools and Implements; Village Improvements; Window Boxes, etc.*

General Index The final volume contains a complete index to the entire work, enabling the reader to locate volume and page of any subject he has in mind.

The complete set of six volumes, bound in decorated buckram, will be delivered to you for only \$6 down and \$6 a month for 6 months, until the full amount of \$42 has been paid. Cash price \$41.

Further Particulars Sent on Request

HORTICULTURE, 78 Devonshire St., BOSTON, MASS.

Principles and Practice of Pruning

By M. G. KAINS

Lecturer on Horticulture, Columbia University

Few practices in the handling of plants, especially fruit bearing plants, attract so much interest as do those of pruning. The methods are so varied, the results so diverse, and the opinions of growers so apparently contradictory that this subject is always one of the most interesting, and the surest to hold attention and arouse discussion.

Particularly during the last ten or fifteen years when the principles of plant physiology have been more and more satisfactorily applied to plant production and management has interest settled in pruning. During the latter half of this time also more and more investigations and tests have been conducted by experiment stations and other workers to test out methods and principles in the interest of science and for the benefit of growers. The accumulation of such new knowledge has become very considerable especially in the last decade, but it is necessarily so scattered that very few growers have access to it, hence the demand for a book, which shall present the really important features of these investigations as well as set forth the fundamental principles based upon the laws of plant growth.

This volume is lavishly illustrated mainly by actual photographs of specimens which show good and bad practices. The author has spared neither time nor expense in gathering his photographs, each one of which tells its story.

After a few pages of introduction the author discusses Plant Physiology as related to pruning. A chapter takes up the Philosophy of Pruning, itself a very interesting subject. Then follows a classification and clear discussion of Buds, very fully illustrated from life. How Wounds Heal is an exceedingly interesting chapter, as are also those on Prevention and Repair of Mechanical Injuries, Pruning Nursery Stock, Young Trees, Mature Trees and Odd Methods of Pruning and Training, Rejuvenating Neglected Trees and Practical Tree Surgery.

Profusely illustrated. 400 pages. 5½ x 8 inches.

Cloth. Net, \$2.00.

Plant Propagation, Greenhouse and Nursery Practice

By M. G. KAINS

We have had many inquiries from time to time for a reliable and up-to-date book on plant propagation, but were always at a loss to find any publication that we could recommend. The subject has been dealt with in fragmentary manner only in books that have come to our notice. So it is well that this new work has been issued, especially as it is both comprehensive and practical, and it should meet with a ready sale among plantmen, nurserymen and gardeners. There are nineteen chapters covering in detail topics of germination and longevity of seeds, propagating by buds, layering, cuttings, grafting, etc., fruit tree stocks, scions, etc., and there are eight pages of condensed cultural instructions in tabulated form, covering annuals and perennials from seed, woody plants, evergreens, vines, bulbs and tubers, greenhouse and house plants, ferns, palms, water plants, orchids and cacti. The illustrations are numerous, comprising 213 figures and halftone plates. There are 322 pages well bound and on heavy paper, teeming with helpful information. It is a book which no cultivator can afford to do without. It is worth many times its price. Copies can be supplied from the office of **HORTICULTURE** at publisher's price, \$2.00.

FERNS

THE VICTORY FERN (*Nephrolepis victoria*)

We take pleasure in offering this new and valuable variety of *Nephrolepis*. It is a beautifully crested form of "Teddy, Jr." with fronds frequently subdivided on the ends, making a most unique, distinct, and desirable variety.

This fern was

AWARDED A BRONZE MEDAL

at the S. A. F. Convention at Detroit in August, 1919. The judges of the award reported as follows: "Special stress is laid on the new fern Victory, with a rapid growth and a branching at end of fronds, making it a shapely plant. It should be a commercial success, and we **RECOMMEND IT MOST HIGHLY.**"

Strong plants, 2½-inch pots, ... \$3.00 per dozen, \$20.00 per 100

MOTHER'S DAY

The trade throughout the country was much surprised, judging from the correspondence reaching our Promotion Bureau over a despatch dated from Washington, and emanating from the Mother's Day International Association, of which Miss Anna Jarvis is the head, to the effect that flags should be used rather than flowers on Mother's Day, owing to the high prices charged by florists for flowers on the occasion. Charges were made that the florists were profiteering.

One of the New York papers went further, quoting an interview with a misinformed prelate, at which it was declared that so many carnations had already been bought up as to make it impossible to purchase them except at exorbitant prices, one dollar per flower being the amount named.

The Mother's Day International Association also sent propaganda to newspapers individually, of which the following received from a prominent metropolitan newspaper in Massachusetts is a copy:

"City Editor.

"Dear Sir:—One of our slogans this year is 'Do not buy flowers for Mother's Day, but help us to stop florists' Mother's Day profiteering.'

"Will you help us to stop this graft, obliging.

'MOTHER'S DAY INTNL. ASSN.'

In addition to all this, the following letter was received at the Secretary's office:

MOTHER'S DAY

International Association, Inc.

(Miss) Anna Jarvis, President.

Philadelphia, May 1, 1920.

Mr. John Young, Secretary, and S. A. F. and O. H., 43 West 18th St., New York City.

Gentlemen:—This is notice to the Society of American Florists and Ornamental Horticulturists, and all concerned, that you are infringing on the trade marks and copyrights of the Mother's Day International Association, Inc., and Anna Jarvis, both of Philadelphia, through the use and sale of florists' supplies and printed matter bearing the words "Mother's Day" and the white carnation, etc.

It is also notice to each and all of you to at once discontinue these infringements, or we shall proceed against you to the full limit.

public as to our emblem, and through infringements, and now in addition to the profiteering of years past, you have entered upon a new line of trade for the purpose of further profiteering, and free advertising.

It is not believed that florists generally understand facts as they exist against Mother's Day, through the propaganda of some persons at the head of your Society. We do not believe many florists have contributed to the S. A. F. and O. H. money to be used to misrepresent facts regarding Mother's Day, or to annoy the Mother's Day Association and interfere with the welfare of its work, or for litigation or for other expenses for which their money has been spent in some ways. It is our purpose to investigate if contributions to your Bureau were for these purposes, and for infringements upon moral and legal trade rights which are recognized as dishonorable in all lines of business.

To us it seems a small matter for your Society to have proceeded against Mother's Day welfare in the way it has through some of its representatives, in order to sell a parcel of posterettes and posters, and similar stuff through infringements. We asked you to have a better understanding, but you refused.

It is hoped that any other movement considering the use of flowers will profit by our unfortunate experience, annoyance and expense. We shall certainly not hesitate to protect any we can.

Trusting we may have a prompt assurance of your discontinuance of your infringements, we are,

Respectfully,

Anna Jarvis (Signed) and
MOTHER'S DAY INTERNATIONAL
ASSOC., INC.

The secretary then wrote the following letter to the Associated Press, addressing it to their general office in New York:

May 6th, 1920

The Associated Press, 51 Chambers
Street, New York City:

Gentlemen—Referring to the item in the enclosed clipping, which evidently is from a press report sent out from Washington, also in the more extended form copied in the advertisement also enclosed, I take the liberty, in behalf of the florists of this country, of declaring the charges to be without foundation, and the statements as absolutely untrue, and injurious to those engaged in the florists' industry.

I am also enclosing a copy of a letter purporting to be issued by Miss Jarvis and the Mother's Day International Association, which may be considered as bearing on the case.

A copy of the poster complained of is enclosed in addition.

First of all, Miss Jarvis is justly recognized as the founder of Mother's Day, or at least as one who has revived an old English custom, recorded by Chambers as "a practice of going to see parents, and especially the fe-

male one, on the mid-Sunday of Lent, taking for them some little present, such as a cake or a trinket." A youth engaged in this amiable act of duty was said to "go a-mothering," and the day itself came to be called "Mothering Day."

gress, is a joint resolution designating the second Sunday in May as Mother's Day, and for other purposes. Governors of States and Mayors of Cities have, by proclamations, endorsed the action of Congress, and the day is now very generally observed by the American public as one on which homage is to be paid to mothers living, and honor accorded to the memory of mothers dead.

"So much for Miss Jarvis' claim of proprietorship in Mother's Day. As a little inside history, it may be mentioned that Miss Jarvis solicited the aid of different florists' organizations at the outset of her efforts to create interest in the day. As a result, the Society of American Florists gave her a cheque for \$100 to be used in any way she saw fit in the promotion of her ideas. The society further collected subscriptions from individual florists throughout the country amounting altogether to \$1,000, which sum was also turned over to her.

As to the charge that florists have been profiteering, I would say that this is baseless. One dollar apiece for carnations is absurd. If such a price ever was received, it certainly was not at a florists' establishment. At a charity fair, perhaps, five dollars apiece might willingly be paid. White carnations are never sufficient for the demand on Mother's Day, for the reason that florists who grow them must, necessarily, take the remaining 364 days in the year into consideration, days on which white flowers are in very small demand. Miss Jarvis never could seem to understand this, and her misunderstanding was the cause of an abatement in the support given her by the florists. With the exception of white carnations, governed by the law of supply and demand, just as other commodities are, flowers for Mothers'

Day are just as reasonable in price as on other days at the same season, and there is not the slightest justification for Miss Jarvis' message, the publication of which she has foisted on the evidently unsuspecting press.

If you can help to contradict the statement complained of, your assistance will be highly appreciated by our society."

JOHN YOUNG, Sec.
 Secretary.

The Associated Press very courteously took action in the matter, as will be seen by their letter in reply. "Mr. John Young, Society of American Florists, 43 West 18th Street, New York City:

Dear Mr. Young—I enclose a copy of an Associated Press Despatch from Washington today which gives a denial by W. F. Gude of the statement of Miss Anna Jarvis, concerning which you wrote under date of May 6. This meets the point raised in your letter. Very truly yours,

(Signed) HAROLD MARTIN,
 Superintendent."

The despatch referred to was as follows:

"Washington, May 7.—Acting for the Society of American Florists, W. F. Gude, its Washington representative, has issued a denial of the statement by Miss Anna Jarvis, president of the Mothers' Day Association that florists profiteered in white carnations, the symbol of observance of Mothers' Day, last year, Miss Jarvis had called on observers of the day this year to abandon the carnation and display American flags.

All members of the society, throughout the country, Mr. Gude said, have been urged to sell white carnations, at the usual market rate on Mothers' Day, Sunday, May 9.

As to the charges of infringement of copyrights, etc., they may safely be ignored. Mothers' Day is a public day, and so declared by Congress, therefore our Publicity Committee do not feel that they need have any further concern in the matter.

Further Help Needed

The Publicity Campaign is swinging along, and our slogan, "Say it with Flowers," is daily becoming stronger in its effect on the public. Arrangements have been completed whereby a series of advertisements will be run in the national magazines during June, July, August and September, to keep the slogan before as many people as possible in a continuous manner. The copy to be used is very attractive, and should achieve the result aimed for. Among the magazines selected are the following: Literary Digest, Collier's Weekly, Outlook, Independent, Life, Judge, Scientific American, Leslie's and Argosy."

The committee are still very much hampered in their work through the want of proper financial support. It is regrettable that so much they would like to do is impossible because the necessary amount of money is not forthcoming. They are obliged to work on the installment plan, which impairs maximum results. Mothers' Day was productive of a splendid business, much of which undoubtedly was due to splendid campaign work. Would it not be a good idea, Mr. Nonsubscriber, to show a little appreciation of what has been accomplished for you and the trade by sending in that long delayed subscription to the fund that makes the benefit we all enjoy possible?

JOHN YOUNG, Sec.

43 West 18th Street, New York City.

HORTICULTURE

Vol. XXXI

MAY 15, 1920

No. 20

THE TALK OF THE TRADE

For the past few days Mothers' Day has been the principal topic of conversation in the trade. If Miss Jarvis really believed that she was going to turn the public away from buying flowers for this day, she evidently has been sadly mistaken. There is an old saying to the effect that it is much easier to start something than to stop it, and this applies in this case.

I have not had the opportunity of observing nor have I heard anything definite regarding conditions in any other cities or towns, excepting Boston. Possibly I am mistaken, but from my own observations on the streets Sunday, I would say that there were more flowers worn than I have ever seen before. There is a most wonderful opportunity for the florists to continue this day as one of the good days in the flower business. I can't help thinking, however, that it will not be possible to get the full benefit from this day unless we are very careful about prices charged. This seems to be a time when we can hardly go back at the retailer and say he is responsible for big prices. The wholesale market went away up in the air, and the retailers were obliged to pay prices which would not permit them to sell at a figure that would meet with the approval of the public in a general way. I was interested enough to walk into some of the middle class stores Sunday morning and listen to the comments of the customers who called, and I can tell you that I would not like to be in the position of some of these proprietors and take the abuse and sour looks they received when they stated the price for carnations.

I expect to be criticized for the statement I am about to make. Possibly I am entirely wrong, but I cannot get away from the idea that 15, 18 and 20c. for carnations is a little bit more than is wise to ask, particularly during the month of May. Very true, there were not enough to go around, but the buying public is in a criticizing mood and anything that savors of profiteering, regardless of whether their opinion is just or not, is sure to get severe treatment.

The present season is one full of difficulties for the grower of bedding stock. Everything is held back to the

point where a normal six weeks' business is going to be crowded into a much shorter time. This cold, late spring we are having is going to mean a big rush as soon as it opens up, and consequently it will be to the advantage of every grower handling bedding stock to be prepared for a big rush just as soon as the warm days come. There is a fine lot of stock available, but not a bit too much. I advise being prepared with a good, liberal quantity, and I predict a call that has never been beaten in bedding stock of all kinds.

Plant growers are making great preparations for next year. As I have said before, cyclamen will be heavily grown, and it is reasonably sure that the quality will be up to the standards of previous years.

Begonias are not over-plentiful;

that is, early stock. The medium-sized stock from late leaf cuttings followed up by later top cuttings will be in better supply, and of course this means 5 and 6 inch plants, which are always in good demand.

There doesn't seem to be any great quantity of Poinsettia stock, and everything that can be propagated of this plant will move quickly.

The call for field-grown hydrangeas in 5 and 6 inch sizes will be brisk and there will be a market for a heavy quantity of this stock.

From present indications it would seem that the plantsman can well afford to devote his time and energies particularly to such plants as above mentioned. Buying lilies at uncertain prices, with only one thing that is at all certain and that is a high price, is not very encouraging. This also applies to Dutch bulbs, and it will probably mean smaller plantings in consequence.

Hydrangea Madame Mouillere

One particular line of the trade that is fairly stable and easy to gauge is that of the rose growers. They are going along at an even pace. Plantings of young stock have been started along early, and the markets all through the country seem to be assured of an average supply of stock, and also with a very good selection of varieties. Ophelia, Columbia and Premier are sure to be plentiful. If I were to mention any one rose that may be in short supply, I would say that it would be white. We can more readily do without white of course than anything else, unless possibly the red varieties. It remains to be seen how such varieties as Dunlop, Pilgrim, Crusader and Madam Butterfly turn out for the growers, but they have been planted in good quantities and buyers are sure to have a fine selection to work on the coming season.

Large tubs of Hydrangeas are in demand. Any grower having stock that will be in bloom from the middle of June on will find a good market, and I would advise if you have any stock to hold them for that time rather than push them in early. The seashore resorts will need them and they will bring a good price. This of course is stock that must be shipped in wooden tubs. Pot stock is not large enough for that particular demand.

THE MARKET.

Reports on Mothers' Day business are somewhat varied. In Boston there was an excellent clean-up, although no great amount of special advertising had been indulged in. Prices remained firm and everything that was offered was taken quickly; as a matter of fact,

some of the growers did not bother to ship a great amount of carnations into Boston because they could sell this stock locally. Carnations led the list but other flowers were carried along with them, so that the market on the whole was very satisfactory. Naturally there was nothing in the market on the Monday following, and there has been a gradual falling off throughout the week. Now the market is very well supplied, with prices easy.

Roses are selling for from 6 to 12c., with higher prices for Beauties. Carnations vary considerably in quality and are selling for 8, 10 and 12c. Callas are now bringing \$1 to \$2, Lilies 6 and 10c., Sweet Peas 2 and 4c., with Snapdragon ranging from 50c. to \$3. Without any great demand for Marguerites, they are selling at 1c. Some very good tulips are coming in and the demand is good at 8 and 10c. Feverfew and Candytuft are beginning to appear and sell for about 75c. These figures represent a fair average for prices throughout the country. Of course the Mothers' week sales had different effects in different cities, according to the amount of stock left over.

According to reports from Philadelphia there was a slight advance in carnations but most other stocks kept on an even keel. The clean-up Saturday was very fair and would have been better if old Jupiter Pluvius had only kept away. Demand on most things was briskest for the shorter grades. Long-stemmed roses and other high-priced stock went rather slowly. It looks as if Mothers' Day is a long way off yet from becoming a Christmas festival in the floral world—at least here in Philadelphia. And anyhow, every day ought to be Mothers' Day—all the year round. Miss Jarvis seems to be taking herself too seriously.

BOSTON.

The regular meeting of the Boston Gardeners' & Florists' Club will be held Tuesday evening. Prof. Duchant will speak on "Service."

J. Newman & Sons, long located at 24 Tremont street, have moved to 225 Tremont street. Although the new quarters are slightly smaller, they are in a very convenient location and have been attractively fitted up.

Henry Penn has been honored by being elected a member of the Board of Governors of the Boston City Club. Mr. L. B. Brague of Hinsdale, Mass., the well known dealer in ferns, has been calling on the local trade. He reports more or less difficulty in shipments due to railroad troubles.

JAMES WHEELER

NATICK, MASS.

When writing to advertisers kindly mention HORTICULTURE

Little Talks on Advertising

Mr. P. C. McDonald is a widely known advertising man who had made a keen study of advertising methods as they apply to retailing. In a recent number of the Retail Public Ledger of Philadelphia, he made this statement:

"Small, unpretentious beginnings in an advertising way ultimately lead to increased space. The attempt to lead off with a big display is utterly fallacious and not justified by returns. The small, neat, well-thought-out, local advertisement, running at regular intervals, is a species of publicity that brings home the bacon, and builds a bigger, broader, better business."

I am sure that this advice applies with special emphasis to florists, and I would particularly recommend a second reading of that sentence which points out the desirability of running one's advertising at regular intervals. It is this constant pegging away which does the business. At the same time merely having one's name in the paper may not accomplish much unless the space used is filled with enticing and convincing copy.

In any event, it is very poor policy to plunge unless one has studied out his market and experimented a little with the best way to reach it. Three or four-inch advertisements, used two or three times a week for a while, may be followed by little larger copies if returns justify it. In any event this small space used regularly will bring much greater financial results than an occasional full page spread. This, it must be understood, is viewing the matter from the florist's standpoint and considering the kind of goods which he sells.

Mr. McDonald says further in his article:

"Let advertising develop a market for a commodity—it makes no difference what that commodity may be—and suddenly cease advertising for a season and you will find competitive articles taking advantage of the let-up, breaking heavier than ever into space and winning away that market."

The Ostrich Policy

"There's no theory about this argument—it's backed by numerous cases where this very thing has been done and done thoroughly. The undermined advertisers, feeling themselves slipping, have had to come back stronger than ever before to recover, in part, their lost prestige."

"I have often thought that the dealer who won't advertise because he feels he can't afford it, is burying his head in the sand, and therefore absolutely blind to his opportunities. He's

a derelict among dealers, simply hanging on and letting the makers of his wares fight the battle alone. If he grows he's in luck. If he fails he's getting what's coming to him—what he ought to have every reason for expecting. Once he takes newspaper space and is brought face to face with a realization that his stuff is moving faster, and his profits proportionately larger, then and then only, will he feel the power of the printed word—of worth-while and lucrative salesmanship.

"The dealer who makes up his mind right now that he's going to travel in fast company and multiply his sales and reduce his overhead by advertising is building for the future. Small beginnings make big endings, and never was this bromide more apropos than it is today. Small ads, kept before the public, will soon make a most perceptible bulge on the credit side of the ledger."

How It Works.

"Once you've started a campaign of advertising in your local newspapers, stick to it. Bear in mind advertising is cumulative, that it's like the proverbial snowball, gathering trade-impetus as it rolls along. Don't run one or two advertisements expecting big results and, not getting them, declare advertising doesn't pay."

"Continuity of small-space advertisements is what produces regular, gratifying volume. Spasmodic large space is too easily forgotten—it's too long between drinks. You can't hold the interest of your community by sporadic publicity any more than a novelist, no matter how great his reputation, can hold the interest of his following by publishing his latest yarn serially in semi-yearly installments."

HORTICULTURAL CLUB OF BOSTON

At the last meeting of the Boston Horticultural Club, at the Parker House, on Wednesday evening of last week, Professor E. H. Wilson, of the Arnold Arboretum, the president, was in the chair and introduced Mr. Fred Wilson, of Nahant, who gave an unusually interesting and valuable talk on perfumes, with special reference to the flowers from which they come. After that there was a general discussion lasting until 11 o'clock. Professor Pray, of Harvard College, had expected to be present to talk on landscape architecture, but on account of illness was unable to be present.

It was decided to hold a field day

shortly after Memorial Day, the exact date to be announced by President Wilson. This gathering will take place at the Arnold Arboretum, and Mr. Wilson will conduct the party through the grounds, pointing out the most interesting and valuable specimens of trees and shrubs to be found there.

SHORTIA GALACIFOLIA

Among the early spring wild flowers at Hillcrest, blossoming at the same time as the bloodroot and scilla, is the exquisite little shortia galacifolia native to the mountains of North Carolina. The dainty bell like blossoms on stems from two to three inches high grow above a tuft of reddish green leaves which have been above the ground all winter.

The leaves closely resemble those of the galax aphylla which are now so much used by florists for wreaths. The leaves have the same heavy veining, leathery texture and serrated edge. Both leaves have a beautiful lustre and the same rich shades of deep red and green. The Galax leaf is a little rounder and more pointed at the apex.

The Galax blossoms later than the Shortia bearing its flowers on stalks a foot high. The exquisite dainty bells of the shortia are about the size of a lady's thimble with a scalloped edge to its five white petals. The stems are pink and this year some of the flowers have assumed a rosy hue.

We grow it in the shade by our wood road in a well enriched wood soil with which peat or black muck from our meadow has been mixed. The heavy snows of this past winter seem to have agreed with it for the plants are in good condition this spring.

M. R. CASE.

Hillcrest, Weston, May 6, 1920.

NEW ENGLAND.

The Brainerd, Shaler and Hall Quarry Co. of Portland, has sold to A. N. Pierson, Inc., the florists of Cromwell, two tracts of land with buildings thereon, located in Cromwell.

The properties involved in the transfer have been leased by the Pierson Company for many years. A portion of the land is being used for coal storage purposes.

It is understood that John R. Barnes has retired from the firm of Barnes Bros., the well known nurserymen of Yalesville, Conn., and will no longer engage in business. He has bought a home in Wallingford, Conn.

HORTICULTURE

SUBSCRIPTION RATES:

One Year, in advance, \$1.00; To Foreign Countries, \$2.00; To Canada, \$1.50.

Entered as second-class matter December 3, 1904, at the Post Office at Boston, Mass., under the Act of Congress of March 3, 1897.

On another page appears an interesting article dealing with the registration of new plant varieties. This article was written by Miss Grace Sturtevant, of Wellesley Farms, Mass., a woman who has become famous as an Iris specialist, and especially in the hybridizing of this plant. For a long time the matter of protecting novelties has been discussed in the English trade press and among English gardeners. The matter has also been taken up in this country to some extent. In the American Rose Annual for 1920 Mr. J. Edward Moon, president of the American Association of Nurserymen, has a valuable contribution dealing with this subject. Mr. Moon, who as everybody knows is an active nurseryman in the third generation of successful work, has given much attention to this particular question, and has expressed to us much the same thought as that which he elaborates in the rose annual.

Mr. Moon points out that in almost any other line of work nobody would feel like producing an article that could not be protected by patent rights or at least secured by a trade mark. He feels that no astute business man would by an advertising appropriation back an unpatented, untrademarked, unsecured manufactured article of any kind. In the horticultural world nothing of this sort has ever been attempted, and it is common knowledge that men who have spent years and much money in bringing various new plants to successful development, have had to divide their profits with others who have obtained specimens of the new plants and propagated them so rapidly as to secure a stock early enough to be on the market almost coincident with that of the original. Many people in the trade believe that this is the chief factor in discouraging plant breeders from original work. On the other hand, there are those who claim that this is more of an excuse than any valid explanation. It depends largely upon the point of view.

Unfortunately Mr. Moon chose rather unwisely when he submitted Rosa Hugonis as a case in point. It would appear from his article that Rosa Hugonis was introduced to the trade through the Arnold Arboretum. As a matter of fact, the Conard & Jones Co., if we are correctly informed, obtained its stock from the Veitchs, the English

concern, and did so quite independently of the Arboretum. Of course other nurserymen were perfectly at liberty to follow their example.

Still, there seems to be much point to Mr. Moon's argument that if the originator or introducer of a novelty could sell exclusive rights of propagation to a given concern for a term of years, it would serve to stimulate the propagation and dissemination of worthy new things. It is a suggestion of Mr. Moon that the different concerns be allowed to bid on such novelties and secure the exclusive propagation rights for the ordinary patent term of seven-teen years. This, as he argues, would allow the purchaser an opportunity to secure the proper financing of the enterprise so that the plants could be put upon the market in great numbers, backed by adequate advertising, and given wide dissemination with reasonable assurance of getting back the sum total of the investment, with a fair degree of profit.

Unfortunately obstacles seem to come up when the details of this scheme are considered. That this plan or some similar one is simmering in the minds of many growers is evidenced from the article of Miss Sturtevant, who writes from quite a different angle from Mr. Moon, and yet with the same object in view. It will be noted that the newly formed Iris Society is likely to take up the question in an official way.

One useful tendency which is noted abroad and which might well be adopted in this country is the bracketing of breeders' names after the name of all novelties and newly introduced varieties. This in itself is a step in the right direction, and if the great army of amateur gardeners can be interested in the whole proposition, it is quite probable that some definite and workable scheme for the protection of the originators and propagators of new plants will be evolved.

Apropos of the above paragraphs we should like to say that it would be a splendid thing for horticulture in this country if those in the trade, as well as advanced ama-

teurs, would write more freely for the horticultural publications. In recent numbers of the English papers we find three well written contributions from American writers; the one from Miss Sturtevant is one, and another is that of Mr. B. Hammond Tracy, of Wenham, Mass., also reproduced in this issue. It seems to be quite the proper thing to send in gratuitous contributions to the English papers, setting forth one's point of view on various matters pertaining to plant growing. All sorts of discussions are carried on in the English trade press, ranging from those which have to do with the wages of gardeners to highly technical matters concerning rare plants. Now the number of similar contributions which come to publications of this country are very few in comparison, and they deal more largely with matters of business progress than anything else. Why is it that there isn't more general and hearty co-operation? The columns of our papers ought to be filled with letters or short articles taking up the different questions which are sure to be warmly discussed whenever a group of commercial growers or private gardeners get together. Such discussions are sure to be helpful and an opportunity is being missed because they are not indulged in more freely.

With flowers at their present prices it is wise economy to eliminate white carnations from the observance of Mother's Day, next Sunday. Mothers have other uses for their dollars now. Springfield Republican.

It will be news to many that mother is in the habit of buying her own flowers for Mothers' Day. Maybe the lad who wrote that paragraph is like a lot more of us who speak first and think afterwards.

CHICAGO FLORIST'S CLUB

The last meeting of the Chicago Florist's Club, which was held at the Randolph Hotel, Thursday, May 6, was called to order by President Waters.

Candidates elected to membership were Eric Paselk, Morton Grove, Illinois, office manager, Poehlmann Bros. Co.; L. A. Woodward, Chicago, Illinois, sales mgr. Lord & Burnham Co.

Nominations for membership were as follows: E. D. Burton, 900 Masonic Temple, Chicago, sales mgr., American Greenhouse Co.; H. E. Larson, 431 S. Dearborn St., Chicago, advertising expert, Florist Service Bureau; R. P. Bohlander, grower, Hillside, Illinois; Frank Psenicka, grower, Grosse Point, Illinois; Aram Mestjian, grower, Wilmette, Illinois.

Guy French stated that owing to the waiters strike the committee is obliged to postpone the May party for the present.

The Allied Floral Industries Association of Illinois extended verbal invitation to the Chicago Florist's Club to attend the meeting of this organization Thursday evening, May 13. It was duly moved and seconded that we accept this invitation, and that the members of the Chicago Florist's Club attend in a body.

Through the courtesy of American Greenhouse Mfg. Co., Wonderland Under Glass was again shown by request. Here are presented the first moving pictures ever taken of the manufacture and fabrication of greenhouses. E. D. Burton, sales manager of the Agmco Co., favored the audience with an interesting lecture in connection with these pictures.

It was pointed out that these films were produced at a cost of approximately \$3,500. Many additions are contemplated in connection with these pictures, in order that the films may become of a highly educational value. New scenes will be added, showing greenhouse operations, plant diseases, methods of cultivation, etc.

Florists Service Bureau

Owing to the inability of Mr. Hilmer Swenson to be present for this occasion, his assistant, Mr. H. E. Larson, was called upon to present the program advertised for the evening. Mr. Larson displayed the S. A. F. & O. H. movie "Her Birthday."

Plans had also been made to show the complete list of moving picture slides issued by the S. A. F. National Publicity Bureau, but these slides could not be located. Mr. Larson spoke on behalf of the S. A. F. Service Bureau and pointed out the necessity

GENERAL NEWS NOTES.

John F. Sabronsky, Kenton, Ohio, is to enlarge his greenhouses with the expectation of catering more largely to the wholesale trade. He is spending about fifteen thousand dollars in this way.

Thomas Bros., have established a new flower store on Polk street, in San Francisco. The same concern operated another store at the corner of O'Farrell and Jones street, which has been established for several years. Mr. M. Thomas will remain in charge of the old store while his brother, Mr. T. Thomas, will care for the new establishment.

Mrs. M. J. Ansbro is opening a new flower store at 1563 Polk street, San Francisco. Not long ago she purchased the store of Miss R. L. Murray on Geary street.

of the retailer to closely tie up with the dealer's helps in order to promote the florist business.

Advertising material, such as posters, bill boards, folders, stamps, moving picture slides, etc. will be especially prepared, embodying flower selling suggestions, short films will also be available which may be rented by retail florists.

A rising vote of thanks was extended to Mr. Larson and Mr. Burton for the excellent program prepared by these gentlemen.

There being no further business, the meeting adjourned.

F. LAUTENSCHLAGER, Sec'y.

The Galley Bros.' store on Genessee street, Buffalo, has been closed.

A new flower store has been opened on Main Street, Grand Junction, Colo., by J. W. Watson.

Flowers Under Glass

If your winter flowering marguerites have not been started, by all means get in a batch of cuttings right away. There is a never-failing demand for marguerites, especially in the larger cities, and wise florists know that they can grow them at a profit as prices run now. When kept shaded and moist for three or four weeks the cuttings root readily, and may then be potted up, using any good mixture, and placed in the full sun. Some growers prefer pot culture while others use field culture for marguerites. If they are grown in the field they should be lifted early in September and potted up with a rich compost.

There is commonly a good demand for lily of the valley in June, particularly for weddings, and as weddings promise to be numerous this June it will be a good plan to have plenty of valley on hand. A good way to grow them is in frames where they can be flowered in three or four weeks with a fair amount of bottom heat. This means a good layer of manure, with about six inches of sand over it. One good plan is to divide off the frames by partitions so that several different batches may be planted. They must be kept in the dark until the stalks are half grown when the light may be increased gradually.

One word of warning is necessary for those doing this work for the first time. There is danger of giving too much heat, with the result that the stalks become leggy. Do not give any overhead watering after the flowers begin to expand, for otherwise they may be spotted, although there is less danger now than in winter. When the flowers are about half out give them more ventilation and light so that they will start hardening up in good shape and at all times keep them moist at the roots.

It is easy to start allamandas from green wood cuttings, if they are placed on a propagating bench where they can have a little bottom heat. They also may be started in small pots plunged in a cutting bench and kept shaded until they root. The best soil for the pots is equal parts of sand and leaf mold. Gradually shift to larger pots and add more loam to the

soil. Some well rotted cow manure may also be added. Give them full sun and if necessary feed with liquid manure twice a week.

It pays to keep the roses well mulched at this time, especially in houses which are to be carried on for a little longer, but will be replanted in July. Well decayed cow manure makes the best mulch, as fresh manure would be too stimulating, resulting in the making of soft growth. This is a matter of importance because growth of this kind easily becomes subject to mildew. Do not put on all the mulch at once, but add additional material at intervals. It is best not to have the plants too dry when the manure is applied, and watering is required immediately, even though the time be late in the afternoon. Watering is needed to kill any heat that there may be in the manure, as well as to wash down the ammonia which would otherwise be lost. Roses respond differently to such applications of manure. Several of the kinds which grow very quickly, like Ophelia, Sunburst and Shawyer, give results which show very quickly, the difference in color being discernible in two or three days.

If you can't get cow manure, then do the next best thing and apply some such fertilizer as tankage, dried blood, sheep manure or bone meal, but handling them with care, for they are concentrated fertilizers. The only advice to be given is that the grower experiment with them a little at first. Growers sometimes think that they can get extra quick results by using nitrate of soda, but there is seldom a time when this fertilizer can be recommended. It is too rich in nitrogen, with the result that it causes soft growth and brings trouble to the grower.

Don't be in too much of a hurry to open the side ventilators in the rose house, even though the days begin to get warm. Mr. Arthur Ruzicka says that he never uses his side ventilators except when his houses are being planted, and for a while after, so as not to roast the young plants that have just been put in.

THE AMERICAN ROSE SOCIETY

An executive committee meeting of the American Rose Society was held at the City Club, New York City, April 22, 1920.

It was voted that the Society should publish an annual report to its members, giving the proceedings of the society for the year, with a list of its members, and other information covering the affiliation of local Rose Societies, rules governing amateur exhibitions, and the purposes for which the society's medals would be awarded.

It was voted that the Secretary be authorized to inform the English and French Rose Societies that the executive committee of the American Rose Society have approved withholding registration of American varieties until assured that the same name has not been registered abroad.

The president appointed the following honorary vice-presidents for the year 1920 and 1921: E. G. Hill, Richmond, Indiana; John Cook, Baltimore, Maryland; Captain George C. Thomas, Chestnut Hill, Pennsylvania, and Charles E. F. Gersdorff, Rosslyn, Virginia.

It was voted that a new scale be adopted for judging displays of cut roses as follows: artistic arrangement—40, quality of bloom—40, variety—20.

It was voted that the American Rose Society's Gold Medal be sent to the Portland Rose Society, to be awarded at their June meeting in compliance with the rules of the American Rose Society.

It was voted that the president be requested to send a letter of condolence to Benjamin Hammond on the death of Mrs. Hammond.

Dr. A. C. Beal, chairman of the Rose Test Garden Committee, made a report of various pilgrimages to be held during the spring of 1920. These are announced as follows: Washington, D. C., June 3; Hartford, Conn., June 24; Ithaca, New York, June 24; Portland, Oregon, June 25, and Minneapolis, Minnesota, July 3.

It was voted that the society should hold a general meeting at Washington at the time of the Garden Exhibition. It was voted that the president should present the Hubbard Gold Medal to E. G. Hill, at the June meeting in Washington, D. C.

The Secretary reported the total expenses on the society in connection with maintaining a booth in the International Flower Show, March 15 to March 21, 1920, to be \$151.25, and that 420 members availed themselves of

The new carnation which Hermann Schwarz of Central Park, L. I., exhibited at the International Flower Show, and which received a silver medal, has been named Siren.

It is understood that Frederick H. Ring, now located at Sanborn, N. Y., is planning to move to Detroit and engage in growing flowers on a much larger scale.

REGISTRATION OF NEW VARIETIES.

Suggestion by a Well Known New England Iris Grower.

The following appeared in the Gardener Chronicle of London:

Here in America, at least, the suggestion of plant patents seems impossible, and with the close contact of horticultural interests in the two countries, action in only one would be an insufficient protection. The matter of registration of new varieties is important, not only for the breeder, but for the amateur, who deserves to receive authoritative guidance in the maze of named varieties. There is no difficulty (for the English grower) in acquiring new plants, but it is only the conscientious breeder or introducer who offers such as are real improvements, and even he is open to error, so that control and regulation are desirable, to put it mildly. There should be a central authority with at least sufficient prestige to warn prospective purchasers, even though it possessed publicity alone as a measure of enforcement. The possibilities of actual publicity and what it might accomplish, I do not know, but recommendations of deserving firms, breeders or varieties are possible, and the undeserving might be listed for the benefit of members. The strength of such action, of course, depends upon the influence of the society in question; it gives a member the opportunity to act wisely. Would not such a proceeding be well within the scope of any society organized for the interests of any one genus of flower? I hope that this question will come up at the first meeting of the Iris Society in New York. Our plans attempt to make it of as much benefit to a member in California or London as in New York itself.

Another phase of the subject is the question of merit; in this respect there is often dissatisfaction with the present methods in making awards. I noted it in the comment on a National Rose Garden, and that is but one instance. Fundamentally the trouble seems to be that the highest awards are given to plants as they are exhibited, not as normally grown; or at times by incompetent judges.

If it were the custom to give only the lower awards at exhibitions and reserve the higher for those in garden tests, much of the difficulty would be overcome. Or, the honorary awards might be withheld and awards of value might be substituted to continue the interest in the production of new va-

rieties. As it is, we find that many count as valueless the awards of certain societies.

These are merely palliative measures, the fact remains that the breeder is after all dependent on himself alone; I see no other way out, and the following suggestions are of a similar character.

Messrs. R. Wallace & Co. do much (I give credit where credit is due) in bracketing the breeder's name after the name of the variety, and this custom is slowly spreading among other specialists of the Iris, but they have all been handicapped by lack of information as to the origin of many varieties. As with other flowers, a society may secure this information, and the custom will become more general. The establishment of a standard form of description and its use may well form a basis for registration through which a breeder can be informed of similarity to other varieties. This entails a full description, wherein the descriptive terms are clearly defined, and the placing thereof on record with a central body. As to discarding obsolete varieties, the symposium method seems adapted.

I also agree with Mr. Bliss that parcentage should be put on record, though it need not be published for a period of years. Its publication will assist other breeders; in Iris, at least, the originator has a long start of anyone who wishes to follow in his footsteps. In my work it is the untried field that allures; I delight in the uncertainty, the pleasure of anticipation, and I have such faith in the infinite possibilities of any but the most simple crosses that competition is but an added pleasure.—Grace Sturtevant, Wellesley Farms, Mass.

FLOWERTERIA PROVES POPULAR.

El Paso, Tex.—Letting the public make its own choice of flowers and pay for them by dropping coins in a box is being tried here.

A pergola, situated at one side of the store, has an overgrowth of crimson rambler with artificial vines, among which are dozens of small tubes filled with water containing roses and seasonal flowers. At the entrance to the pergola is a card which reads:

DON'T YOU WANT A BUTTON-HOLE OR CORSAGE BOUQUET?

Pick a rose or a cluster of them from our luxuriant shrubbery and place 25 cents in the coin box for each flower you take.

Naturally, theatregoers and others on pleasure bent can hardly resist the invitation to help themselves, with the result the coin box is laden down, not to mention the sales that take place after one enters the pergola and perceives the high-back stalls with glass-topped tables which hold tempting chocolates and bon-bons.

ORCHIDS

MANY PLANTS INJURED

Effects of the Severe Winter at the Arnold Arboretum.

The winter of 1919-20, although less destructive to plants in the neighborhood of Boston than that of 1917-18, has been exceptionally severe. Once in December, before the ground was protected by snow, the thermometer at the Arnold Arboretum fell to 12 degrees below zero; later heavy and numerous falls of snow buried and protected plants less than three or four feet high. Unfortunately the snow rested on a layer of ice which did not thaw until the disappearance of the snow at the end of March. This ice layer injured small plants, and this, or the cold nights in December, killed in the Nursery the seedling plants of *Juniperus Pinchotii*. This native of the Panhandle region of northwestern Texas is a handsome tree with bright red fruit. Recently introduced into gardens by the Arboretum, it was hoped that a tree

which grows naturally in a region of excessive winter cold would thrive in New England.

The heavy snow and high winds have broken the branches of several trees and shrubs, and the destruction of the fine species of the dwarf form of the Norway Maple (*Acer platanoides* var. *globosum*) by the weight of the snow on the branches is a serious loss. This plant was imported from Germany in 1888 and for several years has been an object of interest and curiosity to visitors to the Arboretum, especially those who like to study plants of abnormal growth; and its portrait has been thrown on the screen at many popular lectures on the Arboretum and its plants.

Field mice, which have destroyed during the winter by girdling thousands of young trees in New England orchards and nurseries, have done comparatively little damage in the Arboretum. A number of shrubs have lost branches; a ring of bark has been entirely removed from the stem of one of the three plants of a Chinese

Box Elder, *Acer griseum*, and this plant will probably not recover. Other interesting young trees which have been badly injured by mice are *Acer mandshuricum*, the great Box Elder of northern Korea and Manchuria and *Acer Davidii* from western China.

Rhododendrons, *Kalmias* and broad-leaved evergreens are generally in good condition, although the *Kalmias* which last year produced an unusually large crop of flowers this year are carrying few flower-buds. A few conifers have suffered, but the damage to these plants is less serious than it was two years ago, and, judging by reports from Long Island and the middle states, the Arboretum conifers have suffered less than those in some of the collections further south.

The young Cedars of Lebanon raised from seeds gathered in Asia Minor, and for many years believed to be proof against the rigors of the New England winter, have lost or will lose many leaves as they did for the first time two years ago. The buds appear to be uninjured and the

CASTORLAND

NEW YORK

trees will undoubtedly put out new leaves. Their spring beauty, however, is spoiled, and much losses of foliage will check their growth which up to two years ago had been more rapid than that of any other conifer in the collection.

Two years ago the numerous specimens in the Arboretum of the Black Pine of Japan (*Pinus Thunbergii*) lost much of their foliage and the trees look even worse now than they did two years ago. The buds are generally alive, but it will be a long time before these trees regain their former

vigor. This Black Pine is a southern sea-level tree and in this country is more picturesque than beautiful. In Tokyo, however, and by the sides of the great southern Japanese shore highway there are magnificent specimens. Raised at the Arboretum from seeds planted in 1893, *Pinus Thunbergii* was never injured here until the cold of the winter of 1917-18 ruined its foliage. The short-leaved southern Pine (*Pinus echinata*) has lost many leaves again as it did two years ago; and although this valuable tree finds its northern home on Staten

Island and Long Island, New York, it will probably never grow to a large size here or prove itself important for the decoration of northern parks. The oldest specimen in the collection was raised here in 1879 from seeds collected at the Peaks of Otter in Virginia and has suffered less than the younger trees raised from Staten Island seeds.

Young plants of the Mexican White Pine (*Pinus ayacahuite*) which have been growing in the Arboretum for several years and have not before been injured by cold look as if they had been browned by fire and will probably die. Small plants of *Abies magnifica*, the great Red Fir of the California Sierra Nevada, and *A. cephalonica* var. *Apollinis*, from south-eastern Europe, both trees of doubtful hardiness, are killed; and of the three trees of the California form of *Abies concolor* the *A. Lowiana* of English nurserymen and the *A. Parsonsii* of some American gardens, the leaves of two are for the first time badly browned, while those of the third are uninjured. Here and there a branch with brown leaves appears in the Pinetum, but on the whole the collection of conifers is in better condition than might have been expected.

Among the trees which do not grow naturally in New England three are now conspicuous by the freshness and beauty of their foliage; these three trees are the Hemlock from the high mountains of the Carolinas (*Tsuga caroliniana*), the Spruce-tree of the Balkan Peninsula (*Picea omorika*), and a Japanese Fir-tree, *Abies homolepis* (or *brachyphylla*). The last is a tree of dense habit, dark green leaves and purple cones; it must not be confused with another Japanese Fir-tree which botanists consider a variety of it and now call *A. homolepis* var. *umbellata*. This is a faster growing tree of open habit, with light green leaves and gray cones. It is less hardy than the typical form, and leaves on most of the specimens in the Arboretum have been browned during the past winter as they were two years ago. Except in general collections and as a curiosity this variety is not worth planting.

George Watson's Corner

"You in your small corner and me in mine."

Howard M. Earl one of the closest observers among well posted seedsmen in this country speaks very cheerfully of the seed situation at the present time, and is quite hopeful as to the final results when May and June business comes to be summed up. In a recent interview he was quite emphatic in stating that:

"Owing to the lateness of spring, and the awakening of the American people to a probable shortage of vegetables the coming season, May and June will be the banner months for the seed business this year. Present indications are that counter trade will be unusually heavy until real July weather sets in."

Wallace Pierson brought with him from Connecticut on his visit to the Quaker City last Tuesday a fine lot of the new white rose Mrs. John Cook which his firm is putting on the market this year. The exhibit was staged at the Florist Club meeting by the S. S. Pennock Co. and excited much favorable comment. It is certainly a magnificent flower. The writer had the good fortune to get a couple of blooms to take home to Lansdowne for Mother's Day and there was much rejoicing in that elegant borough among the ladies of his household and others. The bearer of that message from Cromwell was some hero just then.

GENERAL NEWS NOTES.

The Robert Craig Co., of Philadelphia, is planning to move its headquarters in July from 49th and Market streets to Norwood, which is about 18 miles from Philadelphia. The building which has been occupied so long has been sold. It is understood that the greenhouses at the same location will be sold, too.

John Weiland, of Chicago, has decided to adopt the Sunday closing rule. He says that his stores will not be open on the Sabbath after early June, notice to this effect being sent to his customers by means of cards enclosed with their orders.

The Ove Gnatt Co., is erecting a new plant at Evergreen, Ala., for the purpose of preparing magnolias.

GLADIOLUS COMBINATIONS.

Mr. B. Hammond Tracy Writes About Some of the Most Valuable and Most Beautiful Varieties.

The Horticultural Journal, of London, Eng., has an interesting letter in a recent number from Mr. B. Hammond Tracy, the well known gladiolus grower of Wenham, Mass., in which Mr. Tracy discusses several matters of interest to gladiolus growers, and to the trade in general. Among other things he says:

For several years fashion or vogue in flowers has been as pronounced as in clothes or furnishings. At Cedar Acres, the past season, purple and gold were in great demand.

Fortunately, in our borders we had plantings of purple and gold Gladioli with purple and gold Salpiglossis. At the base, to cover the earth and give added beauty, were carpets of purple Verbena, purple Phlox, blue-purple Petunias, and here and there a touch of pink Verbenas. Blue Salvia and gold Celosia were among the unusual things growing near standard Heliotrope. Rising in the background, green bushes of Buddleia were covered with fragrant trusses of lavender flowers.

In the show rooms these same colors found expression in harmonious arrangements, for by mere chance we were able to satisfy the demand by the use of flower containers in the same tints.

Gladiolus Amethyst, now a prime favorite, was used most effectively with Pink Perfection. We know of no flowers but tulip La Reve, and a few chrysanthemums, which have the coloring of Amethyst. The soft heliotrope, suffused rose, is always well placed when used with the creamy buff of Niagara or Loveliness. Amethyst or Prince of India with Baron Hulot make a truly Persian combination.

Gladiolus Mrs. Francis King, Liebesfeuer, Pink Perfection, Crimson Glow and Independence, glowing red and rose and pink, in stately four foot spikes, were quite the most glorious tribute to the gardener's art that ever went from our showrooms. They are equally gorgeous as a planting.

The exquisite coloring of White Glory with Baron Hulot is hard to describe. Chaste, cool and lovely, it needs only to be seen to be desired. Almost equally lovely is Iris Spray, the new lavender, with Daybreak, lovelier as it fades, or with the rich cream of Niagara.

The soft yellow of Yellow Prince and the clear iris blue of Jacinthe make a

most effective combination for vase or gift box.

Gladiolus Mrs. Dr. Norton is quite alone in its beauty. No other variety equals this in its class—silvery whiteness—with dainty touches on the tips of petals. It is more like a veiled silvery pink.

The Primulins Hybrids were increasingly beautiful and popular last year. The exquisite beauty of these Gladiolus butterflies is difficult to describe. In form and color no other flower quite equals them. Smaller than the other types of Gladioli, the daintiness of form and arrangement on the graceful spikes add to their decorative value. They are not found in many florists' shops, for they are not the "big pumpkins" demanded by those who want quantity. Yet they are the coming Gladioli. No two spikes of bloom are just alike and each seems more beautiful than the last. Colors ranging from the lightest primrose, through apricots, yellows, orange and bronze, to deep rich rose and reds, all placed together in one vase give a startling picture of nature's work of art.

We have as a basis for our unqualified praise of these Gladioli, the fact that almost every order for flowers or bulbs includes Primulins Hybrids. They are, without question, unequalled for forcing.

The small blooms of the Primulins specie, just as it grows in South Africa, are now in great demand and large plantings are made in the cutting garden, or in clumps in the hardy borders. These are quite the daintiest yellow blooms obtainable in mid-summer.

In buying bulbs, do not always select the largest bulbs. You lose the cream of the stock offered. Many of the choicest varieties do not produce large bulbs; the large bulbs may prove to be "blind," past blooming age. Size is not virtue, but it is essential that the bulbs should be of blooming age, fully developed and healthy, rather than large and overgrown, punky and soft.

B. HAMMOND TRACY.

Sahle Brothers have just completed extensive additions to their greenhouses on Newton street, Freedonia, N. Y., making their plant one of the largest in the Northern Chautauqua section.

The greenhouse controlled by Mrs. E. M. Welsh, on Annawam St., in Hartford, Ct., has been sold and Mrs. Welsh will now give her attention to a new store in the Aloin House.

Geo. Kessen, for some time connected with the Avondale Flower Co., has now gone with H. W. Sheppard, of Cincinnati, Ohio.

**LABOR QUESTION UPPERMOST.**

Discussed at the Gardeners' Confer-
ence in Boston.

There was a well attended gather-
ing of gardeners at the conference,
held on Thursday evening, May 6th, in
Horticultural Hall, under the auspices
of the Boston members of the Na-
tional Association of Gardeners. Rob-
ert Cameron acted as chairman of the
meeting.

The discussion centered chiefly on
the labor problem and how it affects
the country estates, and on the inabil-
ity to secure skilled help. It was
pointed out that in many instances the
ordinary laborer is receiving more
compensation for his eight or nine
hours a day work on the estates than
the superintendent who employs him,
while it is almost impossible to secure
assistant gardeners as they have been
attracted to other industries where
the compensation is better and the
hours of work less.

How to interest the young men in
the profession of gardening was a
much debated question with no prac-
tical solution forthcoming. The Sec-
retary of the National Association of
Gardeners who was present reported
that the committee which has this
matter in hand is about to present
the advantages that the gardening
profession offers to young men to the
educational sources of the country to
have them bring the opportunity to
the attention of the boys about to
leave school, to whom the call of the
great outdoors may be more enticing
than the office or the shop. Some of
the gardeners told of young men who
wanted to train for the gardening
profession. While some of them man-
ifested keen interest in the work,
others, finding it too arduous, soon
dropped out. This, however, holds
true with any vocation.

W. N. Craig was asked to tell of his
attendance at the annual meeting of
the Garden Club of America, which he
addressed in New York City last
March. He reported that the ladies
were very much interested in the wel-
fare of the professional gardeners, and
that they are in sympathy with his
viewpoint on the subject. Mr. Craig
warned that he found the members of
the Garden Club unusually well in-
formed on gardening and on the com-
mon and the rare inhabitants of the
garden.

Mr. Cameron related his experience
with the farmerettes, which are regu-
larly employed on the estate of which
he is in charge. He said that while at
first he did not favor the idea, he has
been compelled to change his views,

LEMON OIL COMPANY

Dept. S. 420 W. Lexington St., Baltimore, Md.

for the young women take great interest in their work and are steady workers. Mr. Cameron recommended that where there is help shortage and it is possible to secure farmerettes, they be given a fair trial.

A lively discussion on what constitutes proper compensation for employees on country estates was carried on between Messrs. D. Finlayson, J. Methven, A. K. Rogers, W. N. Craig, and J. Donald. This revealed that conditions are not alike on any two estates, and that country estates as a rule are self-governed. A suggestion that a uniform schedule might be of some advantage was promptly tabled as having a tendency towards unionism, to which the professional gardener, as indicated by the attitude of those present, is decidedly opposed.

The resolution of the Massachusetts Horticultural Society to have a meeting of all horticultural organizations at an early date to adopt some plan of action to bring about a modification of Quarantine Bill No. 37 was endorsed by the conference.

GENERAL NEWS.

The Everygreen Flower Shop is a new enterprise at New Brunswick, N. J. J. Fred Hoehn and Thomas J. Fitzgerald are the proprietors.

Ben Gruber is now the sole owner of the Hundertmark Flower Shop, 589 Main avenue, adjoining the People's Bank Building, Passaic, N. J. Mr. Gruber bought out the interest of Jack Braunstein. This is the third sale of the shop in the last two months. Harry Simon originally bought the place from William L. Hundertmark. Then Mr. Simon sold to Messrs. Gruber and Braunstein jointly.

I. Subin and H. Boverman, proprietors of a florist shop at 6003 Market street, Philadelphia, were awarded \$1,200 damages yesterday against their former landlord, T. Reese Howard who, it was alleged, illegally ejected the plaintiffs from their store.

Every Reader of "Horticulture" Needs
DR. L. H. BAILEY'S BRAND NEW
Standard Cyclopedia of Horticulture

Six large quarto volumes. More than 3,600 pages. 34 full page exquisite color plates. 96 beautiful full page halftones. More than 4,000 text engravings. 500 Collaborators. Approximately 4,000 genera, 20,000 species and 40,000 plant names

THE New Standard Cyclopedia of Horticulture has been freshly written in the light of the most recent research and experience. It is the fullest, the newest, the most authoritative of all works of its kind and constitutes the most conscientious attempt that has ever been made to compress the whole story of our horticultural thought, learning and achievement into one set of books. It is both an Encyclopedia and a Manual.

A Few of the Many Important New Features

Key to Identification of Plants This is a device to enable one to find the name of a plant. The name thus found is quickly referred to under its alphabetical location, where full information will be found in regard to it.

Synopsis of Plant Kingdom This is one of the most important features of the new edition. It constitutes a general running account of the classes, orders, and groups of plants, with a brief sketch or characterization of 215 of the leading families comprising those that yield practically all the cultivated plants. These family descriptions give the botanical characters; the number of genera and species and the ranges; a list of the important genera; brief statements in regard to the useful plants; and diagrammatic illustrations.

Illustrations There are 24 colored plates; 96 full page halftones; and more than 4,000 engravings which serve as guides in the text.

The Glossary This is an analysis of all technical terms that are used in the work and in similar works. It comprises botanical and horticultural terms with brief definitions.

Translation and Pronunciation of Latin Names In Volume I is inserted a list of between 2,000 and 3,000 Latin words used as species—names of plants, giving the English equivalent or translation and the pronunciation.

Class Articles Special effort has been made to secure the best cultural advices for the plants requiring peculiar or particular handling. Here are some of the titles of these articles: Ants; Autumn Gardening; Bedding; Diseases; Drainage; Floral Designs; Formal Gardening; Hotbeds and Coldframes; Insects; Landscape Gardening; Lawn Planting; Orchards; Rock Gardening; Subtropical Gardening; Tools and Implements; Village Improvements; Window Boxes, etc.

General Index The final volume contains a complete index to the entire work, enabling the reader to locate volume and page of any subject he has in mind.

The complete set of six volumes, bound in decorated buckram, will be delivered to you for only \$6 down and \$6 a month for 6 months, until the full amount of \$42 has been paid. Cash price \$41.

Further Particulars Sent on Request

HORTICULTURE, 78 Devonshire St., BOSTON, MASS.

Principles and Practice of Pruning

By M. G. KAINS

Lecturer on Horticulture, Columbia University

Few practices in the handling of plants, especially fruit bearing plants, attract so much interest as do those of pruning. The methods are so varied, the results so diverse, and the opinions of growers so apparently contradictory that this subject is always one of the most interesting, and the surest to hold attention and arouse discussion.

Particularly during the last ten or fifteen years when the principles of plant physiology have been more and more satisfactorily applied to plant production and management has interest settled in pruning. During the latter half of this time also more and more investigations and tests have been conducted by experiment stations and other workers to test out methods and principles in the interest of science and for the benefit of growers. The accumulation of such new knowledge has become very considerable especially in the last decade, but it is necessarily so scattered that very few growers have access to it, hence the demand for a book, which shall present the really important features of these investigations as well as set forth the fundamental principles based upon the laws of plant growth.

This volume is lavishly illustrated mainly by actual photographs of specimens which show good and bad practices. The author has spared neither time nor expense in gathering his photographs, each one of which tells its story.

After a few pages of introduction the author discusses Plant Physiology as related to pruning. A chapter takes up the Philosophy of Pruning, itself a very interesting subject. Then follows a classification and clear discussion of Buds, very fully illustrated from life. How Wounds Heal is an exceedingly interesting chapter, as are also those on Prevention and Repair of Mechanical Injuries, Pruning Nursery Stock, Young Trees, Mature Trees and Odd Methods of Pruning and Training, Rejuvenating Neglected Trees and Practical Tree Surgery.

Profusely illustrated. 400 pages. 5½ x 8 inches.

Cloth. Net, \$2.00.
